Fax: (803) 898-3661

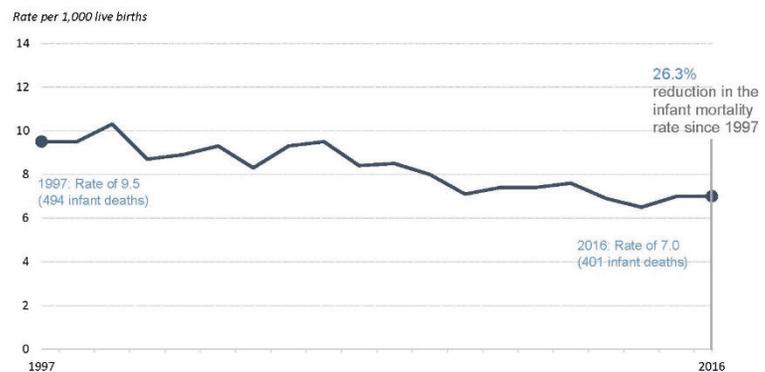

Executive Summary

Infant mortality is the death of an infant before his or her first birthday. Determining the infant mortality rate (IMR) gives us valuable information about the condition of maternal and infant health in our state. The infant mortality rate is considered a benchmark for the overall health of society.

Infant mortality is a cause of great concern for states, the nation, and the world. Its impact on families and society is profound. The South Carolina (S.C.) Department of Health and Environmental Control (DHEC) collects infant mortality data as a way to measure the health of infants and their mothers across the state. Over the past 20 years alone, the IMR in S.C. has decreased by 26.3% (see Table 1 and Figure below). Though we have made significant strides in the promotion of women's health and infant health before, during, and after pregnancy, S.C.'s IMR remains higher than the U.S. rate of 5.9 deaths per 1000 live births.¹ The 2016 infant mortality rate in S.C. did not change from 2015 and remains at 7.0 infant deaths per 1,000 live births, though S.C. did have four fewer deaths from the previous year (see Table 1). While the infant mortality rate among black and other minorities infants remains higher than that of white infants (see Table 3), that rate has declined 39% since 1999.²

Trend in Infant Mortality: 1997-2016

According to the data in this report, the leading causes of infant deaths in S.C. continue to be birth defects, disorders related to low birth weight and preterm birth, Sudden Infant Death Syndrome, and accidents (see Table 8). Sleep-related infant deaths, or Sudden Unexplained Infant Deaths (SUIDs) are those due to accidental suffocation and strangulation in bed, SIDS, or other undetermined and ill-defined causes. From 2015 to 2016, the number of deaths due to preterm birth/low birth weight decreased by 27.8% while deaths due to birth defects increased by 18.1% (see Table 8c). The number of sleep-related deaths decreased by 9% from 78 in 2015 to 71 in 2016 (see Table 10).

¹ Xu, J, Murphy, S.L., Kochanek, K.D., Arias, E (2017) Mortality in the United States, 2015, *NCHS Data Brief No. 267*, December 2016.

² South Carolina Department of Health and Environmental Control: SC Community Access Network (SCAN), <http://scangis.dhec.sc.gov/scan/index.aspx>, accessed on October 26, 2017.

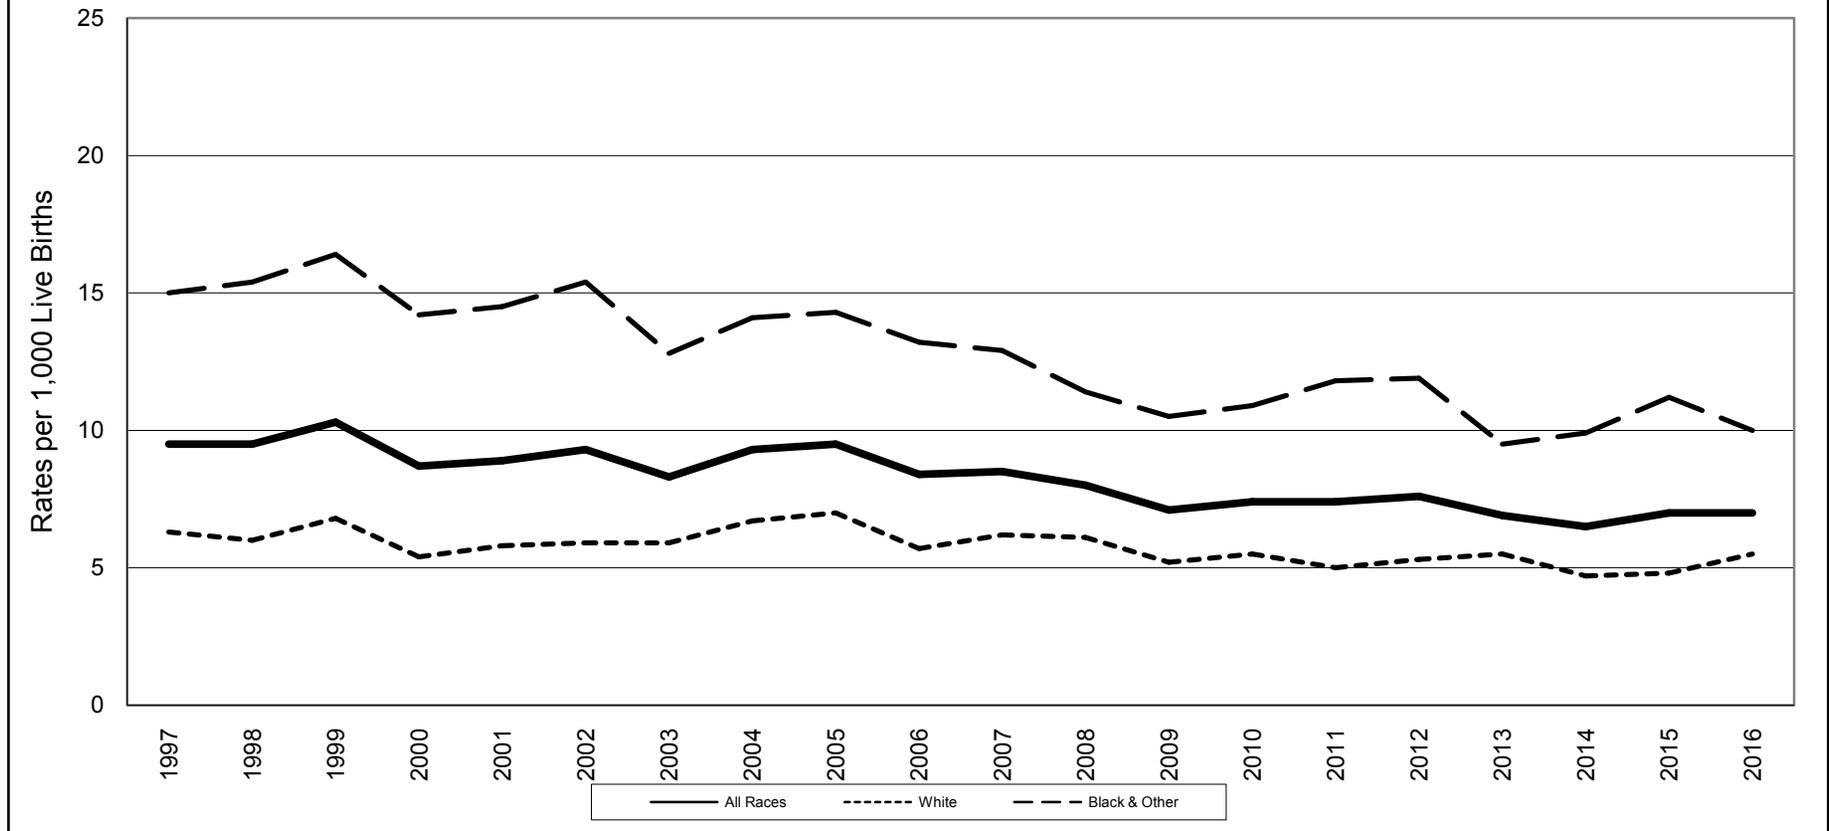

In S.C. from 2015 to 2016, there was significant improvement in several risk factors associated with poor pregnancy and maternal outcomes. The percent of births to teens and percent of tobacco use during pregnancy decreased significantly during this time period (see Table 12). Further, there was a significant decrease in the percent of inadequate prenatal care and a significant increase in the percent of early entry into prenatal care among Black and Other mothers. The disparity ratio in infant mortality rates among mothers of minority race, relative to their white counterparts, decreased from 2.0 in 2015 to 1.3 in 2016 for babies with a normal birth weight (see Table 14).

DHEC remains steadfast in its commitment to the promotion of women's health and infant health before, during, and after pregnancy. The agency continues to work with partners, like the S.C. Hospital Association, S.C. Department of Health and Human Services (DHHS), the March of Dimes South Carolina Chapter and others to institute strategies that allow us to help improve the health of moms and babies in South Carolina.

Two state-level efforts addressing infant mortality are DHEC's Healthy Mothers, Healthy Babies (HMHB) Plan for Reducing Infant Mortality in South Carolina and the Birth Outcomes Initiative (BOI) led by DHHS. Our state is also participating in Collaborative Improvement and Innovation Networks (COIIN) convened by the federal government to address interconception care, perinatal regionalization, smoking cessation, early elective deliveries, and the promotion of safe sleep practices.

Other practices and programs that are being utilized in the fight against infant mortality include: hospital and physician emphasis on patient quality and safety; evidence-based maternal and infant home visitation programs; postpartum newborn home visits; March of Dimes funding, research, and education; and the S.C. Birth Defects Program. All who are engaged in this work are determined to give every child in South Carolina the best chance for a happy and productive life.
