**Re: Supplemental Soil Assessment Report Former TCE AST
Honea Path Plant (BLWM ID# 400238)
415 Brick Mill Road, Honea Path, South Carolina
AEM Project No. 1320-1702**

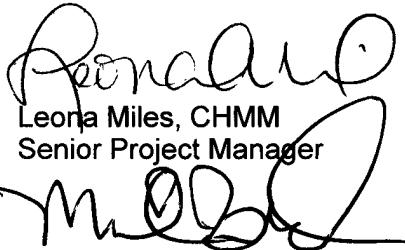

Dear Ms. Trent:

On behalf of Ingersoll Rand, please find enclosed one electronic copy (on computer disc) and one hardcopy of the Supplemental Soil Assessment Report—Former TCE AST located at the Ingersoll Rand facility in Honea Path, South Carolina.

If you need anything else or have any questions, please call us at 404-329-9006.

Sincerely,

Atlanta Environmental Management, Inc.

SECTION 1.0 INTRODUCTION

This *Supplemental Soil Assessment Report—Former TCE AST* has been prepared in response to the South Carolina Department of Health and Environmental Control (DHEC) request for additional soil assessment to further define the extent of impacted soil near a former trichloroethene (TCE) aboveground storage tank (AST) located at the Honea Path Plant (see Attachment A). This soil assessment was performed in accordance with the *Soil Assessment Work Plan Addendum—TCE AST Pad*, dated May 30, 2017. The work plan addendum was approved by DHEC in correspondence dated June 30, 2017 (see Attachment A).

Soil sampling activities were performed on behalf of Ingersoll Rand Company by Atlanta Environmental Management, Inc. (AEM) on July 27, 2017. Soil boring and sampling procedures, sample handling and chain-of-custody procedures, laboratory analytical and quality control procedures, data documentation procedures, waste management procedures, decontamination procedures, and borehole abandonment procedures are discussed in this report.

1.1 SITE DESCRIPTION

The Honea Path Plant is located on approximately 466 acres in a semi-rural area typically composed of woods and farm land at 415 Brick Mill Road, Honea Path, South Carolina (see Figure 1). The facility consists of a main manufacturing building, a smaller storage building to the rear of the plant, and a small wastewater treatment plant located northeast of the main plant building. Topographic features include the gullies and intermittent drainage features located on the northeastern, northern, and northwestern property boundaries (see Figure 2).

Two former TCE ASTs have been used at the facility. The original TCE AST was located near the northern corner of the main plant building adjacent to a former methanol AST along the back-fence line within an unpaved area (see Figure 2). The TCE and methanol ASTs were removed in 1989. The TCE AST was then moved to the current AST tank farm until TCE was no longer used at the plant in 1992.

1.2 BACKGROUND

TCE was historically used in vapor degreasers at the plant until 1992 when company policy mandated that volatile organic compounds (VOCs) no longer be used at the plant. Raw TCE was received in bulk and stored in an AST. The material was then pumped from the AST to the degreasers via an underground pipeline. The degreasers were equipped with solvent recovery stills, which required periodic cleaning. The still contents were drummed and shipped off site for disposal. Waste TCE was collected in an underground storage tank (UST), which was removed in 1985 (Advent, 1995). The underground waste pipe tested tight during the UST closure and soil samples collected from the UST excavation did not contain detectable TCE.

As noted above, TCE has historically been stored in two ASTs at the plant. The original TCE AST was located adjacent to a former methanol AST along the back-fence line and was not equipped with secondary containment (see Figure 2). No TCE spills were reported or known near the original TCE AST. The underground piping for the original TCE AST was not tested when the AST was moved to the current tank farm in 1989. A methanol release was reported in October 1989 near the former TCE and Methanol ASTs and impacted soil was excavated in this area for on-site treatment using a mobile thermal unit.

TCE and other hazardous constituents were identified in groundwater and surface water at the facility in 1990. The focus of the initial work conducted at the facility was groundwater plume delineation and control as opposed to delineation of potential source areas. This strategy was effective and has resulted in a robust remediation system that was designed to contain known release areas onsite.

Three phases of soil investigation have previously been conducted at the plant. Advent collected soil samples in 1993, Sanborn, Head & Associates (SHA) collected soil samples in 2006, and AEM collected soil samples in 2016. These investigations are briefly summarized below.

Advent investigated nine potential source areas in 1993. Soil boring locations from this investigation (A1SB1, A1SB2, A2SB1, A2SB2, A3SB1, A3SB2, A4SB1, A5SB1, A5SB2, A6SB1, A7SB1, A7SB2, A8SB1, and A9SB1) are shown on Figure 3. One boring soil sample from each of the 9 potential source areas was submitted for laboratory analyses by Advent (Advent, 1995). Most of the samples were collected from a depth of two to three feet below land surface (bls). The only VOC reported in the soil samples was methylene chloride, which is a common laboratory sample contaminant.

As part of the Advent investigation, soil boring sample A4SB1 was collected near the former TCE and Methanol ASTs. Methylene chloride was the only VOC present in this soil sample. As noted above, soil impacted by a methanol release in this area was excavated and treated on-site using a mobile thermal unit in 1989.

In 2006, SHA collected additional soil samples as part of a Phase I/II assessment (SHA, 2006). Soil boring locations from this investigation (SH-01, -02, -03, -04, and SB-01 through SB-09) are shown on Figure 3. Three soil borings (SB-04, -05, and -06) were completed near the current AST tank farm. TCE was reported at 93 milligrams per kilogram (mg/kg) in the 10-to 12-foot (ft) sample collected from soil boring SB-05. This concentration exceeds both the U.S. Environmental Protection Agency (EPA) Industrial Soil Screening Level (SSL), which is 6,000 µg/kg, and the Maximum Contaminant Level (MCL) risk-based SSL, which is 0.0018 mg/kg. No VOCs were reported in soil samples collected from SB-04 and SB-06 (see Figure 3).

In October 2016, AEM collected additional soil samples to better assess soil in the upgradient plume areas near the plant (AEM, 2016). Soil boring locations from this investigation (B-01, through B-06) are shown on Figure 3. TCE was reported at concentrations ranging up to

57 mg/kg in the 10-ft sample collected from boring B-01 located 15 ft southwest of SHA boring SB-05 (see Figures 3 and 4).

Based on the results of the October 2016 soil sampling effort, DHEC requested that additional soil assessment be conducted in correspondence dated March 21, 2017 (see Attachment A). In response, Ingersoll Rand submitted a *Soil Assessment Work Plan Addendum—TCE AST Pad* (dated May 30, 2017) for DHEC's approval. DHEC approved the Work Plan on June 30, 2017 (see Attachment A). The results of this soil assessment, performed in July 2017, are presented in the following sections.

SECTION 2.0 WORK PERFORMED

Field activities were performed under the supervision of an AEM South Carolina–Licensed Professional Geologist. A GeoLab, Inc. South Carolina–Licensed Driller installed the borings and Analytical Environmental Services (AES), a South Carolina–Certified Laboratory, analyzed the soil samples.

The soil borings were installed and sampled in accordance with current U.S. EPA Region 4 Science and Ecosystem Support Division (SESD) Guidance and Operating Procedures (EPA, 2014b). Per DHEC regulations, an application to complete the soil borings was submitted to DHEC prior to implementing the field effort. The South Carolina utilities protection center (SC 811) was notified within 72 hours of scheduled drilling activities to obtain a work permit and a private utility locate company cleared the proposed drilling locations. Proposed drilling locations were repositioned, as necessary, due to the proximity to identified underground utilities. Field sampling personnel were trained geologists with extensive soil sampling experience.

On July 27, 2017, AEM collected 41 direct push technology (DPT) soil samples from seven soil borings (B-07 through B-13) completed to a depth of approximately 25 ft bls near the former TCE ASTs (see Figure 4). Each soil sample was field screened for the presence of VOC vapors using a photoionization detector (PID) as described in Section 2.1.3 and select soil samples were submitted for laboratory analyses. The rationale for selecting soil boring locations is outlined in Table 1 and is based on historical soil sample data (see Figure 3).

2.1 BORING INSTALLATION PROCEDURES

The soil borings were installed in accordance with SESD Operating Procedure SESDPROC-300-R3, *Soil Sampling*, dated August 21, 2014 (EPA, 2014b). Soil borings were advanced using a Geoprobe® track DPT rig. Soil lithologic boring logs are provided in Attachment B. Lithologic cross-sections were produced for the area. The generally east-west and north-south trending cross-section traverses are depicted in Figure 5 while individual cross sections are provided as Figures 6 and 7 (perpendicular to groundwater flow) and Figures 8 and 9 (parallel to groundwater flow).

2.1.1 Boring Installation

The DPT track rig, in conjunction with a Macro-Core® soil sampler, was used to advance each borehole and to collect subsurface soil samples. Dedicated cellulose acetate butyrate (CAB) liners were used inside the Macro-Core sample-spoons to extract soil core samples. CAB liners are typically 1-inch diameter and 5-ft long. The Macro-Core soil sampler allows discrete (grab) soil samples to be collected as required by SESD Operating Procedure guidelines (EPA, 2014a). For safety purposes, the upper 5 ft of each of the seven soil borings were hand augered using pre-cleaned stainless steel augers. A different decontaminated auger

bucket was used to collect the 1 foot soil sample from each boring. The remaining sample intervals: 5 ft, 10 ft, 15 ft, 20 ft, and 25 ft were extracted from the CAB liners.

2.1.2 Concrete Coring

The pavement (asphalt/concrete) was pre-drilled using a 4-inch-diameter Geoprobe carbide-tipped drill bit at B-07, B-09, and B-10 to access the residuum beneath the pavement. Where encountered, the surface paving was less than 0.5-ft thick. The surface paving was patched using similar materials (concrete/asphalt) to the original paving when the borings were abandoned (see Section 2.8).

2.1.3 Field Soil Screening

Soil recovered from each CAB liner was field screened for VOC vapors using a MiniRAE® portable Model 3000 PID. A portion of each soil sample was placed in a sealed plastic sample bag and the head-space within the bag was tested for organic vapors within 15 to 20 minutes of the sample collection. Organic vapor concentrations were measured by puncturing the sample bag with the tip of the PID probe as the PID probe was inserted into the bag. The highest PID measurement in parts per million (ppm) was recorded as the soil vapor concentration. The PID readings are summarized in the soil boring logs for each sample point (see Attachment B). The PID was field calibrated prior to being used on July 27, 2017 in accordance with the manufacturer's specifications. As reported in the soil boring logs, no notable VOC concentrations were measured.

2.2 SOIL SAMPLING PROCEDURES

Soil samples were collected in accordance with SESD Operating Procedure SESDPROC-300-R3, *Soil Sampling*, dated August 21, 2014 (EPA, 2014b). Each soil boring was initially advanced from land surface to a depth of approximately 5 ft bls using stainless steel hand augers. The 1 ft sample from each boring was collected with hand augers. A CAB-lined Macro-Core sampler was then used to collect discrete DPT soil samples at a starting interval of 5-ft bls. Each borehole was advanced to approximately 25 ft bls.

Soil samples were collected at the following intervals: 0–1 ft bls, 5–6 ft bls, 10–11 ft bls, 15–16 ft bls, 20–21 ft bls, and 24–25 ft bls. Some variation in sample intervals occurred due to poor sample recovery or the presence of groundwater. Soil samples collected from below the water table were not submitted for laboratory analysis. The following soil samples were initially submitted for laboratory analysis while others were held for possible analysis upon receiving the initial sample results:

- **B-8:** 5- and 10-ft samples to define the lateral extent of VOC impacted soil east of soil borings SB-5 and B-01, which previously contained TCE concentrations at 10–12 ft bls.
- **B-9:** 5-, 10-, and 15-ft samples to define the lateral and vertical extent of VOC impacted soil north of borings SB-5 and B-01 near the former TCE AST.

- **B-10:** 5- and 10-ft samples to define the lateral extent of VOC impacted soil southwest of borings SB-5 and B-01.
- **B-11:** 5-, 10-, and 15-ft samples to define the lateral and vertical extent of VOC impacted soil within the former spent TCE drum storage area and west of borings SB-5 and B-01.
- **B-12:** 5- and 10-foot samples to define the lateral extent of VOC impacted soil south of borings SB-5 and B-01.
- **B-13:** 5- and 10-foot samples to define the lateral extent of VOC impacted soil north-northeast of borings SB-5 and B-01.

Boring B-12 defined the lateral extent of VOCs south of SB-5 and B-01 because no VOCs were reported in soil samples collected from boring B-12. Therefore, no soil samples were submitted for analysis from boring B-7.

Soil samples (Drum #1 and Drum #2) were collected from the drummed soil cuttings, investigation derived waste (IDW). Drums were labeled as non-hazardous pending the laboratory characterization.

Soil samples were collected in pre-labeled, laboratory-supplied glass containers (preserved 40 milliliter [mL] septum-capped vials and unpreserved 4-ounce jars). A dedicated syringe was used to transfer 3 milliliters (ml) of soil to each sample vial. Sample preservatives included sodium bisulfate (in two vials) and methanol (in one vial). The 4-ounce glass jar in each sample set was unpreserved and used to determine the sample percent moisture. The samples were stored in iced coolers pending transport, under chain-of custody (CoC), for delivery to the laboratory.

2.3 QUALITY ASSURANCE/QUALITY CONTROL

Quality Control (QC) procedures were conducted in accordance with U.S. EPA SESD Operating Procedure SESDPROC-011-R5, *Field Sampling Quality Control*, dated April 16, 2017 (EPA, 2013a). The QC samples included: trip blanks, a duplicate sample, laboratory method blanks, method blank spikes and method blank duplicates, and surrogates. The reported QC analyses were included with the individual laboratory data packages (see Attachment C).

The duplicate sample collected from the 5-ft sample interval of soil boring B-12, designated with the abbreviation “DUP,” contained no variations in VOC concentrations between the original and duplicate samples, thereby indicating laboratory sample result reproducibility.

The laboratory-supplied trip blanks, which accompanied the VOC samples, contained no reportable VOCs; thus, there is no indication of cross-contamination. Laboratory QC sample (method blank duplicates, and surrogates) results were within acceptable control limits.

Laboratory analyses were conducted in a manner that ensures that all data and resulting decisions were technically sound, reliable, statistically valid, and properly documented. The laboratory quality assurance (QA)/QC program includes analysis for precision, accuracy,

completeness, and comparability as specified by EPA. The laboratory abides by a comprehensive QA program based on the program outlined in the U.S. EPA's *Handbook for Analytical Quality Control in Water and Wastewater Laboratories* (EPA, 1979). A copy of the complete QA/QC program is available through the laboratory.

2.4 SAMPLE ANALYTICAL PROCEDURES

Soil and QC samples were hand-delivered under appropriate chain-of-custody to Analytical Environmental Services (AES) of Atlanta, Georgia. Sample analyses were performed by AES in accordance with current U.S. EPA SW846 laboratory protocols. Soil boring and QC samples will be submitted for VOC analyses by method SW846-8260B. Drummed soil cutting samples were analyzed for VOCs using the toxicity characteristic leaching procedure (TCLP) by Method SW846-1311/8260B.

2.5 EQUIPMENT DECONTAMINATION PROCEDURES

Stainless steel, non-dedicated DPT soil sampling equipment was decontaminated in the field in accordance with SESD Operating Procedure SESDPROC-205-R3, *Field Equipment Cleaning and Decontamination*, dated December 18, 2015 (EPA, 2015). Sample rods, spoons, and drive-points were scrubbed with Liqui-Nox® and rinsed with distilled water. The remaining dedicated sampling equipment (CAB liners, soil-core catchers, tubing, etc.) did not require cleaning. Likewise, clean stainless steel hand augers were brought to the site. The hand augers were pre-cleaned by scrubbing with Liqui-Nox and rinsing with distilled water and laboratory grade deionized (DI) water. Once dry, the auger buckets were wrapped in aluminum foil for storage and transport to the site.

2.6 SAMPLE HANDLING AND FIELD DOCUMENTATION PROCEDURES

Information obtained in the field was recorded in bound, non-perforated field notebooks in accordance with SESD Operating Procedure, SESDPROC-010-R5, *Logbooks*, dated May 30, 2013 (EPA, 2013). Field documentation included the following: date, time, and location of activity; equipment used; personnel present; and weather conditions. Recorded sampling data included the following: sample locations, sample depths, sample recovery, sample PID results, and sample containers and preservatives. Soil lithologic descriptions were also documented in the field logbooks.

Samples were collected in appropriate laboratory glass containers, which in turn were placed in small plastic bags to prevent cross-contamination and stored in iced coolers for hand delivery to the laboratory. CoC documentation accompanied the sample coolers to the laboratory.

2.7 INVESTIGATION-DERIVED WASTE MANAGEMENT

The storage and handling of IDW was conducted in accordance with SESD Operating Procedure, SESDPROC-202-R3, *Management of Investigation Derived Waste*, dated July 3,

2014 (EPA, 2014a). DPT drill cuttings (soil), generated as part of this field investigation, were contained in 55-gallon drums (Drum #1 and Drum #2) and sampled for TCLP VOC analysis (see Sections 2.2 and 2.4) for later disposal in accordance with U.S. EPA regulatory guidelines. No VOCs were reported in the IDW and the soil was spread on the ground.

General waste (CAB liners, latex gloves, plastic sheeting, etc.) was collected, bagged, and placed in dumpsters at the facility for disposal.

2.8 BOREHOLE ABANDONMENT PROCEDURES

Soil boring abandonment procedures were completed in accordance with U.S. EPA-approved guidance documents. Soil borings were grouted with a neat Portland Type I cement slurry. The core holes within the concrete and asphalt paving were patched with similar material found at the surface.

SECTION 3.0 FINDINGS

3.1 SOIL ANALYTICAL RESULTS

Soil sample results from the July 27, 2017 are included in Attachment C and summarized in Table 2 and Figure 4. Historical VOC soil sample concentrations from 1993, 2006, and 2016 collected in the area are presented in map view (see Figure 4) and on cross sections (see Figures 6, 7, 8, and 9).

In summary, VOC concentrations were below laboratory reporting limits in the soil samples collected on July 27, 2017 (see Table 2). TCLP VOC concentrations were also below laboratory reporting limits in the IDW soil samples; thus, the soil cuttings are non-hazardous and were spread on the ground.

3.2 VOC ASSESSMENT

Borings -07 through -13 were installed to assess the extent of VOCs previously identified in borings B-01 and SB-05 located 14 to 30 ft northeast of the AST farm. A TCE AST was operated in the tank farm from 1989 to 1993. Prior to 1989, a TCE and a methanol AST were located approximately 60 ft northeast of the AST farm. TCE was pumped in underground pipelines from the TCE ASTs to the facility building.

VOC concentrations were below laboratory reporting limits in the soil samples collected on July 27, 2017 (see Table 2). The lateral extent of VOCs identified in B-01 and SB-05 were defined by borings installed in July 2017 and by previously installed borings (see Table 2 and Figures 4 and 8). Soil samples collected from these borings (B-8, -9, -10, -11, 12, -13, and SB-06) did not contain VOCs above laboratory reporting limits. VOCs were not reported in soil boring B-9 installed near the original TCE AST (see Figure 4).

The soil sample data collected to date has not identified a TCE source area near the original TCE AST. Any historical releases near the original AST were likely remediated as part of the methanol remediation when methanol impacted soil was excavated and treated with a thermal unit on site in October 1989. Soil sample data indicate that TCE identified in soil samples collected from B-01 and SB-05 likely came from the original TCE AST underground piping or possibly later from the TCE AST located in the tank farm.

Thus, fifteen soil samples collected from six soil borings were analyzed for VOCs in July 2017. These sample results confirm that one source area with elevated VOC concentrations (57 and 93 mg/kg) has been identified by borings B-01 and SB-05 northeast of the AST tank farm and that the lateral and vertical extent of soil impacts has been identified by these soil samples. Groundwater from this source area migrates to the northwest towards recovery well MW-19A.

SECTION 4.0 CONCLUSIONS

The following conclusions are based on the findings of this limited source area soil sampling effort:

- Fifteen soil samples collected from six soil borings were analyzed for VOCs in July 2017 to assess the lateral and vertical extent of VOCs previously identified in soil borings B-01 and SB-05. No VOCs were identified in these soil samples above laboratory reporting limits.
- These sample results confirm that one source area with elevated VOC concentrations (57 and 93 mg/kg) has been identified by borings B-01 and SB-05 northeast of the AST tank farm and that the lateral and vertical extent of soil impacts has been identified by these soil samples. Groundwater from this source area migrates to the northwest towards recovery well MW-19A.
- DHEC requested that a remedial alternatives evaluation/feasibility study be conducted in correspondence dated February 24, 2016. Sufficient data was not available at that time to complete a feasibility study. Now that a source area has been identified and the lateral and vertical extent of the source area defined, a remedial alternatives evaluation/feasibility study can be conducted. Upon DHEC approval, Ingersoll Rand and AEM will prepare this study.

Re: Limited Source Area Assessment (AEM; November 22, 2016)
Ingersoll Rand- Honea Path Plant
Anderson County
Consent Agreement 01-045-W
BLWM File # 400238

Dear Mr. Goldstein:

The South Carolina Department of Health and Environmental Control (the Department) has reviewed and approved the Limited Source Area Assessment report submitted by AEM. The following comments were generated by this review.

- 1: The EPA Risk-based SSL (soil screening levels) for protection of groundwater or the MCL (maximum contaminant level)-based SSL should be used, if available to define the extent of the soil contamination.
- 2: The Department concurs that additional sampling and data collection is warranted prior to submittal of a Feasibility Study (FS). Please note, a FS should include all media impacted i.e. soil, groundwater, and surface water.

Please submit the proposed work plan for additional source area investigation to my attention on or before May 30, 2017. On all correspondence regarding this site, please reference BLWM File # 400238. If you have questions concerning this correspondence, or would like to submit additional information, contact Jan Trent, the project manager, at (803) 898-0723 or email me at trentjc@dhec.sc.gov.

Sincerely,

Jan Trent, Project Manager

Soil Assessment Work Plan Addendum TCE AST Pad (AEM; May 30, 2017)
Anderson County
Consent Agreement 01-045-W
BLWM File # 400238

Dear Mr. Goldstein:

The South Carolina Department of Health and Environmental Control (the Department) has reviewed and approved the Soil Assessment Work Plan Addendum TCE AST Pad submitted by AEM.

The report should include soil profile cross sections of the TCE AST Pad area. The *Soil Assessment Addendum Report* should be submitted to my attention on or before September 28, 2017. On all correspondence regarding this site, please reference BLWM File # 400238. If you have questions concerning this correspondence, or would like to submit additional information, contact Jan Trent, the project manager, at (803) 898-0723 or email me at trentjc@dhec.sc.gov.

Sincerely,

Leona Miles
Atlanta Environmental Mgmt
2580 NE Expressway
Atlanta GA 30345

RE: Honea Path

Dear Leona Miles:

Order No: 1707N71

Analytical Environmental Services, Inc. received 6 samples on 7/27/2017 6:20:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative. AES' certifications are as follows:

-South Carolina Certification number 98016003 for Clean Water Act and for Solid and Hazardous Waste, effective until 6/30/18.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar

Case Narrative

Sample Receiving Non-conformance:

The date listed on the Chain of Custody in the top right corner is 7/28/17; however, per Leona Miles with Atlanta Environmental Management via e-mail on 7/28/17 at 7:48 AM, the date was supposed to be 7/27/17. The laboratory proceeded as instructed. Furthermore, sample B-10 (20') was received, but it was not listed on the Chain of Custody, at the request of Leona Miles with Atlanta Environmental Management via e-mail on 7/28/17 at 8:08 AM, the sampled was logged in and placed on hold until further notice.

ANALYTICAL ENVIRONMENTAL SERVICES, INC.

August 02, 2017

Leona Miles
Atlanta Environmental Mgmt
2580 NE Expressway
Atlanta GA 30345

RE: Honea Path

Dear Leona Miles: Order No: 1707N72

Analytical Environmental Services, Inc. received 4 samples on 7/27/2017 6:20:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative. AES' certifications are as follows:

-South Carolina Certification number 98016003 for Clean Water Act and for Solid and Hazardous Waste, effective until 6/30/18.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar
Project Manager

Case Narrative

Sample Receiving Non-conformance:

The date listed on the Chain of Custody in the top right corner is 2/28/17; however, per Leona Miles with Atlanta Environmental Management via e-mail on 7/28/17 at 7:48 AM, the date was supposed to be 7/27/17. The laboratory proceeded as instructed.

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **Atlanta Environmental Mgmt**AES Work Order Number: **1707N71**2. Carrier: FedEx UPS USPS Client Courier Other _____

	Yes	No	N/A	Details	Comments
3. Shipping container/cooler received in good condition?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	damaged <input type="checkbox"/> leaking <input type="checkbox"/> other <input type="checkbox"/>	
4. Custody seals present on shipping container?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
5. Custody seals intact on shipping container?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
6. Temperature blanks present?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
7. Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Cooling initiated for recently collected samples / ice present <input type="checkbox"/>	
8. Chain of Custody (COC) present?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
9. Chain of Custody signed, dated, and timed when relinquished and received?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
10. Sampler name and/or signature on COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
11. Were all samples received within holding time?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
12. TAT marked on the COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. <input type="checkbox"/>	

13. Cooler 1 Temperature 1.2 °C Cooler 2 Temperature °C Cooler 3 Temperature °C Cooler 4 Temperature °C14. Cooler 5 Temperature °C Cooler 6 Temperature °C Cooler 7 Temperature °C Cooler 8 Temperature °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials).

MJ 7/27/17

	Yes	No	N/A	Details	Comments
16. Were sample containers intact upon receipt?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
17. Custody seals present on sample containers?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
18. Custody seals intact on sample containers?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
19. Do sample container labels match the COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	incomplete info <input type="checkbox"/> illegible <input type="checkbox"/> no label <input type="checkbox"/> other <input type="checkbox"/>	
20. Are analyses requested indicated on the COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
21. Were all of the samples listed on the COC received?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	samples received but not listed on COC <input type="checkbox"/> samples listed on COC not received <input type="checkbox"/>	
22. Was the sample collection date/time noted?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
23. Did we receive sufficient sample volume for indicated analyses?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
24. Were samples received in appropriate containers?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
25. Were VOA samples received without headspace (< 1/4" bubble)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
26. Were trip blanks submitted?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	listed on COC <input checked="" type="checkbox"/> not listed on COC <input type="checkbox"/>	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials).

AJ 7/28/17

	Yes	No	N/A	Details	Comments
28. Have containers needing chemical preservation been checked? *	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
29. Containers meet preservation guidelines?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
30. Was pH adjusted at Sample Receipt?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials).

RE: Honea Path

Dear Leona Miles: Order No: 1707O94

Analytical Environmental Services, Inc. received 8 samples on 7/28/2017 1:17:00 PM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative. AES' certifications are as follows:

-South Carolina Certification number 98016003 for Clean Water Act and for Solid and Hazardous Waste, effective until 6/30/18.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar
Project Manager

Submission of samples to the laboratory constitutes acceptance of AES's Terms & Conditions. Samples received after 3PM or on Saturday are considered as received the following business day. If no TAT is marked on COC, AES will proceed with standard TAT. Samples are disposed of 30 days after completion of report unless other arrangements are made.

Page 3 of 37

Matrix Codes: A = Air GW = Groundwater SE = Sediment SO = Soil SW = Surface Water WW = Waste Water W = Water (Blanks) DW = Drinking Water (Blanks) O = Other (specify)

Preservative Codes: H+I = Hydrochloric acid + ice I = Ice only N = Nitric acid S+I = Sulfuric acid + ice S/M+I = Sodium Bisulfate/Methanol + ice O = Other (specify) NA = None

SAMPLE/COOLER RECEIPT CHECKLIST

1. Client Name: **Atlanta Environmental Mgmt**AES Work Order Number: **1707N71**2. Carrier: FedEx UPS USPS Client Courier Other _____

	Yes	No	N/A	Details	Comments
3. Shipping container/cooler received in good condition?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	damaged <input type="checkbox"/> leaking <input type="checkbox"/> other <input type="checkbox"/>	
4. Custody seals present on shipping container?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
5. Custody seals intact on shipping container?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
6. Temperature blanks present?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
7. Cooler temperature(s) within limits of 0-6°C? [See item 13 and 14 for temperature recordings.]	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Cooling initiated for recently collected samples / ice present <input type="checkbox"/>	
8. Chain of Custody (COC) present?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
9. Chain of Custody signed, dated, and timed when relinquished and received?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
10. Sampler name and/or signature on COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
11. Were all samples received within holding time?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
12. TAT marked on the COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	If no TAT indicated, proceeded with standard TAT per Terms & Conditions. <input type="checkbox"/>	

13. Cooler 1 Temperature 1.2 °C Cooler 2 Temperature °C Cooler 3 Temperature °C Cooler 4 Temperature °C14. Cooler 5 Temperature °C Cooler 6 Temperature °C Cooler 7 Temperature °C Cooler 8 Temperature °C

15. Comments: _____

I certify that I have completed sections 1-15 (dated initials).

MJ 7/27/17

	Yes	No	N/A	Details	Comments
16. Were sample containers intact upon receipt?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
17. Custody seals present on sample containers?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
18. Custody seals intact on sample containers?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
19. Do sample container labels match the COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	incomplete info <input type="checkbox"/> illegible <input type="checkbox"/> no label <input type="checkbox"/> other <input type="checkbox"/>	
20. Are analyses requested indicated on the COC?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
21. Were all of the samples listed on the COC received?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	samples received but not listed on COC <input type="checkbox"/> samples listed on COC not received <input type="checkbox"/>	
22. Was the sample collection date/time noted?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
23. Did we receive sufficient sample volume for indicated analyses?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
24. Were samples received in appropriate containers?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
25. Were VOA samples received without headspace (< 1/4" bubble)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
26. Were trip blanks submitted?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	listed on COC <input checked="" type="checkbox"/> not listed on COC <input type="checkbox"/>	

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials).

AJ 7/28/17

	Yes	No	N/A	Details	Comments
28. Have containers needing chemical preservation been checked? *	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
29. Containers meet preservation guidelines?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		
30. Was pH adjusted at Sample Receipt?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

I certify that I have completed sections 28-30 (dated initials).

AJ 7/28/17

 Rpt Lim Reporting Limit

< Less than Result value
 E Estimated (value above quantitation range)
 N Analyte not NELAC certified
 S Spike Recovery outside limits due to matrix

B Analyte detected in the associated method blank
 H Holding times for preparation or analysis exceeded
 R RPD outside limits due to matrix

RE: Honea Path

Dear Leona Miles: Order No: 1708852

Analytical Environmental Services, Inc. received 3 samples on 8/8/2017 12:00:00 AM for the analyses presented in following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative. AES' certifications are as follows:

-South Carolina Certification number 98016003 for Clean Water Act and for Solid and Hazardous Waste, effective until 6/30/18.

These results relate only to the items tested. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar
Project Manager

Case Narrative

Off Hold Analysis:

At the request of Leona Miles with Atlanta Environmental Management samples B-13 (5'), B-13 (10'), and B-13 (15') were taken off hold from AES work order 1707O94 and analyzed for Total Volatiles SW8260B with a standard five day turnaround time.

Qualifiers: > Greater than Result value
 BRL Below reporting limit
 J Estimated value detected below Reporting Limit
 Rpt Lim Reporting Limit

< Less than Result value
 E Estimated (value above quantitation range)
 N Analyte not NELAC certified
 S Spike Recovery outside limits due to matrix

B Analyte detected in the associated method blank
 H Holding times for preparation or analysis exceeded
 R RPD outside limits due to matrix
