

Geographic Spread

South Carolina reported widespread activity this week. This is the fourth consecutive week at widespread activity.

Influenza Activity

Overall, there was an increase in influenza activity this week.

Regional Influenza Activity

Increase

No change

Increase

Increase

Virologic Surveillance

This week there were **180** lab-confirmed tests reported. Influenza A was most frequently reported. In the current flu season, there has been **960** lab-confirmed tests reported.

Influenza-Like Illness Surveillance

The percent of patient visits to sentinel providers for an influenza-like illness (ILI) was 4.73%, which is above South Carolina's baseline (3.53%). The ILI activity level overall was **high**.

Influenza-Associated Hospitalizations

This week 93 influenza-associated hospitalizations were reported by 44 hospitals. The cumulative hospitalization rate is 14.1 per 100,000. In the current flu season, there have been 709 influenza-associated hospitalizations.

Influenza-Associated Deaths

This week 2 influenza-associated deaths were reported; however, these 2 deaths occurred during previous weeks. The cumulative mortality rate is 0.4 per 100,000. In the current flu season, there have been 21 influenza-associated deaths.

Influenza-Like Illness Surveillance

This week, the ILI activity level was **high** and 4.73% of patient visits to SC ILINet providers was attributed to an influenza-like illness. This is above the state baseline, 3.53%.

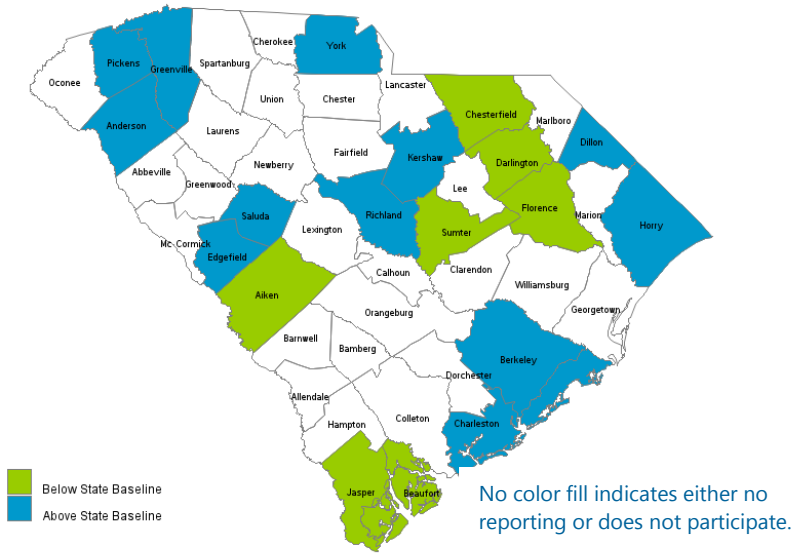

Reports were received from providers in 19 counties, representing all DHEC Public Health regions.

ILI percentage is dependent upon the number of reporting providers and/or can vary by disease activity or the number of providers submitting reports.

Percentage of Influenza-like Illness (ILI) Visits Reported by Sentinel Providers for Past and Current Seasons

County ILI Percent
