

February 2020

What Is Cancer?

Cancer is not one disease, but a group of diseases. For example, lung cancer is a completely different disease than colorectal cancer. All cancers have one thing in common, they can grow and spread uncontrollably if not diagnosed at an early stage and properly treated.

Cancer is caused by many things, like smoking, poor diet, and/or family history. The greatest risk factor for any cancer is increasing age. The risk of getting cancer increases with age. The risk of developing cancer differs for men and women. In the United States, one out of two men and one out of three women will have cancer in his or her lifetime.

What Is Cancer Incidence?

Cancer *incidence* is a measure of how many *new cancer cases* occurred in a certain period of time. A cancer *incidence rate* tells how many cancers were diagnosed per 100,000 people in the population. (For example, a cancer incidence rate of 400 means that for every 100,000 people, 400 were diagnosed with cancer).

Incidence rates can be *age-adjusted*, meaning that the age structure of the population is taken into account when rates are calculated. Adjusting for age allows us to compare rates by removing differences in the age structure among different populations. Incidence rates shown below are age-adjusted to the 2000 US standard population.

What Is Cancer Mortality?

Cancer *mortality* is a measure of how many *cancer deaths* occurred in a certain period of time. A cancer *mortality rate* tells how many people died from cancer per 100,000 people in the population. (For example, a cancer mortality rate of 150 means that for every 100,000 people in the population, 150 died from cancer).

Cancer mortality rates can also be *age-adjusted*, taking into account the age structure of the population. Mortality rates shown below are age-adjusted to the 2000 US standard population.

Impact of Cancer: US, SC, and DHEC Region

The American Cancer Society (ACS) estimates that 1,806,590 new cases of cancer will be diagnosed in the United States in 2020. This translates to 4,950 new diagnoses each day. Furthermore, an estimated 606,520 people in the United States are expected to die from cancer in 2020.

In South Carolina, ACS estimates 31,710 new cases of cancer will be diagnosed in 2020 or over 87 new cancer cases diagnosed each day, while an estimated 10,780 South Carolinians will die from cancer in 2020. The four most common cancers in SC are cancers of the lung, breast (female), prostate, and colon/rectum. The four leading cancer causes of death in SC are lung, colon/rectum, breast (female), and pancreas.

Tables 1 through 4 below show the number of new cancer cases and deaths for Pee Dee Region, including age-adjusted rates for cancers in the region and for the state of SC. The last column in each table shows how the region ranks in comparison to the other 3 DHEC regions. A rank of 1 means that a region has the highest rate of any region, while a rank of 4 means that a region has the lowest rate of any region. *At this time, the most recent cancer statistics for South Carolina and the United States are for new cases diagnosed in 2017. Deaths occurring in 2017 are also used.*

Table 1 shows 5-year cancer incidence data for Pee Dee Region and SC for all cancers by sex and race, including Pee Dee Region's rank in SC compared to all other SC counties.

Table 1. Cancer Incidence by Sex and Race, 2013-2017, Pee Dee Region and South Carolina*

	SC		Pee Dee Region	
	5-year rate	5-year rate	new cases*	SC rank
all	454	460	5645	2
male	511	533	3016	1
female	413	407	2629	4
white	456	461	3997	2
black	447	454	1578	2

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 2 shows 5-year cancer mortality data for Pee Dee Region and SC for all cancers by sex and race, including Pee Dee Region's rank in SC compared to all other SC counties.

Table 2. Cancer Mortality by Sex and Race, 2013-2017, Pee Dee Region and South Carolina*

	SC		Pee Dee Region	
	5-year rate	5-year rate	lives lost*	SC rank
all	168	178	2172	1
male	209	226	1208	1
female	139	144	964	1
white	163	175	1529	1
black	190	188	631	3

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 3 shows 5-year cancer incidence data for Pee Dee Region and SC for selected cancers, including Pee Dee Region's rank in SC compared to all other SC counties.

Table 3. Cancer Incidence for Selected Cancers, 2013-2017, Pee Dee Region and South Carolina*

cancer	SC		Pee Dee Region	
	5-year rate	5-year rate	new cases*	SC rank
breast (female)	130	123	783	4
prostate (male)	115	124	770	1
lung/bronchus	64	71	919	1
colon/rectum	38	41	498	1
pancreas	14	14	175	1

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 4 shows 5-year cancer mortality data for Pee Dee Region and SC for selected cancers, including Pee Dee Region's rank in SC compared to all other SC counties.

Table 4. Cancer Mortality for Selected Cancers, 2013-2017, Pee Dee Region and South Carolina*

cancer	SC		Pee Dee Region	
	5-year rate	5-year rate	lives lost*	SC rank
breast (female)	22	23	147	2
prostate (male)	22	23	107	1
lung/bronchus	45	49	625	1
colon/rectum	14	16	194	1
pancreas	11	11	142	1

*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 5 shows the percentage of cancers diagnosed in early and late stages of disease in **Pee Dee Region** and SC. Cancers diagnosed in late stages lessen the potential for successful treatment and raise the risk of premature loss of life.

Table 5. All Cancers by Stage of Diagnosis, 2013-2017, Pee Dee Region and South Carolina*

	SC	Pee Dee Region
	Percent of all cancers	Percent of all cancers
Early Stage	48.8	46.3
Late Stage	40.7	40.0
Unknown Stage	10.5	13.8

*Percents (proportions) shown are (rounded) based on 5 years of data. Statistics include *in situ* cancers.

Source: SC Central Cancer Registry.

Breast Cancer in Pee Dee Region

Among women, breast cancer was the number 1 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 783 new female breast cancer cases diagnosed and 147 deaths from this disease.

Prostate Cancer in Pee Dee Region

Among men, prostate cancer was the number 1 most commonly diagnosed cancer and the number 3 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 770 new prostate cancer cases diagnosed and 107 deaths from this disease.

Lung Cancer in Pee Dee Region

Lung Cancer was the number 1 most commonly diagnosed cancer and the number 1 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 919 new lung cancer cases diagnosed and 625 deaths from this disease.

Colorectal Cancer in Pee Dee Region

Colorectal cancer was the number 4 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual average of 498 new colorectal cancer cases diagnosed and 194 deaths from this disease.

Pancreatic Cancer in Pee Dee Region

Pancreatic cancer was the number 9 most commonly diagnosed cancer and the number 4 leading cause of cancer death from 2013-2017. For this 5-year period, there was an annual

average of 175 new pancreatic cancer cases diagnosed and 142 deaths from this disease.

Screening

Men and women should speak with their doctor about the pros and cons of screening and to determine their level of risk.

The SC Best Chance Network (BCN) is a federally funded program that provides breast and cervical cancer screening, follow-up and diagnosis for low-income, uninsured women age 30 – 64, screening thousands of women each year. For more information see:

<http://www.scdhec.gov/Health/DiseasesandConditions/Cancer/FreeCancerScreenings/>

Notes: Data are subject to change as data sets are updated. Rates are per 100,000 and age-adjusted to the 2000 U.S. standard population. Statistics do not include *in situ* cancers, except for bladder. The following suppression rules may have been applied to the data in the text and tables above: counts of 1-4 are recorded as less than 5; counts of 5-9 are rounded to 10. Rates based on counts fewer than 16 are suppressed (~).
