Summary |

Pursuant to S.C. Code Sections 13-7-40 et seq., the Department is responsible for regulatory and licensing standards, disposal, use, reports, storage, and inspections relating to various uses of radioactive materials. The Department proposes amending R.61-63 to incorporate federal law as required to maintain South Carolina's status with the United States Nuclear Regulatory Commission ("NRC") as an Agreement State.

The Administrative Procedures Act, S.C. Code Section 1-23-120(H)(1), exempts these amendments from General Assembly review, as the Department proposes these amendments for compliance with federal law.
