

COVID-19 Re-Opening Guidance for Businesses

As businesses continue to operate and/or start back up, **it remains critical to both the state's public health as well as our economic health** that we all individually and collectively continue to follow guidelines that will minimize the spread of COVID-19. **Please see the [AccelerateSC webpage](#) for additional guidance.**

Another helpful webpage is the [Centers for Disease Control and Prevention \(CDC\)'s home page for Businesses and Employers as it relates to COVID-19](#). SC DHEC also has a [Regulatory Assistance page related to COVID-19](#) that includes information for businesses as well as links to more specific guidance.

To highlight a few key points:

1. **Screening of asymptomatic individuals with testing is not recommended** because the testing available at this time cannot provide assurance that someone will not become sick after the test is performed.
 - a. The gold-standard test, called a PCR, is a snapshot in time that only tells whether the individual is infected at that time. Antibody tests should not be used for diagnosis of current illness, and it is not yet known whether antibodies guarantee protection from becoming infected again.
 - b. DHEC recommends that only individuals with symptoms consistent with COVID-19 and those who were a close contact to a case be tested for the disease.
 - c. The safest approach is to assume everyone is infected and follow the recommended guidelines that are in place to avoid transmission of the virus.
2. Employees should wear masks or cloth face coverings, especially when around other people.
3. Continue to encourage telework when feasible with business operations. Consider alternate work schedules such as staggering start times or shifts for employees who are on site.
4. People who have symptoms should stay at home until symptoms resolve. Be sure your leave policies reinforce this as well as encourage self-isolation when symptoms are present.
 - a. Employees should be considered sick if they have symptoms of COVID-19, which currently include:
 - Fever (100.4°F or greater) or chills
 - Cough
 - Shortness of breath or difficulty breathing
 - Fatigue
 - Muscle or body aches
 - Headache
 - New loss of taste or smell
 - Sore throat
 - Congestion or runny nose
 - Nausea or vomiting
 - Diarrhea
 - b. Negative COVID-19 testing is **not** recommended or required for people to return to work. Even workers who were confirmed to have COVID-19 should **not** be required to have negative testing to return to work.
 - c. Instead, DHEC recommends that employees not come to work until 10 days have passed since their symptoms began **AND** they are free of fever (100.4° F [38° C] or greater using an

COVID-19 Re-Opening Guidance for Businesses

- oral thermometer) for 24 hours without the use of fever-reducing medicines **AND** their other symptoms have improved.
5. As you develop your COVID-19 related processes, keep in mind the population of people who are at greater risk of contracting this virus and to having more difficulty in fighting it (those with pre-existing conditions like diabetes, heart or lung diseases, as well as the elderly).
 6. Continue to follow the advice of public health officials, including:
 - a. staying at least 6 feet apart
 - b. wearing a cloth face covering or face mask,
 - c. frequent hand washing with soap & water or use of approved hand sanitizers,
 - d. regular cleaning of frequently touched surfaces (door handles, phones, keyboards, etc.),
 - e. removing frequently touched surfaces that can be removed (for example trash can lids), and
 - f. increasing ventilation air exchanges and percent outdoor air where possible.

Please see the [CDC Guidance documents](#) for other recommendations that may be applicable to your work environment, as well as for specific information on cleaning and disinfecting different types of work surfaces.

If an employee is confirmed to have COVID-19, employers should inform fellow employees of their possible exposure to COVID-19 in the workplace but maintain confidentiality as required by the Americans with Disabilities Act (ADA).

Employees exposed to a co-worker with confirmed COVID-19 should monitor themselves for symptoms and may be recommended for a 14-day quarantine based on the DHEC case investigator’s assessment. Please see the [Interim Guidance for COVID-19 Scenarios in Businesses](#) for generalized guidance. If possible, the area where the infected individual worked should be isolated for 24 hours and then cleaned and disinfected. If it is not possible to delay access to the area, the workers who perform cleaning/disinfecting should wear appropriate PPE for protection against the cleaning materials and the virus. Refer to the [CDC Cleaning and Disinfecting Guidelines](#) for additional information. Please note that if your business is not affiliated with the healthcare industry, you are not required to hire a specialized company for cleaning and disinfecting your workplace.
