BLWM ID# 400238

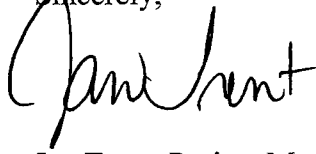

Dear Mr. Goldstein:

The South Carolina Department of Health and Environmental Control (the Department) has reviewed the reference Source Area Focused Feasibility Study. The following comments were generated:

- 1: Table 1. The Source Area Soil Remedial Options Evaluation ranks several remedial technologies against the seven CERCLA criteria; however, only two options were carried through to the comparative analysis in Section 4 of the document. The Department requests that excavation and in-situ chemical oxidation-soil blending, and/or electrical resistive heating be included in the comparative analysis in addition to the two already included in Section 4. The table may also need to be adjusted to reflect different scores for in-situ chemical oxidation-soil blending, and/or electrical resistive heating.
- 2: Table 2. The Source Area Groundwater Remedial Options Evaluation ranks several remedial technologies against the CEERCLA criteria; however only two were carried through to the comparative analysis in Section 4. Please include pump and treat (continue containment) and vacuumed enhanced extraction in addition to the two options that were previously included in the comparative analysis.
- 3: The document should also include Figures depicting the locations for each technology included in the comparative analysis.

Please send the revised Section 4 of the report and Tables to my attention on or May 28, 2019. If you have any questions, please contact me at (803) 898-0723 or email me at [trentjc@dhec.sc.gov](mailto:trentjc@dhec.sc.gov).

Sincerely,

A handwritten signature in black ink, appearing to read "Jan Trent". The signature is fluid and cursive, with the first name "Jan" and last name "Trent" clearly distinguishable.

Jan Trent, Project Manager  
State Voluntary Cleanup Program  
Site Assessment, Remediation & Revitalization Division  
Bureau of Land and Waste Management
