McCormick County
Cancer Profile

March 2021

What Is Cancer?

Cancer is not one disease, but a group of diseases. For example, lung cancer is a completely different disease than colorectal cancer. All cancers have one thing in common, they can grow and spread uncontrollably if not diagnosed at an early stage and properly treated.

Cancer is caused by many things, like smoking, poor diet, and/or family history. The greatest risk factor for any cancer is increasing age. The risk of getting cancer increases with age. The risk of developing cancer differs for men and women. In the United States, one out of two men and one out of three women will have cancer in his or her lifetime.

What Is Cancer Incidence?

Cancer *incidence* is a measure of how many *new cancer cases* occurred in a certain period of time. A cancer *incidence rate* tells how many cancers were diagnosed per 100,000 people in the population. (For example, a cancer incidence rate of 400 means that for every 100,000 people, 400 were diagnosed with cancer).

Incidence rates can be *age-adjusted*, meaning that the age structure of the population is taken into account when rates are calculated. Adjusting for age allows us to compare rates by removing differences in the age structure among different populations. Incidence rates shown below are age-adjusted to the 2000 US standard population.

What Is Cancer Mortality?

Cancer *mortality* is a measure of how many *cancer deaths* occurred in a certain period of time. A cancer *mortality rate* tells how many people died from cancer per 100,000 people in the population. (For example, a cancer mortality rate of 150 means that for every 100,000 people in the population, 150 died from cancer).

Cancer mortality rates can also be *age-adjusted*, taking into account the age structure of the population. Mortality rates shown below are age-adjusted to the 2000 US standard population.

Impact of Cancer: US, SC, and SC County

The American Cancer Society (ACS) estimates that 1,898,160 new cases of cancer will be diagnosed in the United States in 2021. This translates to 5,200 new diagnoses each day. Furthermore, an estimated 608,570 people in the United States are expected to die from cancer in 2021.

In South Carolina, ACS estimates 33,030 new cases of cancer will be diagnosed in 2021 or over 90 new cancer cases diagnosed each day, while an estimated 10,940 South Carolinians will die from cancer in 2021. The four most common cancers in SC are cancers of the lung, breast (female), prostate, and colon/rectum. The four leading cancer causes of death in SC are lung, colon/rectum, breast (female), and pancreas.

Tables 1 through 4 below show the number of new cancer cases and deaths for McCormick County, including age-adjusted rates for cancers in the county and for the state of SC. The last column in each table shows how the county ranks in comparison to the other 45 SC counties. A rank of 1 means that a county has the highest rate of any county, while a rank of 46 means that a county has the lowest rate of any SC county. *At this time, the most recent cancer statistics for South Carolina and the United States are for new cases diagnosed in 2018. Deaths occurring in 2018 are also used.*

Table 1 shows 5-year cancer incidence data for McCormick County and SC for all cancers by sex and race, including McCormick County's rank in SC compared to all other SC counties.

Table 1. Cancer Incidence by Sex and Race, 2014-2018, McCormick County and South Carolina*

	SC	McCormick County		
	5-year rate	5-year rate	new cases*	SC rank
all	450	457	86	20
male	503	502	49	24
female	411	434	37	6
white	452	458	57	23
black	441	458	29	18

***Counts are annual averages based on 5 years of data.** 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 2 shows 5-year cancer mortality data for McCormick County and SC for all cancers by sex and race, including McCormick County's rank in SC compared to all other SC counties.

Table 2. Cancer Mortality by Sex and Race, 2014-2018, McCormick County and South Carolina*

	SC	McCormick County		
	5-year rate	5-year rate	lives lost*	SC rank
all	165	154	31	41
male	203	163	17	44
female	137	150	15	13
white	160	130	19	44
black	185	192	12	20

***Counts are annual averages based on 5 years of data.** 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 3 shows 5-year cancer incidence data for McCormick County and SC for selected cancers, including McCormick County's rank in SC compared to all other SC counties.

Table 3. Cancer Incidence for Selected Cancers, 2014-2018, McCormick County and South Carolina*

	SC	McCormick County		
cancer	5-year rate	5-year rate	new cases*	SC rank
breast (female)	130	153	12	2
prostate (male)	113	127	14	13
lung/ bronchus	63	65	14	30
colon/ rectum	38	44	8	15
pancreas	14	~	2	43

***Counts are annual averages based on 5 years of data.** 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 4 shows 5-year cancer mortality data for McCormick County and SC for selected cancers, including McCormick County's rank in SC compared to all other SC counties.

Table 4. Cancer Mortality for Selected Cancers, 2014-2018, McCormick County and South Carolina*

	SC	McCormick County		
cancer	5-year rate	5-year rate	lives lost*	SC rank
breast (female)	22	~	2	12
prostate (male)	22	~	1	46
lung/ bronchus	43	44	9	27
colon/ rectum	14	~	3	17
pancreas	11	~	1	42

***Counts are annual averages based on 5 years of data.** 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 5 shows the percentage of cancers diagnosed in early and late stages of disease in McCormick County and SC. Cancers diagnosed in late stages lessen the potential for successful treatment and raise the risk of premature loss of life.

Table 5. All Cancers by Stage of Diagnosis, 2014-2018, McCormick County and South Carolina*

	SC	McCormick County
	Percent of all cancers	Percent of all cancers
Early Stage	48.4	43.6
Late Stage	40.2	39.7
Unknown Stage	11.3	16.7

*Percents (proportions) shown are (rounded) based on 5 years of data. Statistics include *in situ* cancers.
Source: SC Central Cancer Registry.

Breast Cancer in McCormick County

Among women, breast cancer was the number 1 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2014-2018. For this 5-year period, there was an annual average of 12 new female breast cancer cases diagnosed and 2 deaths from this disease.

Prostate Cancer in McCormick County

Among men, prostate cancer was the number 1 most commonly diagnosed cancer and the number 6 leading cause of cancer death from 2014-2018. For this 5-year period, there was an annual average of 14 new prostate cancer cases diagnosed and 1 deaths from this disease.

Lung Cancer in McCormick County

Lung Cancer was the number 1 most commonly diagnosed cancer and the number 1 leading cause of cancer death from 2014-2018. For this 5-year period, there was an annual average of 14 new lung cancer cases diagnosed and 9 deaths from this disease.

Colorectal Cancer in McCormick County

Colorectal cancer was the number 4 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2014-2018. For this 5-year period, there was an annual average of 8 new colorectal cancer cases diagnosed and 3 deaths from this disease.

Pancreatic Cancer in McCormick County

Pancreatic cancer was the number 11 most commonly diagnosed cancer and the number 5 leading cause of cancer death from 2014-2018. For this 5-year period, there was an annual average of 2 new pancreatic cancer cases diagnosed and 1 deaths from this disease.

Screening

Men and women should speak with their doctor about the pros and cons of screening and to determine their level of risk.

The Best Chance Network (BCN) provides breast cancer screenings (ages 30-64) and cervical cancer screenings (ages 21-64) for women with incomes at or below 250% of the federal poverty level, screening thousands of women each year. For more information see: http://www.scdhec.gov/Health/DiseasesandConditions/Cancer/FreeCancerScreenings/

Notes: Data are subject to change as data sets are updated. Rates are per 100,000 and age-adjusted to the 2000 U.S. standard population. Statistics do not include *in situ* cancers, except for bladder. The following suppression rules may have been applied to the data in the text and tables above: counts of 1-4 are recorded as less than 5; counts of 5-9 are rounded to 10. Rates based on counts fewer than 16 are suppressed (~).
