Introduction

This is the sixth volume in a series of teen pregnancy data books produced by the South Carolina Department of Health and Environmental Control (SCDHEC). Teen pregnancy events in the lives of South Carolina residents over the past decade are documented in this current volume.

Since 1994, SC teen pregnancy data has been presented for four commonly requested age groups of adolescents: 10-14, 15-17, 18-19 and the traditional 14-17.

The Office of Public Health Statistics and Information Services (PHSIS) collects data on reported to SCDHEC; therefore, presented statistics should be representative of live births, abortions, and fetal deaths that occur in the lives of SC residents.

In this report, estimated pregnancies are defined as the number of live births plus the number of abortions plus the number of fetal deaths.

Estimated pregnancies = live births + abortions + fetal deaths

Fetal deaths are defined as fetal deaths that meet the criteria of 20⁺ weeks gestation (length of pregnancy) and/or fetal weight of 350⁺ grams.

Fetal death = 20⁺ weeks gestation and/or
Fetal death = fetal weight of 350⁺ grams

The Office of Research and Statistical Services (ORSS) provides population estimates. These estimates are computed from information available to ORSS; intercensal population (1988-1989,91-98) should be recognized as estimates. The 1990 population is directly from census data. Rates published in this volume may differ from previous reports due to revised population estimates.

Definition of Terms

Abortion: Purposeful termination of pregnancy with intention other than to produce a live born infant or to remove a dead fetus.

Age of Mother: The age of the mother in years at her last birthday.

Estimated Pregnancy: The number of live births plus the number of abortions plus the number of fetal deaths.

Fetal Deaths: Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles. A fetal death is required to be reported if the fetus has completed the twentieth week or more of gestation or weighs 350 grams or more. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Live Birth: The complete expulsion or extraction of a product of human conception from its mother, irrespective of the duration of pregnancy, which after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Marital Status:

Unmarried - a woman who has never been married or who has been widowed or legally divorced in excess of 280 days.

Married - A woman who is married or has been married within 280 days from conception.

Paternity Acknowledgement - gives authorization to list the name of the father and mother by means of an affidavit as required by South Carolina Law, Section 44-63-165. For statistical purposes, paternity acknowledgements are included in the married category.

Residence Data: Data allocated to the place in South Carolina where the person normally resides, regardless of where the event occurred.

Estimated Pregnancy Rates

$$\frac{\text{Number of pregnancies (specific age group)}}{\text{Total population of girls (specific age group)}} \times 1000$$

Live Birth Rate

$$\frac{\text{Number of live births (specific age group)}}{\text{Total population of girls (specific age group)}} \times 1000$$

Abortion Rates

$$\frac{\text{Number of abortions (specific age group)}}{\text{Total population of girls (specific age group)}} \times 1000$$

Fetal Death Rates

$$\frac{\text{Number of fetal deaths (specific age groups)}}{\text{Total number of live births plus number of fetal deaths (specific age group)}} \times 1000$$

Percent of Births to Unmarried Girls

$$\frac{\text{Number of live births to unmarried girls (specific age group)}}{\text{Total number of live births to girls (specific age group)}} \times 100$$

Interpretation of Data

Rate Calculations With Small Numbers: There are variations in all statistics which are the result of chance. This characteristic is of particular importance in classifications with small numbers of events where small variations are proportionately large in relation to the base figure.

Race: Information on race of the mother and father is reported on birth and fetal death certificates, and the race of the woman is reported on the abortion form. For statistical purposes, the tables in this report are based on the classification of "White" and "Black and Other". Blacks currently make up 97.3 percent of Black and Other Population of South Carolina.

Information on race used in this report utilizes the race of the child for births in the years 1985-1989. To be consistent with National Center for Health Statistics and with other states, the Office of Public Health Statistics and Information Systems of the South Carolina Department of Health and Environmental Control began utilizing the race of the mother for births in 1990. Abortions and fetal deaths are characterized by the race of the woman for all reported years.

Fetal Death Rates: Beginning in 1993, the fetal death rate calculations were changed to the formula recommended by NCHS which includes fetal deaths plus live births in the denominator. Due to this change, the rates reported in this series will not be identical or comparable to rates reported in past years.
