Ms. Beverly Banister
Director, APTMD, U.S. EPA, Region 4
Sam Nunn Atlanta Federal Center
61 Forsyth Street, SW
Atlanta, GA 30303-8960

RE: Annual Air Monitoring Network Plan for 2019

Dear Ms. Banister:

In accordance with the requirements of 40 Code of Federal Regulations Part 58, Subpart B, the South Carolina Department of Health and Environmental Control (DHEC) respectfully submits the Annual Air Monitoring Network Plan for calendar year 2019. The DHEC is required by 40 CFR 58.10 to adopt and submit to the Regional Administrator an Annual Monitoring Network Plan which provides for the establishment and maintenance of an air quality surveillance system. This system is a network of State and Local Air Monitoring Stations (SLAMS) including Federal Reference Method (FRM) and Federal Equivalent Method (FEM) monitors that are part of SLAMS, National Core Monitoring Network (NCore) stations, Speciation Trends Network (STN) stations, and Special Purpose Monitor (SPM) monitoring stations. This plan is required to include a statement of purpose for each monitor and evidence that siting and operation of each monitor meets the requirements of 40 CFR 58, Appendices A, C, D and E.

The DHEC received one comment during the public comment period, which was held from May 21, 2018 through June 22, 2018. A complete package, including the Department's response to comments received is being sent to Gregg Worley of your office. Should you have any questions or need additional information regarding this matter, please contact Robert Brown of my staff at (803) 898-4105.

Sincerely,

Rhonda B. Thompson, PE, Chief
Bureau of Air Quality
SCDHEC

Certification

This document contains the planned changes and final description of the sites and monitors of the South Carolina Ambient Air Monitoring Network (Monitoring Network) for criteria pollutants and related parameters for calendar year 2019. The South Carolina Department of Health and Environmental Control (Department) certifies that the network described herein meets or exceeds the minimum requirements needed to support the State Implementation Plan, national air quality assessments, and policy decisions as required in 40 Code of Federal Regulations (CFR) Part 58, Ambient Air Quality Surveillance, at the time of submittal to the United States Environmental Protection Agency (EPA), Region 4. Due to circumstances that may arise during the implementation of the plan in 2018 and during the 2019 monitoring year, some elements of the network may require modification. A notification of modifications will be posted on the Department website and provided to the EPA Region 4 office. Where necessary, a request for approval of deviations from this plan and supporting documentation will be submitted to the EPA Region 4 office.

Acronyms

AQI – Air Quality Index
AQS – Air Quality System
BAQ – Bureau of Air Quality
CBSA – Core-Based Statistical Area
CFR – Code of Federal Regulation
CO – Carbon Monoxide
CSA – Combined Statistical Area
CBSA – Core Based Statistical Area
CSN – Chemical Speciation Network
CMS – Continuous Monitoring Site
DAQA – Division of Air Quality Analysis
Department – South Carolina Department of Health and Environmental Control
DNPH – Analysis method using 2,4-dinitrophenylhydrazine
EPA – Environmental Protection Agency
FEM – Federal Equivalent Method
FRM – Federal Reference Method
GC/MS – Gas Chromatography / Mass Spectroscopy
GFAA – Graphite Furnace Atomic Absorption Spectrometry
HPLC – High Performance Liquid Chromatography
IC – Ion Chromatography
IMPROVE – Interagency Monitoring of Protected Visual Environments
ICP/MS – Inductively Coupled Plasma Mass Spectroscopy
ID – Site Identification
MET – Meteorology
MOA – Memorandum of Agreement
MSA – Metropolitan Statistical Area
mSA – Micropolitan Statistical Area
$\mu g/m^3$ – Micrograms per cubic meter
NAAQS – National Ambient Air Quality Standards
NATTS – National Air Toxics Trends Site
NCore – National Core Monitoring Network
NO – Nitric oxide
NO_2 – Nitrogen Dioxide
NO_x – Nitrogen Oxides
NO_y – NO_x and other oxidized species
NPAP – National Performance Audit Program
OMB – Office of Management and Budget
PEP – Performance Evaluation Program
$PM_{2.5}$ – Particulate Matter < 2.5 microns
PM_{10} – Particulate Matter < 10 microns
PPB – Parts Per Billion
PPM – Parts Per Million
PSD – Prevention of Significant Deterioration
PTFE – Polytetrafluoroethylene
PUF – Polyurethane Foam
QA – Quality Assurance
QAPP – Quality Assurance Project Plan
QC – Quality Control
SLAMS – State and Local Air Monitoring Station
SO_2 – Sulfur Dioxide
SPM – Special Purpose Monitor
STN – Speciation Trends Network
SVOC – Semi-volatile Organic Compound
TEOM – Tapered Element Oscillating Microbalance
TPY – Tons Per Year
TSP – Total Suspended Particulate
UV – Ultraviolet
VOC – Volatile Organic Compound
WGS84 – World Geodetic System of 1984 revised in 2004

Table of Contents

Introduction

The Department or its predecessors have operated an air quality monitoring network in South Carolina since 1959. During that time, the network has continually evolved to meet the requirements and needs of the Department's Air Program and to comply with federal requirements. In 2019, the network will be comprised of 93 monitors and samplers at 30 sites.

In October, 2006, the EPA published revisions to the ambient monitoring regulations (71 FR 61236, October 17, 2006) requiring quality assurance (QA), monitor designations, minimum requirements for both number and distribution of monitors among metropolitan statistical areas (MSAs), and probe siting changes. The regulation also included the requirement for an annual monitoring network plan and periodic network assessments.

This South Carolina Annual Air Monitoring Network Plan (Network Plan) covers the eighteen-month period from July 1, 2018 through December 31, 2019. This period includes a six-month implementation period during which sites indicated as 'New' will be identified, secured, and prepared for the installation of monitoring equipment. It is expected that any monitoring indicated as 'New' or 'To be established' will be installed, calibrated, and operating in 2019, with the exception of some Ozone monitors, which may begin operation at the start of the South Carolina Ozone monitoring season (March 1-October 31). This Network Plan, as required and described in 40 CFR Part 58.10, and Periodic Network Assessment, must contain the following information for each monitoring station in the network:

- The Air Quality System (AQS) site identification number (ID) for existing stations,
- Location of each monitoring station, including street address and geographical coordinates,
- The sampling and analysis method used for each measured parameter,
- The operating schedule for each monitor,
- Any proposal to remove or relocate a monitoring station within a period of eighteen months following the network plan submittal,
- The monitoring objective and spatial scale of representativeness for each monitor,
- The identification of any sites that are suitable for comparison against the Particulate Matter < 2.5 microns ($PM_{2.5}$) National Ambient Air Quality Standard (NAAQS), and
- The MSA, Core-Based Statistical Area (CBSA), Combined Statistical Area (CSA), or other area represented by the monitor.

This document constitutes the 2019 South Carolina Annual Ambient Air Monitoring Network Plan. The site pages are organized into two main parts:

- Network Summaries: A table which presents the total number of sites and monitors for the State, including a list of all proposed changes to the current network, and
- Air Monitoring Station Descriptions: An outline of the designations, parameters, monitoring methods, and the purpose for each monitor at the site.

The Monitoring Network is reviewed annually. Planned changes are described in this Network Plan and provided for public review and comment prior to submission to the EPA Region 4 Administrator.

Public Participation Opportunities

In response to public interest and the potential impact of the monitoring regulation changes, the Department's Air Program solicits involvement from both internal (to the Department) and external workgroups. Opportunities for public involvement include:

- A webpage maintained for publication and access to current and draft monitoring plan reference documents and announcements[1].
- Availability of the proposed 2019 Network Plan for public review and comment ran from May 21, 2018 through June 21, 2018. All public comments received will be summarized and addressed in Appendix A before submitting the final network plan to the EPA. A complete set of comments will be submitted to the EPA with the 2019 Network Plan.

The Department is committed to continuing the opportunities for input and participation in the development of the annual revisions of the Network Plan and the periodic assessments of the air quality surveillance system.

Network Operation

The primary responsibility for the operation of the Monitoring Network is assigned to the Division of Air Quality Analysis (DAQA) in the Bureau of Environmental Health Services (Division). The Division establishes, maintains, and operates the sites and instruments that make up the network and performs the analysis of samples collected as part of routine monitoring or special projects. Data generated by the network for comparison to the NAAQS is verified to be accurate and reported by the Division to the national AQS database for storage and public access.

Criteria pollutant monitoring for the purpose of comparison to the NAAQS is performed using the EPA designated Federal Reference Methods (FRM) or Federal Equivalent Methods (FEM) to ensure the precision and accuracy of the measurements across the air quality surveillance system.

Regular calibration and audits of the measurement systems are performed to verify that the instruments are operating correctly and data being collected is accurate. All monitors and samplers are calibrated at least once a year. Calibration is also performed whenever the monitor/sampler fails a bi-weekly Quality Control (QC)/precision check or multi-point audit, when maintenance is performed that may affect the monitor response, or if the monitor is located away from the building in which it was calibrated. If possible, a QC/precision check or flow check should precede any maintenance that would affect monitor response.

The QA activities supporting the Monitoring Network meet or exceed the QA requirements defined in 40 CFR Part 58, Appendix A (Quality Assurance Requirements

[1]http://www.scdhec.gov/HomeAndEnvironment/Air/AmbientAir/

for SLAMS and SPM Air Monitoring). Raw data is collected hourly from sites across the state and provided to internal data users (forecasters and data analysts) and to the AIRNow database for presentation to the public. Ozone monitors provide hourly data during Ozone Season (March 1-October 31).

Before the data is submitted to AQS, it is verified to be accurate through review of the instrument QC and QA performance documentation. Instrument QA/QC alone is not sufficient to assure monitoring data quality. In addition to periodic site assessments, the Department conducts additional visits to monitoring sites to document comparisons with applicable siting criteria.

It is the Department's intent that all criteria pollutant monitors and samplers be sited and operated in accordance with the requirements of 40 CFR Part 58. As required in 40 CFR Part 58, Appendix A, the DAQA in the Division establishes, maintains, and operates the sites and instruments and performs the analysis of samples collected. Data generated by the network for comparison to the NAAQS is verified to be accurate and reported by the Division to the national AQS database for storage and public access. Regular calibration and audits are performed to verify that the instruments are operating correctly and data being collected is accurate. As required in 40 CFR Part 58, Appendix C, all criteria pollutant monitoring in the Monitoring Network for the purpose of comparison to the NAAQS is performed using the EPA designated FRM or FEM. Also, all criteria pollutant monitoring in the Monitoring Network meets the monitoring objectives, spatial scales, and design criteria as described in 40 CFR Part 58, Appendix D. Finally, in this document, each site page contains a statement addressing compliance to 40 CFR Part 58, Appendix E for SLAMS monitors. If the site is not in compliance, a plan is presented to address the deficiency. For SPM monitors, the 40 CFR Part 58.20 states that compliance is optional, but monitoring organizations are encouraged to meet as many of the Appendix E requirements as possible.

An element of the Quality System[2] employed by the Division is periodic assessments of systems and monitor performance. As the primary QA organization for ambient air monitoring activities, the Division operates under the approved Environmental Quality Control Quality Assurance Management Plan, the Ambient Air Quality Monitoring Quality Assurance Project Plan, and approved plans for specific projects. The EPA Region 4 office may conduct audits of any component of the operation of the network or quality management system. The Division also participates in the National Performance Audit Program (NPAP) and the Performance Evaluation Program (PEP) administered by the EPA to provide independent audits.

Station Description Content

Specific siting information for each site and monitor is stored in the EPA's AQS, the national ambient air database. The AQS Site Description includes the exact location of the site, local and regional population, and description of the site location, monitor types, and monitoring objectives. This site and monitor information is routinely updated

[2] The Quality System is the means by which the Department implements the quality management process through the Quality Assurance Management Plan for SC DHEC, March, 2014.

whenever there is a change in site characteristics or pollutants monitored. Pictures for each monitoring site can be viewed at: https://gis.dhec.sc.gov/monitors/

The AQS is used as the primary repository for all South Carolina ambient air monitoring information, including site descriptions. All ambient air monitoring data is stored in AQS, including criteria pollutants, non-NAAQS parameters, ambient air toxics, total suspended particulate (TSP), and supporting QA data.

Each network station description contained in this document includes a Site Description and Monitor Details. An explanation of the information in each station description is presented below.

Site Description – The site description includes specific information about each ambient air monitoring site. The site description header includes the following:

1) Site Name – The name that is given to the site.
2) CSA/MSA – The area where the site is located as defined by the United States Census. (July, 2017).[3]
3) AQS Site ID – The unique site ID used in AQS is in the form of 45-cc-ssss where:
    a. 45 is the federal identification code for South Carolina,
    b. ccc is the county identification code, and
    c. ssss is the site identification code within the county.
4) Location – Typically, the street address of the site, where available.
5) County – County in which the site is located.
6) Coordinates – Latitude (N), then Longitude (W) listed in decimal degrees using WGS84 projection.
7) Date Established – The date when each existing monitoring station was established is shown in the description. For new stations proposed in this Monitoring Plan, a date is provided when it is expected for the station to be in operation. Individual monitors at a site may have differing start and stop dates.
8) Site Evaluation (most recent date visited) – Each monitoring station in the network is periodically visited to determine whether all required probe exposure criteria for monitors are met. If necessary, corrective action is scheduled to address deficiencies. If a new monitoring site has not yet been evaluated, it will be denoted with the word “PENDING”.

Monitor Details – Each station description has a table that lists the parameter(s) and the descriptive information associated with that particular parameter. An explanation of the information in the tables is presented below.

[3] The US Census Bureau periodically adjusts CBSA names and boundaries. This plan uses the latest available revision.

1) Parameter – Criteria (compounds for which a NAAQS has been established), non-criteria, and/or supporting parameters (primarily meteorological measurements) measured at the site are listed.

2) Scale – Each monitor or sampler in the monitoring network is described in terms of the approximate physical dimensions of the air parcel nearest the monitoring station throughout which pollutant concentrations are expected to be reasonably similar. This is most often referred to as the "Scale" of the monitor. Different pollutants monitored at the same location may represent different scales depending on the characteristics of the pollutant. Area dimensions or scales of representativeness used in the network description are:

    a. Microscale – Air volumes associated with area dimensions ranging from several meters up to about 100 meters.

    b. Middle scale – Areas up to several city blocks in size with dimensions ranging from approximately 100 meters to 0.5 kilometers.

    c. Neighborhood scale – Extended areas of a city that have relatively uniform land use with dimensions ranging from 0.5 to 4.0 kilometers.

    d. Urban scale – Citywide or equivalent rural areas with dimensions ranging from 4 to 50 kilometers.

    e. Regional scale – Areas ranging from 50 to hundreds of kilometers in diameter.

    The true representative area may best be described by an irregular shape of the approximate dimensions indicated above to account for local sources, topography, and differing land use.

    The representative scale of a monitor is closely associated with the monitoring objective.

3) Objective – The ambient air monitoring network is designed to meet three primary objectives:

    a. Provide air pollution data to the public in a timely manner. Near real-time data is made available on the internet through AIRNow and Air Quality Index (AQI) reporting and forecasting in the major metropolitan areas.

    b. Support compliance with ambient air quality standards and emissions strategy development. Monitors are operated to measure concentrations for comparison to NAAQS and to provide information to aid in the development of strategies to improve air quality.

    c. Support air pollution research studies. Data from the monitoring network support greater understanding of the impacts and effects of ambient air pollution.

    Individual monitors within a monitoring network that support these basic objectives generally serve one or more of the following purposes:

        i. Determine highest concentrations of pollutants,

ii. Determine representative concentrations in areas of high population density,

iii. Determine impact on air quality of significant sources or source categories,

iv. Determine general background concentrations,

v. Determine extent of regional pollutant transport, and

vi. Determine welfare-related impacts in more rural and remote areas (ex. visibility impairment and impacts to vegetation).

The design intent in siting stations is to correctly match the area represented by the sample of monitored air with the scale most appropriate to meet the monitoring objective of the monitor. The relationship of appropriate scale to the six basic purposes as follows:

Monitoring Purpose	**Siting Scale**
Highest concentration	Micro, Middle, Neighborhood
Population exposure	Neighborhood, Urban
Source impact	Micro, Middle, Neighborhood
General/background	Neighborhood, Urban, Regional
Regional transport	Urban, Regional
Welfare-related impacts	Urban, Regional

Monitor and sampler data is regularly reviewed to assure the assigned scale is correct and appropriate for the intended objective.

4) Designation – Monitor designations that may be found in the tables include the State and Local Air Monitoring Station (SLAMS), special purpose monitor (SPM), National Core Monitoring Network (NCore), non-regulatory, QA collocated, and IMPROVE monitoring. Definitions of these designations are:

   a. SLAMS – Monitors for which NAAQS have been established. These stations must meet requirements that relate to four major areas: QA, monitoring methodology, sampling interval, and siting of instruments and instrument probes.

   b. SPM – Monitors which support investigations addressing complaints, areas and pollutants of concern, network refinement, modeling verification, and compliance. These monitors are committed to investigation and projects as described in the associated Quality Assurance Project Plan (QAPP). They may be located as separate monitoring stations or be included at existing monitoring locations. The SPM may also monitor for air toxics, particulate, criteria pollutants, precipitation, and meteorology.

Supplemental speciation is a type of SPM monitor that operates according to Chemical Speciation Network (CSN) protocols, but is not contained in the STN Network. This monitoring data will be reported to AQS where possible. Although siting and probe exposure will conform to all requirements for SLAMS monitors whenever possible, the 40 CFR Part 58.20 states that compliance for SPM monitors is optional.

c. NCore – NCore is a national multi-pollutant network that utilizes advanced measurement systems for particles, pollutant gases, and meteorology. It provides data for long-term trends of criteria and non-criteria pollutants, and supports air quality model evaluation, scientific studies, and ecosystem assessments. Most NCore monitors are SLAMS.

d. Non-regulatory Monitor – A monitor that measures data on a pollutant that will not be used for regulatory purposes.

e. Collocated QA Sampler – A particulate matter sampler that is paired with but operated independent of a similar sampler. It is used to indicate measurement accuracy.

f. IMPROVE – The Interagency Monitoring of Protected Visual Environments (IMPROVE) network collects visibility related data. These monitors are operated in the State of South Carolina in cooperation with the federal government, and are listed in the Site Description, but are not included in the Site Tables.

The SLAMS and SPM data may be used in the reporting of an area's AQI. The AQI is a method of reporting that converts concentration levels of pollution to a simple number scale of 0-500. Index reporting is required for all urban areas with a population exceeding 350,000. Intervals on the AQI scale are related to potential health effects of the daily measured concentration of the measured pollutants. All stations in a metropolitan area provide data for daily index reporting. Data collected from continuous Ozone and $PM_{2.5}$ monitors is collected hourly and reported as AQI maps on the EPA's AIRNow website. A daily AQI is provided for the areas in and around Aiken, Charleston, Columbia, Florence/Darlington, Greenville-Spartanburg, Myrtle Beach, and York/Chester/Lancaster.

5) Probe Height – The monitor or sampler probe is the point where ambient air enters the analytical or sample collection system. Ideally, air would be sampled approximately at nose height, but due to operational, exposure, and security considerations, air may be sampled further from ground level. Proper probe height is specified in the monitoring regulations (typically between 2 and 15 meters) and is checked as part of the periodic site evaluations.

6) Analysis Methods – All sampling and analytical procedures used to determine ambient concentrations of criteria pollutants for comparison to the NAAQS will use either Federal Reference or Equivalent Methods (FRM or FEM). For the reactive gases, borosilicate glass or FEP Teflon are used in the sampling train.

Where appropriate for specific monitoring objectives, well characterized, non-equivalent methods may be used. The analysis method for the parameters most commonly measured and listed in the station descriptions are described below.

a) Particulate Matter less than 10 microns (PM_{10}) – PM_{10} samplers operated by the Department are designated as either FRM or FEM and are operated consistent with the requirements in 40 CFR Part 50, Appendix J and 40 CFR Part 58. Intermittent samplers collect a 24-hour sample no less than every sixth day on a filter. The filter is conditioned and weighed before and after the sample run. The weight of material collected on the filter and the volume of air sampled is used to calculate the average concentration, expressed as micrograms per cubic meter ($\mu g/m^3$) for the sample period. The filters are equilibrated before each weighing for a minimum of 24 hours at a mean temperature between 15 - 30°C and a mean relative humidity between 25 and 45 percent.

   Continuous PM_{10} samplers provide 24-hour concentration measurements every day. During sampling, ambient air passes through an inlet designed to pass only particles smaller than 10 microns in diameter. The flow rate, critical to precise particle size separation, is monitored and controlled constantly. Particulate in the sample stream is collected on a Teflon-coated glass fiber filter. The mass collected on the filter is also continuously monitored. The difference between the current filter weight and the previous weight gives the total mass of the collected particulate for that period. The mass concentration is calculated by dividing the mass gained by the flow through the filter for the period. The concentration measurements are averaged over 1-hour and 24-hour periods. Data is stored locally on redundant data acquisition systems and recovered hourly by a central office computer system (AirVision). Only 24-hour daily averages are used for comparison to the ambient standards.

b) Particulate Matter less than 2.5 microns ($PM_{2.5}$) – All $PM_{2.5}$ samplers operated by the Department for comparison to the NAAQS are designated FRM samplers. Manual samplers are operated consistent with the requirements in 40 CFR Part 50, Appendix L. Samples are collected on 46.2-millimeter polytetrafluoroethylene (PTFE) filters over a 24-hour sampling period. Air flow through the filter is maintained at 16.7 liters per minute at local ambient temperature and pressure. The flow rate must be maintained within ±5 percent throughout the sample period. Sample filters are collected within 96 hours of the end of the sample run and are kept cooled during transit to minimize potential sample loss.

   The PTFE filters are equilibrated before each weighing for a minimum of 24 hours at a mean temperature between 20°C and 23°C and 30 to 40 percent mean relative humidity. Filters are weighed before and after the sample period. Filters are used within thirty days of initial weighing. Collected samples are typically weighed within two weeks of sampling. If the samples are maintained below 4°C after collection, they can be held for up to thirty days from the end of the sample period. The mass collected and the volume sampled are used to calculate the concentration, expressed in $\mu g/m^3$.

Unless designated a FEM, continuous $PM_{2.5}$ monitors do not provide concentration data suitable for comparison to the NAAQS. Non-FEM continuous monitors that provide reasonably comparable measurements may be used to provide data for calculation of an area Air Quality Index (AQI). Continuous $PM_{2.5}$ samplers provide 24-hour concentration measurements every day. During sampling, ambient air passes through an inlet system designed to pass only particles smaller than 2.5 microns in diameter. The flow rate, critical to precise particle size separation, is monitored and controlled constantly. Particulate in the sample stream is collected on a Teflon-coated glass fiber filter. The mass collected on the filter is also continuously monitored. The difference between the current filter weight and the previous weight gives the total mass of the collected particulate for that period. The mass concentration is calculated by dividing the mass gained by the flow through the filter for the period. The concentration measurements are averaged over 1-hour and 24-hour periods. Data is stored locally on redundant data acquisition systems and recovered hourly by a central office computer system (AirVision). Only 24-hour daily averages from FEM monitors are used for comparison to the ambient standards.

c) $PM_{2.5}$ Speciation sampling – In addition to operating $PM_{2.5}$ samplers that provide measurement of only the $PM_{2.5}$ mass concentration, the Department also operates $PM_{2.5}$ Speciation samplers to collect samples for analysis to determine the chemical makeup of the particulate. Speciation sample collections are part of the national CSN. Samples are collected on a set of two cartridges on the Met-One SASS sampler for nitrates, sulfates, and metals and on a single cartridge in the URG 3000N sampler for carbon containing material. The samples are collected over a 24-hour sampling period. The individual cartridges contain denuders and filters designed to efficiently capture the major components of $PM_{2.5}$.

   After collection, the samples are shipped cold to an EPA contract laboratory for analysis. At the laboratory, the samples are analyzed using thermal optical analysis (for carbon), ion chromatography (IC) for nitrates and sulfates, and x-ray fluorescence for metals to determine the presence and concentration of specific compounds. Sample results are available on the EPA website.

d) Sulfur Dioxide (SO_2) – Instruments used to continuously monitor SO_2 concentrations in the atmosphere use the Ultraviolet (UV) Fluorescence Federal Reference Method. The continuous data output from the instrument is stored locally on redundant data acquisition systems and recovered hourly by central office computer system (AirVision).

   Calibration of these instruments and audits of their performance are done using the EPA protocol gas mixtures containing a certified concentration of

SO_2 in nitrogen. This gas is diluted to provide known concentrations of SO_2. These known concentrations are supplied to the instrument, which is adjusted so the instrument output corresponds with the specific concentrations. Calibration curves are prepared for each instrument and each measurement is automatically compared to this curve before entry into the data acquisition system.

e) Carbon Monoxide (CO) – Continuous monitoring for CO is performed using the FRM non-dispersive infrared correlation method. Data is stored locally on redundant data acquisition systems and recovered hourly by the DAQA central office computer system (AirVision).

   Calibration of the instrument and audits of its performance are done using the EPA Protocol gas mixtures containing a certified concentration of CO in air. The gas is diluted to provide known concentrations of CO. Known concentrations are supplied to the instrument, which is adjusted so the instrument output corresponds with the specific concentrations. Calibration curves are prepared for each instrument which are used to calculate concentration measurements for storage in the data acquisition system.

f) Ozone – Ozone is monitored using the FEM UV photometry method. The continuous data output from the instrument is stored locally on redundant data acquisition systems and recovered hourly by the central office computer system (AirVision).

   Monitors are routinely calibrated and their performance audited using portable ozone transfer standards. Calibration curves are prepared for each instrument which are used to calculate the concentration measurements stored in the data acquisition system.

g) Nitrogen Dioxide (NO_2) – The FRM UV chemiluminescence method is used for measurement of NO_2 concentration in the ambient air. The continuous data output from the instrument is stored locally on redundant data acquisition systems and recovered hourly by a central office computer system (AirVision).

   Calibration of the instrument and audits of their performance are done using the EPA protocol gas mixtures containing a known concentration of Nitric Oxide (NO) and Nitrogen Oxides (NO_x) in nitrogen. The gas is diluted to present several known concentrations of the oxides. A converter is used to convert NO_2 to NO for reaction with internally generated ozone and measurement of the light produced by the reaction of NO and Ozone. Known concentrations are supplied to the instrument, which is adjusted so the instrument output corresponds with the supplied concentrations. Calibration curves are prepared for each instrument which are then used to provide concentration measurements for storage in the data acquisition system.

h) Lead – Lead concentrations are determined by the analysis of TSP collected using high volume particulate samplers as described in 40 CFR Part 50, Appendix G. Particulate samples are acid extracted from a portion of the filter

to dissolve metals from the collected materials. The lead content is determined using Flameless (Graphite Furnace) Atomic Absorption Spectrometry or may be analyzed by an EPA national contract laboratory using Inductively Coupled Plasma Mass Spectroscopy (ICP/MS).

i) Meteorology – Meteorology consists of wind direction, wind speed, precipitation, temperature, and pressure. Collection and/or analysis methods are discussed below.

   a. Wind Direction and Speed – Wind data is collected using systems that incorporate high precision 'Air Quality' systems. The systems use separate or combined wind vanes and anemometers mounted 10 meters above ground. The systems provide supporting information about the local meteorology.

   b. Precipitation – Precipitation is measured by tipping bucket gauges that provide a signal indicating the occurrence, rate, and amount of precipitation. The gauges are not heated, so they may not accurately provide the time and rate for frozen precipitation events. The monitors are checked periodically for operation and accuracy using a known volume of water and compared with actual volumes of collected precipitation where there are collocated samplers.

   c. Ambient Temperature and Pressure – Ambient temperature is available from sensors that are part of the sampling systems for the FRM $PM_{2.5}$ samplers. Ambient temperature measurement is necessary for the systems to maintain the required flow rate used to reproducibly separate the desired particulate size fractions as conditions change. Although the primary use of the measurement is for sampler flow control, the sensors are accurate and regularly audited. Temperature and pressure sensors are compared to reference systems at least once per month.

j) Volatile Organic Compounds – Volatile organic compounds (VOCs) are collected into passivated or silica lined stainless steel canisters. The canisters are cleaned, tested, and evacuated at the laboratory prior to installation at the sampling site. At the sampling location, the canisters are filled and pressurized with ambient air throughout the sampling period (typically 24 hours). Measured portions of the captured air are concentrated at low temperature and analyzed using gas chromatography with a mass spectrometer detector (GC/MS) to identify and quantitate target compounds. The collection and analysis method is based on the EPA Method TO-15.

k) Semi-volatile Organic Compounds – Semi-volatile organic compounds (SVOCs) are collected using polyurethane foam (PUF) and a solid adsorbent to trap the compounds from air pulled through the material by a high-volume sampler. The SVOCs are extracted from the collection cartridge using a solvent, and the rinses are concentrated for analysis. Measured portions of the extract are analyzed using GC/MS to identify and quantitate the collected compounds. The collection and analysis method is based on the EPA Method TO-13.

l) Carbonyls – Carbonyls (including aldehydes and ketones) are extracted from ambient air by reaction with a compound that stabilizes them enough to capture and hold. The reaction of the target compounds with Dinitrophenyl hydrazine (DNPH) removes them from the sampled air and concentrates them in the sample cartridge. Solvent extraction of the DNPH derivatives from the cartridge is followed by analysis using High Pressure Liquid Chromatograph to identify and quantitate the collected Carbonyls. The collection and analysis method is based on the EPA Method TO-11.

m) Metals – Metals in particulate are collected on filters using the TSP or PM_{10} High Volume samplers. Metals are extracted from a portion of the filter using sonication in an acid solution. Detection, identification, and quantitation of the target metals use Graphite Furnace AA or inductively coupled plasma with a mass spectrometer (ICP/MS). The collection and analysis method is based on the EPA Method IO-3.

n) Precipitation Chemistry – A portion of the precipitation sample collected each week is analyzed for pH and conductivity. To determine concentrations of dissolved material that contributes to acid rain, the collected material is analyzed for cations and anions using ion chromatography (IC).

o) Sulfate – Sulfate in particulate is measured by collecting samples on the species-specific denuders used in the CSN and are analyzed for anions (SO_4= and NO_3-) using ion chromatography for separation and quantification of the species. Samples are analyzed for anions at the DAQA lab. All other speciation analyses are performed by Amec-Forte-Wheeler.

7) Sampling frequency – Sampling frequency indicates how often a measurement is made. Sampling typically involves collection of a sample over a period (typically 24 hours, midnight to midnight EST) and the delivery of the sample to the laboratory for preparation and analysis. Samples are collected every day (1:1), every third day (1:3), every sixth day (1:6), every twelfth day (1:12), or weekly, depending on the data quality objectives of the project. Results are reported as averages for the sample period. The EPA publishes the 1:3 and 1:6 day sampling schedules used by the South Carolina Ambient Air Monitoring Network and nationwide[4].

Monitoring typically uses on-site analyzers that continuously sample the air and measure the pollutant of interest. Results of the analysis are reported as hourly averages. Five-minute averages are also reported for SO_2 concentrations. One-minute averages are collected from many of the continuously monitored parameters for use in verification and validation of the reported monitoring data.

Changes for 2019

Any planned changes in parameters monitored, the configuration, or operations at the site planned for 2019 are described herein and summarized in the Summary of 2019 Network Changes. Unless otherwise indicated, changes at a site including the beginning of new monitoring activity will be effective January 1, 2019. Ozone monitoring for 2019 at new or special project sites may start at the beginning of the Ozone monitoring season (March 1-October 31).

2018 Network Summary

This summary table presents the elements of the South Carolina monitoring network as of May 1, 2018.

Network Summary: Calendar Year 2018 Air Monitoring Stations																
Region	Sites	$PM_{2.5}$	$PM_{2.5}$ Cont.	Speciation	PM_{10}	TSP/Lead	Ozone	SO_2	NO_2/NO/NO_y	CO	Carbonyls	SVOC	VOC	Precip. Chem.	Precipitation	*MET

Required Monitoring

The EPA regulation 40 CFR Part 58, Appendix D requires that each State maintain a minimum number of monitors to properly characterize air quality and to meet any required objectives of the monitoring network[5]. In general, these minimum requirements are based on the MSA population and current ambient air monitoring design values. The following sections discuss the minimum monitoring criteria for each of the criteria pollutants (Ozone, Particulate Matter ($PM_{2.5}$ and PM_{10}), Lead, SO_2, NO_2, and CO), the CBSAs, and the MSA population. The final section shows the current South Carolina minimum monitoring requirements.

Minimum Monitoring for Ozone – The Ozone minimum monitoring criteria has two requirements:

1) Required Ozone SLAMS sites – A minimum number of required Ozone SLAMS sites for each CBSA that is determined by CBSA population and the peak Ozone concentrations.
2) NCore Requirement – Each NCore site must include an Ozone monitor. The Parklane (45-079-0007) site in Columbia, South Carolina is the NCore site for South Carolina.

Minimum Monitoring for $PM_{2.5}$ – The $PM_{2.5}$ minimum monitoring criteria has six requirements:

1) Required $PM_{2.5}$ SLAMS sites – A minimum number of required $PM_{2.5}$ SLAMS sites for each CBSA.
2) Continuous Requirement – A continuous $PM_{2.5}$ monitoring requirement which is equal to at least one-half (round up) the minimum required $PM_{2.5}$ SLAMS sites. Also, at least one required continuous analyzer in each CBSA must be collocated with one of the required FRM or FEM monitors, unless at least one of the required FRM/FEM monitors is itself a continuous FEM monitor, in which case, no collocation requirement applies.
3) Regional Background and Transport – At least one $PM_{2.5}$ site must be established in each state to monitor for regional background and at least one $PM_{2.5}$ site to monitor regional transport. The Cape Romain (45-019-0046) site in Charleston County is the regional background site and the Chesterfield (45-025-0001) site in Chesterfield County is the regional transport site.
4) NCore Requirement – Each state is required to operate at least one NCore site which measures $PM_{2.5}$ using both continuous and integrated/filter-based samplers. The Parklane (45-079-0007) site in Columbia, South Carolina is the NCore site for South Carolina.
5) Near-road $PM_{2.5}$ Monitoring – The EPA required the collocation of one $PM_{2.5}$ monitor with a near-road NO_2 monitor in urban areas having populations of 1,000,000 or more by January 1, 2017. The Charlotte-Concord-Gastonia, NC-SC MSA is the only MSA in South Carolina that met the population requirement for a collocated $PM_{2.5}$ monitor. The near-road monitoring requirement for the Charlotte-Concord-Gastonia,

[5] 40 CFR Part 58.11 paragraph (a)(3)(c) and Appendix D to 40 CFR Part 58.

NC-SC MSA is being fulfilled at the Remount Road (37-119-0045) site by the Mecklenburg County Air Quality Commission.

6) Speciation Monitoring – Chemical speciation monitoring is conducted at the Parklane (45-079-0007) site and is funded as part of the $PM_{2.5}$ Speciation Trends Network (STN). Speciation Monitoring is also conducted at the Chesterfield (45-025-0001) site and is funded by South Carolina.

Minimum Monitoring for PM_{10} – The PM_{10} minimum monitoring criteria has one requirement that is based on the CBSA population, the number of exceedances of the NAAQS, and the percentage of PM_{10} concentrations over or under the NAAQS. Unlike other criteria pollutants, the minimum monitoring requirements for PM_{10} is given as a range of required monitoring sites for a CBSA.

Minimum Monitoring for Lead – The Lead minimum monitoring criteria has one requirement that any facility with annual Lead emissions exceeding 0.5 tpy will be required to have a Lead sampler. Based on the state-submitted 2014 National Emissions Inventory, there are no facilities in South Carolina with Lead emissions greater than 0.5 tpy.

On May 7, 2010, the Department issued an air synthetic minor construction permit to Johnson Controls Battery Group for the Florence Recycling Center (Permit No. 1040-0129-CA). Under a settlement agreement[6] with several petitioners, the Florence Recycling Center supports source-oriented ambient Lead monitoring being conducted by the Department at several sites around the facility. Additional details of the monitoring of this facility can be found in the Florence MSA section of this Monitoring Plan under the site name "Johnson Controls."

Minimum Monitoring for SO_2 – The SO_2 minimum monitoring criteria has three requirements:

1) Requirement for Monitoring by the Population Weighted Emissions Index – The population weighted emissions index (PWEI) is determined using the most current population of each CBSA and the most recent level of SO_2 emissions for each county within the CBSA. The emissions data is available from the National Emissions Inventory. For any CBSA with a calculated PWEI value equal to or greater than 1,000,000, a minimum of three SO_2 monitors are required. For any CBSA with a calculated PWEI value equal to or greater than 100,000, but less than 1,000,000, a minimum of two SO_2 monitors are required. For any CBSA with a calculated PWEI value equal to or greater than 5,000, but less than 100,000, a minimum of one SO^2 monitor is required.

   The following table presents each CBSA's 2017 population, 2014 SO_2 emissions, calculated index, and minimum monitoring requirements. The process for calculating the index can be found at the bottom of the table.

[6] http://www.scdhec.gov/HomeandEnvironment/docs/JCI/JCI-Settlement%20Agreement_07142010.pdf

CBSA	2017 CBSA Population	2014 CBSA SO_2 Emissions (Tons)	PWEI	SO_2 Minimum Monitors Required
*Charlotte-Concord-Gastonia, NC-SC MSA	2,525,305	7,624	19,253	1
Greenville-Anderson-Mauldin MSA	895,923	3,098	2,776	0
Columbia MSA	825,033	17,706	14,608	1
Charleston-North Charleston MSA	775,831	15,796	12,255	1
*Augusta-Richmond County, GA-SC MSA	600,151	3,353	2,012	0
*Myrtle Beach-Conway-North Myrtle Beach, SC-NC MSA	464,165	4,837	2,245	0
Spartanburg MSA	334,391	398	133	0
Florence MSA	205,831	3,797	782	0
Hilton Head Island-Bluffton-Beaufort MSA	215,302	908	195	0
Sumter MSA	106,847	182	19	0

The PWEI is calculated using US Census population data and state emission inventory data at the CBSA level. The population for each CBSA (based on the most recent US Census or Census estimate) is multiplied by the CBSA total SO_2 emissions (reported in tons using the latest National Emissions Inventory data). This product is divided by 1,000,000 to derive the index.

CBSA with index greater than 1,000,000 will require 3 monitors.
CBSA with index less than 1,000,000 but greater than 100,000 will require 2 monitors.
CBSA with index less than 100,000 but greater than 5,000 will require 1 monitor.
CBSA with index less than 5,000 will require no monitors.

*Monitors may be operated in the non-South Carolina portion of the CBSA.

2) Regional Administrator Required Monitoring – The Regional Administrator may require additional SO_2 monitoring sites above the minimum number of monitors required by the PWEI in areas that have the potential to have high SO_2 concentrations, in areas impacted by sources which are not conducive to modeling, or in locations with susceptible and vulnerable populations that are not otherwise being monitored. South Carolina does not have any SO_2 Regional Administrator Required Monitoring.

3) NCore Requirement – Each NCore site must include a SO_2 monitor. The Parklane (45-079-0007) site in Columbia, South Carolina is the NCore site for South Carolina.

Minimum Monitoring for NO_2 – The NO_2 minimum monitoring criteria has four requirements:

1) Near-road NO_2 Monitors – Each state must have one microscale near-road NO_2 monitoring site in each CBSA with a population of at least 1,000,000 or more persons. An additional near-road NO_2 monitoring site is required for any CBSA with a population of 2,500,000 or more, or in any CBSA with a population of 1,000,000 or more that has one or more roadway segments with 250,000 or greater Annual Average Daily Traffic (AADT) counts. The Charlotte-Gastonia-Concord NC-SC MSA meets the population requirement of at least 1,000,000 or more persons. The Remount Road site is located in Charlotte, North Carolina and has a near-road NO_2 monitor.
2) Requirements for Area-wide NO_2 Monitoring – Each state must have one monitoring site in each CBSA with a population of 1,000,000 or more persons which will monitor a location of expected highest NO_2 concentrations representing the neighborhood or larger spatial scales. The Garinger High School (37-119-0041) site in Charlotte, North Carolina also operates an area-wide NO_2 monitor.
3) Regional Administrator Required Monitoring – The Regional Administrators, in collaboration with states, require a minimum of forty additional NO_2 monitoring sites above the minimum monitoring requirements (nationwide) in any area, with a primary focus on siting these monitors in locations to protect susceptible and vulnerable populations. The Greenville ESC (45-045-0015) site is a Regional Administrator Required Monitoring site.
4) NCore Requirement (NO/NO_y Monitoring) – Each NCore site must include a NO/NO_y monitor that will collect data to be used to produce conservative estimates for NO_2 and further Ozone research. The Parklane (45-079-0007) site in Columbia, South Carolina is the NCore site for South Carolina.

Minimum Monitoring for CO – The CO minimum monitoring criteria has two requirements:

1) Near-road CO Monitors – Each state with CBSAs having a population of 1,000,000 or more people must have one CO monitor collocated with one required near-road NO_2 monitor to be operational by January 1, 2017. The Charlotte-Concord-Gastonia, NC-SC MSA is the only CBSA in South Carolina that meets the population requirement for a collocated CO monitor. The Mecklenburg County Air Quality office operates a CO monitor at the Remount Road (37-119-0045) near road site in Charlotte, North Carolina that became operational on January 1, 2017.
2) NCore Requirement – Each NCore site in a CBSA with a population of 500,000 or more must include a CO monitor. The Parklane (45-079-0007) monitoring site in the Columbia, SC MSA is the NCore site for South Carolina and supports one

CO monitor. The Garinger (37-119-0041) monitoring site in Mecklenburg County is also an NCore site and supports a CO monitor.

Minimum Monitoring for the Photochemical Assessment Monitoring Stations (PAMS) – South Carolina is not subject to the PAMS requirement.

The CBSAs and the Minimum Monitoring Requirements – The term CBSA is a collective term for the defined MSAs and Micropolitan Statistical Areas (mSA). A MSA area contains a core urban area of 50,000 or more population, and a mSA contains an urban core of at least 10,000 but less than 50,000 population. Each metropolitan or micropolitan area consists of one or more counties and includes the counties containing the core urban area, as well as any adjacent counties that have a high degree of social and economic integration (as measured by commuting to work) with the urban core[7].

A MSA or mSA geographic composition, or list of geographic components at a particular point in time, is referred to as its "delineation". The MSA or mSA are delineated by the U.S. Office of Management and Budget (OMB) and are the result of the application of published standards based on Census Bureau data. The standards for delineating the areas are reviewed and revised once every ten years, prior to each decennial census. Generally, the areas are delineated using the most recent set of standards following each decennial census. Between censuses, the delineations are updated annually to reflect the most recent Census Bureau population estimates. Areas based on the 2010 standards and Census Bureau data were delineated in July of 2017[8,9].

While the Department understands the need for establishing minimum monitoring requirements, the EPA appropriately has mechanisms within the network plan approval and network assessment process to allow states the flexibility to implement a monitoring network that meets the three basic monitoring objectives and addresses National and State needs. The recent changes in the MSA definitions are an example of the reasons for the incorporation of flexibility in the regulations and illustrate the necessity that the EPA uses the discretion available in the monitoring regulations to afford states flexibility and regulatory certainty.

Per 40 CFR Part 58, Appendix D, paragraph 2 (e), minimum monitoring requirements in multi-state MSAs can be met through a cooperative agreement. In the absence of an agreement between states, the minimum monitoring requirements must be met independently in each portion of the MSA. South Carolina has established a memorandum of agreement (MOA) with the Georgia Department of Natural Resources, Environmental Protection Division[10], North Carolina Department of Environmental and

** Minimum ambient air monitoring requirements are met cooperatively with the States of Georgia and North Carolina.

Summary of 2019 Network Changes

Augusta-Richmond County, GA-SC MSA (South Carolina portion includes Aiken and Edgefield Counties)

No changes planned for 2019.

Charleston-North Charleston MSA

No changes planned for 2019.

Charlotte-Concord-Gastonia, NC-SC MSA

No changes planned for 2019.

Columbia MSA

No changes planned for 2019.

Florence MSA

No changes planned for 2019.

Greenville-Anderson-Mauldin MSA

Garrison Arena (45-007-0006) Site – This Site will be established in 2019.

Big Creek (45-007-0005) Site – This Site will be terminated after the 2019 Ozone season.

Hilton Head Island-Bluffton-Beaufort MSA

No changes planned for 2019.

Myrtle Beach-Conway-North Myrtle Beach SC-NC MSA

No changes planned for 2019.

Spartanburg MSA

No changes planned for 2019.

Sumter MSA

No changes planned for 2019.

Remainder of State

No changes planned for 2019.

Summary of 2018 Network Changes

Augusta-Richmond County, GA-SC MSA (South Carolina portion includes Aiken and Edgefield Counties)

No changes planned for 2018.

Charleston-North Charleston MSA

Moncks Corner National Guard (45-015-1002) Site – This Site will be established in 2018.

FAA (45-019-0048) Site – The $PM_{2.5}$ sampler was discontinued in May, 2018.

Bushy Park (45-015-0002) Site – This Site will be terminated at the end of the 2018 Ozone season.

Cape Romain (45-019-0046) Site – This site was designated as the required regional background for $PM_{2.5}$. The $PM_{2.5}$ monitoring designation was changed from SPM to SLAMS.

Charlotte-Concord-Gastonia, NC-SC MSA

York Landfill (45-091-0008) Site – A SO_2 monitor will be added.

Columbia MSA

No changes planned for 2018.

Florence MSA

No changes planned for 2018.

Greenville-Anderson-Mauldin MSA

Clemson (45-077-0002) Site – This site will be terminated at the end of the 2018 Ozone season.

Wolf Creek (45-077-0003) Site – This site will be terminated at the end of the 2018 Ozone season.

Jackson Middle School

CSA/MSA: none/Augusta-Richmond County MSA
AQS Site ID: 45-003-0003
Location: 8217 Atomic Road, Jackson
County: Aiken
Coordinates: +33.34219, -81.78872
Date Established: October 24, 1985
Site Evaluation: January 10, 2018

The Jackson Middle School site is located in southwestern Aiken County, within the town limits of Jackson at the Jackson Middle School. Jackson is located in a suburban setting to monitor concentrations upwind of the Augusta urbanized area. The Jackson site monitors for Ozone. The sample inlet is 128 meters from the nearest road.

This site meets siting criteria found in 40 CFR Part 58 Appendix E. The Northeast tree does not meet the requirements for tree height in the 40 CFR Part 58 Appendix E, Section 4 (Spacing from Obstructions), but there is still more than 270° unobstructed air flow around the probe.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Ozone 44201-2	Urban	Upwind Background	SLAMS	3.4	Ultraviolet Absorption (087)	Continuous

Trenton

CSA/MSA: none/Augusta-Richmond County MSA
AQS Site ID: 45-037-0001
Location: 660 Woodyard Road (Hwy 121)
County: Edgefield
Coordinates: +33.73993, -81.85362
Date Established: March 28, 1980
Site Evaluation: January 10, 2018

The Trenton site is located in southeastern Edgefield County. Trenton was originally established to monitor for Ozone crossing into South Carolina from Georgia. The Trenton site monitors for Ozone, intermittent $PM_{2.5}$, and continuous $PM_{2.5}$. The sample inlets are 30 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Moncks Corner National Guard

CSA/MSA: none/Charleston-North Charleston MSA
AQS Site ID: 45-015-1002
Location: Airport Drive and Wal Flo Lane
County: Berkeley
Coordinates: 33.18, -80.03
Date Established: PENDING
Site Evaluation: PENDING

The Moncks Corner National Guard site is located in Moncks Corner downwind from the Charleston urban area. This site monitors for Ozone and the monitoring objective is maximum Ozone concentration. The sample inlet is XX meters from the nearest road.

This site will meet 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
This site is expected to be established by the beginning of the 2019 Ozone season.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency
Ozone 44201-1	Urban	Max Ozone Concentration	SLAMS		Ultraviolet Absorption (087)	Continuous

Jenkins Ave. Fire Station

CSA/MSA: none/Charleston-North Charleston MSA
AQS Site ID: 45-019-0003
Location: 4830 Jenkins Ave.
County: Charleston
Coordinates: +32.88228, -79.97755
Date Established: February 14, 1969
Site Evaluation: April 19, 2018

The Jenkins Ave. Fire Station site is located in the city of North Charleston behind a fire station in an urban and central city setting. The Jenkins Ave. Fire Station site supports monitors for PM_{10}, SO_2, and NO_2. The sample inlets are 33.5 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:

The Department is planning on consolidating several of the sites including the Jenkins Ave. Site into a single monitoring site in North Charleston.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency
PM_{10} 81102-3	Neighbor-hood	Highest Concentration	SLAMS	4.15	TEOM-Gravimetric (079)	Continuous

Nitrogen Dioxide 42602-2	Neighbor-hood	Highest Concentration Source Oriented	SPM	4.66	Chemilumi-nescence (599)	Continuous

Cape Romain

CSA/MSA: none/Charleston-North Charleston MSA
AQS Site ID: 45-019-0046
Location: 390 Bulls Island Road (Awendaw)
County: Charleston
Coordinates: +32.94101, -79.65719
Date Established: July 11, 1983
Site Evaluation: April 18, 2017

The Cape Romain site is located in Charleston County at the Cape Romain National Wildlife Refuge (NWR) near Moore's Landing. The Cape Romain NWR is a Class I area about 20 miles northeast of Charleston. The majority of the Refuge area is offshore, extending from Bull Island 20 miles northeast to Cape Romain. The Refuge is bordered on the west by the Intracoastal Waterway. Inland are large tracts of forests with scattered residences. Several miles inland, a primary coastal route, US Highway (Hwy) 17, parallels the coast, with some development along the section of highway that is closest to the Refuge.

The Cape Romain site has continuous monitors for SO_2, NO_2, Ozone, Continuous $PM_{2.5}$, and meteorological parameters. This site also serves as a required regional background for $PM_{2.5}$. The sample inlets are 86 meters from the nearest road.

This site meets siting criteria found in 40 CFR Part 58 Appendix E. The East tree does not meet the requirements for tree height in the 40 CFR Part 58 Appendix E Section 4 (Spacing from Obstructions), but there is still more than 270° unobstructed air flow around the probe.

Changes for 2019:
There are no changes planned for 2019.

Monitors:
(Table continues on next page)

FAA Beacon

CSA/MSA: none/Charleston-North Charleston MSA
AQS Site ID: 45-019-0048
Location: 2670 Elms Plantation Blvd
County: Charleston
Coordinates: +32.98024, -80.06502
Date Established: April 9, 1999
Site Evaluation: April 26, 2017

The Charleston FAA Beacon site is located in Charleston County approximately five miles northwest of the Charleston International Airport near Charleston Southern University. This site has a SPM $PM_{2.5}$ sampler. The sample inlet is 160 meters from the nearest road.

Although the 40 CFR Part 58.20 states that compliance to the siting regulations is optional, it is the Department's intent to meet as many of the Appendix E requirements as possible.

Changes for 2019:
The Department is planning on consolidating several of the sites including the FAA Site into a single monitoring site in North Charleston. The collocated $PM_{2.5}$ was temporarily moved to the T. K. Gregg monitoring site. When the new monitoring site is established, the $PM_{2.5}$ sampler will be moved back to the Charleston-North Charleston MSA.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency
$PM_{2.5}$ 88101-1	Neighbor-hood	Population Exposure	SPM	2.35	Gravimetric (145)	1:1

Charleston Public Works (CPW)

CSA/MSA: none/Charleston-North Charleston MSA
AQS Site ID: 45-019-0049
Location: 360 Fishburne Street
County: Charleston
Coordinates: +32.79097, -79.95871
Date Established: November 20, 1998
Site Evaluation: April 26, 2017

The Charleston Public Works (CPW) site is located on the western side of the Charleston peninsula near downtown Charleston. The CPW site supports the required $PM_{2.5}$ monitors for the MSA. The sample inlets are 24.8 meters from the nearest road.

This site meets siting criteria found in 40 CFR Part 58 Appendix E. The Northeast tree does not meet the requirements for tree height or drip line in the 40 CFR Part 58 Appendix E, but there is still more than 270° unobstructed air flow around the probe. The Department is currently working with the land owners to have the trees obstructions removed or trimmed.

Changes for 2019:
The Department is planning on consolidating several of the sites including the CPW Site into a single monitoring site in North Charleston.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis Method & (Method Code)	Sampling Frequency
$PM_{2.5}$ 88101-1	Neighbor-hood	Population Exposure	SLAMS	2.25	Gravimetric (145)	1:1

York Landfill

CSA/MSA: Charlotte-Concord CSA / Charlotte-Concord-Gastonia MSA
AQS Site ID: 45-091-0008
Location: 310 Langrum Branch Rd.
County: York
Coordinates: +34.9776, -81.2074
Date Established: February 27, 2017
Site Evaluation: February 27, 2018

The York Landfill site is located in south central York County in a rural setting. This site was established to replace the York Continuous Monitoring Site (45-091-0006) and represents background levels near the Charlotte urban area. The York Landfill Site currently operates monitors for Ozone and SO_2. The sample inlets are 34.8 meters from the nearest road

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
This site is a replacement for the York Continuous Monitoring Site (45-091-0006).

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency

Irmo

CSA/MSA: Columbia-Orangeburg-Newberry CSA / Columbia MSA
AQS Site ID: 45-063-0008
Location: 200 Leisure Lane
County: Lexington
Coordinates: +34.051017, -81.15492
Date Established: April 7, 1989
Site Evaluation: November 28, 2017

The Irmo site is located in Lexington County near the Town of Irmo. This site has a sampler for $PM_{2.5}$ and continuous monitors for SO_2 and $PM_{2.5}$. Additionally, this site has samplers collecting Carbonyl and SVOC samples on a 1:6 schedule. The sample inlets are 39 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
The landowner has requested that we relocate the site. We are working with the landowner to secure a new site on the same property. We will submit a request to the EPA to approve the site relocation once it has been identified.

Monitors:
(Table continues on next page)

Cayce City Hall

CSA/MSA: Columbia-Orangeburg-Newberry CSA / Columbia MSA
AQS Site ID: 45-063-0010
Location: 1 830 Morlaine Rd.
County: Lexington
Coordinates: +33.96914, -81.06629
Date Established: December 6, 2007
Site Evaluation: November 28, 2017

The Cayce City Hall site is located in the City of Cayce and measures PM_{10}. This site was established to measure PM_{10} concentrations in populated areas and to determine the potential impact of occasional high concentrations on neighborhoods surrounding the industrialized area. The sample inlet is 24 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency
PM_{10} 81102-1	Neighbor-hood	Population Exposure	SLAMS	2.42	TEOM-Gravimetric (079)	Continuous

Parklane (NCore)

CSA/MSA: Columbia-Orangeburg-Newberry CSA / Columbia MSA
AQS Site ID: 45-079-0007
Location: 8311 Parklane Road
County: Richland
Coordinates: +34.09398, -80.96230
Date Established: April 3, 1980
Site Evaluation: December 19, 2017

The Parklane site is located in north central Richland County within the city limits of Columbia. Parklane was originally sited to provide downwind population exposure measurements at the edge of the Columbia urban area population and has been expanded to support the full complement of NCore parameters. The suite of samplers measure $PM_{2.5}$, speciated $PM_{2.5}$, Lead, precipitation chemistry, precipitation, and SVOC. The suite of continuous monitors measure $PM_{2.5}$, Ozone, SO_2, CO, NO/NO_y. The site also provides support for demonstration, training, and equipment evaluation convenient to the Department's Columbia air laboratory. The sample inlets are 131 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

In 2017, the Bates House (45-079-0019) site, which operated the required collocated $PM_{2.5}$ sampling, was terminated. The collocated $PM_{2.5}$ sampling was moved to Parklane to fulfill duplicate sampling requirements found in 40 CFR Part 58, Appendix A.

Changes for 2019:
There are no changes planned for 2019.

Monitors:
*Bolded parameters are an NCore requirement.

State Hospital

CSA/MSA: Columbia-Orangeburg-Newberry CSA / Columbia MSA
AQS Site ID: 45-079-0020
Location: 2100 Bull Street
County: Richland
Coordinates: +34.01549, -81.03418
Date Established: January 7, 1999
Site Evaluation: November 28, 2017

The State Hospital site is located in Columbia near the intersection of Elmwood Avenue and Bull Street on the grounds of the South Carolina State Hospital. State Hospital has samplers for Carbonyls and SVOC. The sample inlets are 10 meters from the nearest road.

Access to this site may be lost due to recent sale and expected redevelopment of the property.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency
Carbonyls	Middle	Highest Concentration	Non-regulatory	4.2	HPLC Ultraviolet Absorption (102)	1:6
SVOC	Microscale	Highest Concentration	Non-regulatory	4.3	EPA610-EPA625	1:6

Congaree Bluff

CSA/MSA: Columbia-Orangeburg-Newberry CSA / Columbia MSA
AQS Site ID: 45-079-0021
Location: 1850 South Cedar Creek Road
County: Richland
Coordinates: +33.81467, -80.78113
Date Established: December 27, 1999
Site Evaluation: February 8, 2018

The Congaree Bluff site is located in southern Richland County. The site is located in a rural setting within the boundaries of the Congaree National Park. The Congaree Bluff monitoring continues a data record begun in 1981 with the establishment of the Congaree Swamp site (45-079-1006). The original site was established in cooperation with the Department of the Interior and the support of the General Assembly to provide long term monitoring in this unique area. The Congaree Swamp site was located in the flood plain and had to be relocated to the current Congaree Bluff site in 2001. Monitoring activities at this site are intended to represent conditions found in the National Park only. The Congaree Bluff site has monitors for Ozone, SO_2, precipitation, and precipitation chemistry. The sample inlets are 188 meters from the nearest road.

On May 26, 2016, the EPA issued a waiver for 40 CFR Part 58, Appendix E, Section 4-Spacing from Obstructions and Section 11-Summary for tree obstructions. This site meets all other siting criteria found in CFR 40 Part 58, Appendix E. Furthermore, there is a dripline issue with a large long-leaf pine to the east of the monitoring site. The drip line is approximately 7 meters away from the probe inlet. However, the branches of the tree are approximately 80 feet above the probe inlet. Due to the height of the branches and the fact that it is a pine tree (with little surface area for pollutants to collect on the leaves and branches), the Department does not believe that it impacts measurements of ambient air pollutant concentrations.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Sandhill Experimental Station

CSA/MSA: Columbia-Orangeburg-Newberry CSA / Columbia MSA
AQS Site ID: 45-079-1001
Location: 900 Clemson Road
County: Richland
Coordinates: +34.13126, -80.86832
Date Established: January 1, 1959
Site Evaluation: December 19, 2017

The Sandhill Experimental Station site is located in northeastern Richland County, downwind from the Columbia metropolitan area. This site is located in a rapidly urbanizing portion of the city of Columbia. The Sandhill site measures Ozone and NO_2. The sample inlets are 31 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:

County: Florence
Coordinates: +34.21427, -79.76735
Date Established: August 4, 2008
Site Evaluation: April 4, 2017

The Williams Middle School site is located in Florence County. The Department established the Williams site to meet the 40 CFR Part 58 Appendix D requirements for objective, collocated continuous monitoring, and reporting. The Florence MSA has one $PM_{2.5}$ sampler. A collocated continuous monitor is also required to provide timely reporting of concentrations to the public. The sample inlets are 110 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Johnson Controls (3 Sites-JCI Railroad, JCI Entrance, JCI Woods)

CSA/MSA: none/Florence MSA
AQS Site ID: 45-041-8001, 8002, 8003
Location: Liberty Chapel @ Bethel Rd., Liberty Chapel @ Paper Mill Rd., Liberty Chapel @ Paper Mill Rd.
County: Florence
Coordinates: +34.15567, -79.56981; +34.16413, -79.572330; +34.16747, -79.56266
Dates Established: January 4-10, 2012
Site Evaluation: June 1, 2017

Johnson Controls Incorporated (JCI) is located in Florence County. On May 7, 2010, the Department issued an air synthetic minor construction permit to Johnson Controls Battery Group for the Florence Recycling Center (Permit No. 1040-0129-CA). Under a settlement agreement with several petitioners[13], the Florence Recycling Center will conduct source-oriented ambient Lead monitoring at three locations around the facility.
* The JCI samplers are set on a 1:6 sampling schedule. In order to reduce the amount of time that staff must collect the filters, additional samplers have been added to each site. Sampling frequency may be increased if needed for special investigations.

The 40 CFR Part 58.20 states that compliance to the siting regulations is optional, but it is the Department's intent to meet as many of the Appendix E requirements as possible. The JCI Railroad (45-041-8001) site has one sampler. There is also a second sampler that runs consecutively. The JCI Railroad (45-041-8001) site meets 40 CFR Part 58, Appendix E requirements.

The JCI Entrance (45-041-8002) site has two samplers. There is also a third sampler that runs consecutively. The JCI Entrance (45-041-8002) site meets all 40 CFR Part 58, Appendix E requirements.

The JCI Woods (45-041-8003) site has one sampler. There is also a second sampler that runs consecutively. The JCI Woods (45-041-8003) site meets 40 CFR Part 58, Appendix E requirements except Section 4-Spacing from Obstructions and Section 11-Summary siting requirements due to tree obstructions. However, the tree obstructions in the predominant wind direction toward the source have been removed.

Big Creek

CSA/MSA: Greenville-Spartanburg-Anderson CSA / Greenville-Anderson-Mauldin MSA
AQS Site ID: 45-007-0005
Location: 215 McAlister Road
County: Anderson
Coordinates: +34.62324, -82.53206
Date Established: June 4, 2008
Site Evaluation: February 15, 2018

The Big Creek site is located northeast of the City of Anderson. The site was established to represent maximum Ozone concentrations in the Anderson MSA, downwind of Anderson and upwind background for the Greenville MSA. In February 2013, the MSA definitions were changed, and this site is now contained within the Greenville-Anderson-Mauldin MSA. The sample inlet is 43.9 feet from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
In 2019, this site will run concurrently with the Garrison Arena Site and will be terminated after the Ozone season.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency
Ozone 44201-1	Urban	Max Ozone Concentration / Upwind Background	SLAMS	4.1	Ultraviolet Absorption (087)	Continuous

Garrison Arena

CSA/MSA: Greenville-Spartanburg-Anderson CSA / Greenville-Anderson-Mauldin MSA
AQS Site ID: 45-007-0006
Location: Woodburn Road, Pendleton
County: Anderson
Coordinates: 34.63, -82.81
Date Established: PENDING
Site Evaluation: PENDING

The Garrison Arena site is located on the grounds of Clemson University at the T. Ed Garrison Arena near the northern border of Anderson County. This monitor measures Ozone concentrations upwind of the Greenville-Spartanburg urbanized area.

This site is XX.X meters from the nearest road.

This site will meet siting criteria found in 40 CFR Part 58 Appendix E.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Employment Security Commission (ESC)

CSA/MSA: Greenville-Spartanburg-Anderson CSA / Greenville-Anderson-Mauldin MSA
AQS Site ID: 45-045-0015
Location: 133 Perry Avenue
County: Greenville
Coordinates: +34.84389, -82.41458
Date Established: April 11, 2008
Site Evaluation: November 14, 2017

The Greenville ESC site is located in the city of Greenville and was established on April 11, 2008. This site supports a $PM_{2.5}$ sampler and continuous monitoring for $PM_{2.5}$. It also supports PM_{10}, SO_2, NO_2, and measurements for wind speed and wind direction. The sample inlets are 15. meters from the nearest road. The EPA Region 4 has selected this site as one of the locations for a Regional Administrator required NO_2 monitor to help protect susceptible and vulnerable populations, as required by 40 CFR, Part 58, Appendix D, Section 4.3.4.

This site meets siting criteria found in 40 CFR Part 58 Appendix E except Section 4-Spacing from Obstructions. The site has a Site Waiver from the EPA for trees located to the Southeast and Southwest of the site. There is still 270° of airflow around the probes.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Hillcrest Middle School

CSA/MSA: Greenville-Spartanburg-Anderson CSA / Greenville-Anderson-Mauldin MSA
AQS Site ID: 45-045-0016
Location: 510 Garrison Road
County: Greenville
Coordinates: +34.75185, -82.25670
Date Established: February 17, 2009
Site Evaluation: November 14, 2017

The Hillcrest Middle School site represents suburban areas near the interstate corridors in the Greenville MSA. Initiated in 2008, this site was selected as a monitoring location based on results of the Greenville MSA Ozone study. This site supports an Ozone monitor, a $PM_{2.5}$ sampler, and a collocated $PM_{2.5}$ sampler. The sample inlets are 54 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
There are no changes planned for 2019.

Coastal Carolina

CSA/MSA: Myrtle Beach-Conway-North Myrtle Beach, SC-NC MSA
AQS Site ID: 45-051-0008
Location: Century Circle
County: Horry
Coordinates: 33.8007, -78.9939
Date Established: June 27, 2016
Site Evaluation: February 22, 2018

In February 2013, OMB combined Horry County with Brunswick County, NC to establish the Myrtle Beach-Conway-North Myrtle Beach, SC-NC MSA. In order to meet the minimum monitoring criteria in 40 CFR Part 58, Appendix D, at least one Ozone monitor is required in the MSA. In conjunction with the State of North Carolina, local government, and stakeholders, Department established the Coastal Carolina monitoring site to be representative of expected maximum Ozone concentrations in northeast South Carolina. The sample inlet is 18.3 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

North Spartanburg Fire Station #2

CSA/MSA: Greenville-Spartanburg-Anderson CSA / Spartanburg MSA
AQS Site ID: 45-083-0009
Location: 1556 John Dodd Road
County: Spartanburg
Coordinates: +34.98874, -82.07573
Date Established: April 4, 1990
Site Evaluation: November 4, 2017

The North Spartanburg Fire Station #2 site is located in rural Spartanburg County, northwest of the City of Spartanburg. This site supports an Ozone monitor and was established as a maximum Ozone concentration monitor for the Greenville-Spartanburg-Anderson urban area on April 4, 1990. This monitor is designated SLAMS and fulfills the requirement for a maximum concentration site for the Spartanburg MSA. The sample inlet is 92.5 meters from the nearest road.

This site meets siting criteria found in 40 CFR Part 58 Appendix E except Section 4-Spacing from Obstructions. There is a Northwest tree that does not meet the requirements for tree height but there is still more than 270° unobstructed air flow around the probe.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency

T.K. Gregg Recreation Center

CSA/MSA: Greenville-Spartanburg-Anderson CSA / Spartanburg MSA
AQS Site ID: 45-083-0011
Location: 267 Northview Street
County: Spartanburg
Coordinates: +34.95557, -81.92480
Date Established: December 29, 2008
Site Evaluation: November 4, 2017

The T. K Gregg Recreation Center site is located in Spartanburg County. With the cooperation of local government and stakeholders, the Department established this $PM_{2.5}$ site in the downtown Spartanburg area to meet the 40 CFR Part 58, Appendix D requirements for monitoring objective, collocated continuous monitoring, and reporting. This site also supports a collocated $PM_{2.5}$ continuous monitor for the Spartanburg MSA. The sample inlets are 48.2 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
There are no changes planned for 2019. The PM2.5 sampler was moved temporarily to this site to fulfill the collocation requirements. Once the new monitoring site is established in the Charleston-North Charleston MSA, this monitor will be moved back to that MSA.

Monitors:

Chesterfield (NATTS)

CSA/MSA: none/none
AQS Site ID: 45-025-0001
Location: SC Hwy 145, McBee (Route 2 Box 100)
County: Chesterfield
Coordinates: +34.61538, -80.19878
Date Established: January 6, 2000
Site Evaluation: March 22, 2018

The Chesterfield site is located in central Chesterfield County. The Chesterfield site has continuous monitors for $PM_{2.5}$, Ozone, and meteorological parameters. Sampling is done for $PM_{2.5}$ and PM_{10}. This site also serves as the required regional transport site for $PM_{2.5}$. In addition to the CSN protocol $PM_{2.5}$ speciation sampling, this site is a precision site with collocated samplers for PM_{10}. The sample inlets are 43.9 meters from the nearest road.

The Chesterfield site is also a rural National Air Toxics Trends Site (NATTS) which includes Carbonyls, VOC, SVOC, and metals sampling. Federal funding for speciation sampling at this site was eliminated in 2015. Speciation sampling will continue as long as state resources are available. Also, there was a correction in the designation of Continuous $PM_{2.5}$ from SPM to SLAMS.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
There are no changes planned for 2019.

Ashton

CSA/MSA: none/none
AQS Site ID: 45-029-0002
Location: Ashton Road (S-13-18) Islandton
County: Colleton
Coordinates: +33.00784 -80.96504
Date Established: March 7, 1990
Site Evaluation: March 13, 2018

The Ashton site is located in northwestern Colleton County and was established on March 7, 1990. It monitors for concentrations of $PM_{2.5}$ and Ozone. The sample inlets are 8.4 meters from the nearest road.

The 40 CFR Part 58.20 states that compliance to the siting regulations is optional, but it is the Department's intent to meet as many of the Appendix E requirements as possible. This site does not meet 40 CFR Part 58, Appendix E, Section 4-Spacing from Obstructions, Section 5-Spacing from Trees, and Section 11-Summary requirements due to tree obstructions and drip line requirements.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Howard High School #3

CSA/MSA: Myrtle Beach-Conway SC, NC CSA/none
AQS Site ID: 45-043-0011
Location: 594 Gilbert Street
County: Georgetown
Coordinates: +33.36892, -79.29662
Date Established: July 15, 2008
Site Evaluation: March 29, 2018

The Howard High #3 site is located in Georgetown County on the grounds of Howard High School and supports a PM_{10} monitor. PM_{10} monitoring in this area of Georgetown has been ongoing since 1970, when the original Howard High site was established. The sample inlet is 49.7 meters from the nearest road.

This site meets all 40 CFR Part 58, Appendix E requirements.

Changes for 2019:
There are no changes planned for 2019.

Monitors:

Parameter	Scale	Objective	Designation	Probe Height (m)	Analysis & (Method Code)	Sampling Frequency

Long Creek

CSA/MSA: Greenville-Spartanburg-Anderson CSA/ none
AQS Site ID: 45-073-0001
Location: Round Mountain Tower Rd.
County: Oconee
Coordinates: +34.805333, -83.23777
Date Established: August 1, 1983
Site Evaluation: May 2, 2017

The Long Creek site is located on Round Mountain in northwest Oconee County. The Long Creek site was also established as part of the Southern Oxidant Study. It provides a unique vantage point for monitoring the impacts of transported pollutants. Long Creek has continuous monitors for Ozone, SO_2, and $PM_{2.5}$. The sample inlets are 30 meters from the nearest road.

Due to the importance of measuring region-wide SO_2, $PM_{2.5}$, and Ozone concentrations, the unique location, and collocated monitoring activity, the Department has determined that current monitoring at this site should be continued.

The 40 CFR Part 58.20 states that compliance to the siting regulations is optional, but it is the Department's intent to meet as many of the Appendix E requirements as possible. This site does not meet the 40 CFR Part 58, Appendix E requirements. Tree cutting has occurred since the last monitoring plan, improving site exposure. However, there are still trees that the Department needs to evaluate for distance from probe relative to height.

Changes for 2019:
There are no changes planned for 2019.

Network Development

The Monitoring Network provides data to support an array of decisions ranging from development of emissions strategies to protect and improve air quality to the level of activity appropriate for individuals in sensitive populations. To support these varied data users, the network must provide both stable, long-term measures to document trends and rapid reporting of conditions to the public. In response to land use, population, and urban areas growth, the network must be evaluated and adjusted to meet the changing conditions and needs.

The Monitoring Network described in this plan continues to build upon a significant transition from the network that has evolved over the last thirty-five years. It reflects the successes in reducing ambient concentrations of TSP, Lead, CO, NO_2, and SO_2, and the increasing concern about the impact of fine particles and Ozone on public health and the environment.

A series of studies are planned for the major urban areas, as resources permit, to gain better understanding of the air quality, and provide information to improve the monitoring network. In addition to the intensive studies that provide a detailed 'snapshot,' it is intended that SPM sites be established and monitored in rotation to provide regular checks and long term tracking of the trends in air quality in all areas of the state including smaller cities, towns, and rural areas. The implementation of this long term strategy is contingent on sufficient federal funding to support the core-required monitoring and will be developed and evaluated as resources become available. Project plans will be developed for the monitoring and data analysis activity to better define the scope of these strategies prior to implementation. These studies are long term needs the Department has identified and are important tools for evaluating and improving the representativeness of the ambient air monitoring network and our knowledge of air quality in the State.

Areas where long term strategies are being considered include:

- Irmo Monitoring Site – the owner has requested that the Irmo Monitoring Site be moved to another location on the property.

- Charleston Port Monitoring – the Charleston Port Expansion project has a projected completion date now delayed to 2020-2021. The Department will work with local stakeholders to identify and establish an appropriate $PM_{2.5}$ monitoring site to measure ambient pollutant levels before and after port activities commence.

APPENDIX A: Summary of Public Comments Received

Below is a summary of the comments received and the Department's response. A copy of the actual comments (emails and mail) received will be submitted to the EPA Region 4 staff along with the final 2019 Monitoring Plan.

Comments from EPA Region 4: EPA Region 4 stated that the Department needs to provide more site information before EPA would be able to fully evaluate the requested network modifications for Garrison Arena (45-007-0006), Moncks Corner National Guard (45-015-1002), Big Creek (45-007-0005), Clemson (45-077-0002), and Wolf Creek (45-077-0003) monitoring sites. They also recommended that site photos for each monitoring site be available on the Department's web page. Finally, EPA requested to review the site evaluations for each monitoring site.

DHEC Response: The Department will submit to EPA Region 4 an addendum to the 2019 Network Plan that addresses the requested information. Site data from each Site Evaluation is provided in Appendix D: Site Evaluations Summary for CFR 40 Part 58, Appendix E Table and the Site Evaluations will be forwarded to EPA. Also, the Department is currently working to provide site photos of all monitoring sites on the DHEC web page at: https://gis.dhec.sc.gov/monitors/

This page left intentionally blank

APPENDIX B: Termination Requests

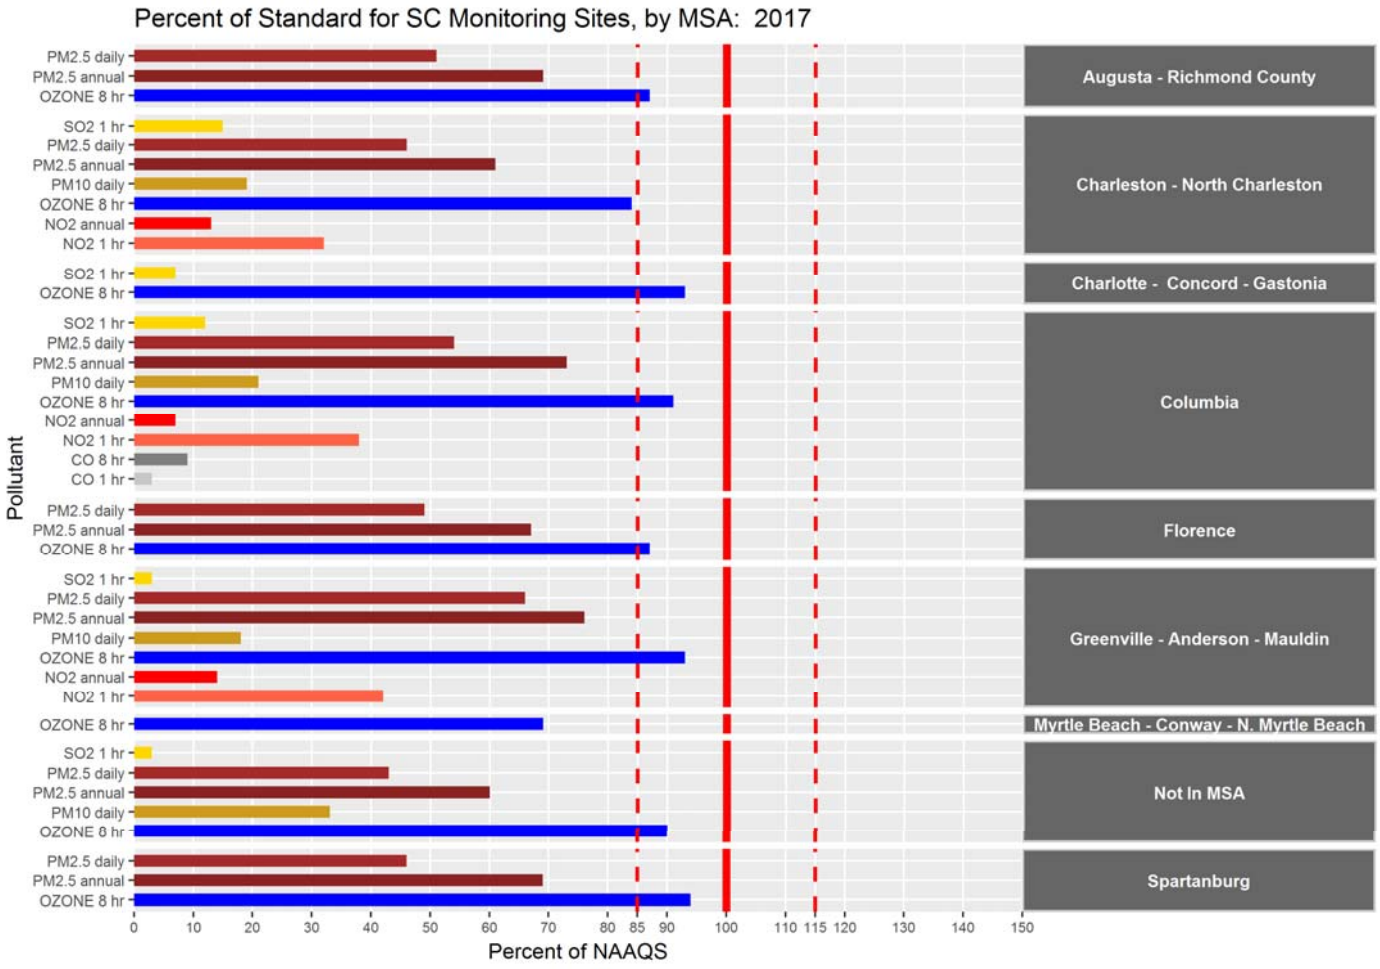
The Table below contains information on the monitoring sites the Department has scheduled for discontinuance.

Site	ID	Date Established	Notes
Clemson	45-077-0002	July 14, 1979	The Department has determined that the Ozone monitoring at this site is duplicative and will be discontinued immediately.
Wolf Creek	45-077-0003	August 10, 2010	The Department has determined that the SPM Ozone monitoring at this site is duplicative. The Department is notifying EPA of the termination of this site at the end of the 2018 Ozone season.

This page left intentionally blank

APPENDIX C: Design Value Graphs

The following graph demonstrates the highest design value for each criteria pollutant in each MSA in comparison with its NAAQS. The MSAs are listed on the far right. Each individual criteria pollutant and averaging time are listed on the far left. The colored bar after the criteria pollutant's name shows the highest 2017 design value. The solid red vertical line is the NAAQS standard. The red dash lines show 15 percent of the Standard (85% and 115%).



This page left intentionally blank

APPENDIX D: Site Evaluations Summary for CFR 40 Part 58, Appendix E Table

Site Evaluations are conducted yearly on each monitoring site to ensure compliance to requirements found in CFR 40 Part 58, Appendix E. After appropriate administrative review, the Site Evaluations are sent to the EPA Region 4. The following tables summarize information about the latest Site Evaluations for each monitoring site.

The first table gives the column number and the shortened Column Name listed in the columns of the second table. It also gives the Section number and the regulatory requirement it represents from the CFR 40, Part 58, Appendix E. The second table lists each monitoring site, their individual criteria pollutant monitors, and the fulfillment and/or measurements of the CFR 40 Part 58, Appendix E requirements. For brevity, the column titles in the second table have been shortened as follows:

Column	Column Name	CFR 40 Part 58, Appendix E Requirements
Column 1:	Site ID, Site Name and Date Visited	Site Identification information and date the Site Evaluation was conducted.
Column 2:	Parameter	Criteria Pollutant
Column 3:	Sampling Train	Section 9. For reactive gases, is sampling train made of borosilicate glass, FEP Teflon® or their equivalent?
Column 4:	Sampling Time*	Section 9. For reactive gases, is sampling time <20 seconds?
Column 5:	Probe Height	Section 2. Horizontal and Vertical Placement: Height from ground to probe must be 2-15 meters
Column 6:	Support Structure	Section 2. Horizontal and Vertical Placement: Is Horizontal and vertical distance from supporting structure >1 meter.
Column 7:	Collocation Placement	Section 11. Horizontal and Vertical Placement: Collocated monitors must be within 4 meters of each other.
Column 8:	Flow Rates	Section 11. Horizontal and Vertical Placement: For PM collocation, flow rates greater than 200 liters/min must be at least 2 meters apart or at least 1 meter flow rates for less than 200 liters/min.
Column 9:	Minor Sources	Section 3. Spacing from Minor Sources: Probe should be away from minor sources.
Column 10:	Obstructions**	Section 4. Spacing from Obstructions: Distance from probe to obstacle must be at least twice the height the obstacle protrudes above the probe.
Column 11:	Airflow	Section 4. Spacing from Obstructions: Must have unrestricted airflow 270 degrees

		around probe.
Column 12:	Dripline	Section 5. Spacing from Trees: Distance from dripline of trees to probe must be <10 meters.
Column 13:	Roadway	Section 6. Spacing from Roadways: Does it meet distance from roadway to probe?

*Sampling Residence Time for all monitors is currently being tested. Only the tests that have been completed as of June 26, 2018 are reported here.

**The monitor is still considered in compliance if the distance from probe to obstacle is not at least twice the height the obstacle protrudes above the probe but there is still 270° of airflow around probe.

APPENDIX G: Memorandum of Agreements and Waivers

DHEC MOA#: 2017-429

MEMORANDUM OF AGREEMENT

ON AIR QUALITY MONITORING FOR CRITERIA POLLUTANTS FOR

THE AUGUSTA - RICHMOND COUNTY

METROPOLITAN STATISTICAL AREA (MSA)

January 2017

Participating Agencies:

Georgia
Georgia Department of Natural Resources
Environmental Protection Division
Air Protection Branch (GA EPD)

South Carolina
Department of Health and Environmental Control (SCDHEC)
Bureau of Air Quality

I. PURPOSE/OBJECTIVES/GOALS

The purpose of this Memorandum of Agreement (MOA) is to renew the Augusta - Richmond County Metropolitan Statistical Area (MSA) Criteria Pollutant Air Quality Monitoring Agreement between SCDHEC and GA EPD (collectively referred to as the "affected agencies") to collectively meet United States Environmental Protection Agency (EPA) minimum monitoring requirements for particles of an aerodynamic diameter of 10 micrometers and less (PM10), particles of an aerodynamic diameter of 2.5 micrometers and less (PM2.5), and ozone; as well as any other criteria pollutant air quality monitoring deemed necessary to meet the needs of the MSA as determined reasonable by all parties. This MOA will establish the terms and conditions of this collective agreement to provide adequate criteria pollutant monitoring for the Augusta - Richmond County MSA as required by 40 CFR 58 Appendix D, Section 2(e).

II. BACKGROUND

The Augusta - Richmond County MSA consists of the following counties: Burke, Columbia, McDuffie, Lincoln, Richmond, Aiken and Edgefield. GA EPD has jurisdiction over Burke, Columbia, McDuffie, Lincoln, and Richmond Counties in Georgia and SCDHEC has jurisdiction over Aiken and Edgefield Counties, South Carolina. The SCDHEC and GA EPD are required by the Clean Air Act to measure for certain criteria pollutants in the ambient air in the Augusta - Richmond County Metropolitan Statistical Area (MSA). The EPA has established minimum monitoring requirements based on the size of the MSA and the quality of the air in the MSA for PM10, PM2.5, and ozone.

40 CFR 58 Appendix D, Section 2(e) states (in part):

> "...The EPA recognizes that there may be situations where the EPA Regional Administrator and the affected State or local agencies may need to augment or to divide the overall MSA/CSA monitoring responsibilities and requirements among these various agencies to achieve an effective network design. Full monitoring requirements apply separately to each affected State or local agency in the absence of an agreement between the affected agencies and the EPA Regional Administrator."

Currently each air pollution control agency (affected agency) conducts monitoring in its respective jurisdiction and coordinates its monitoring with the other air pollution control agency within the MSA.

III. ROLES AND RESPONSIBILITIES

The parties agree to the following terms and conditions:

- SCDHEC, and GA EPD (the "affected agencies") commit to conducting appropriate monitoring in their respective jurisdictions of the MSA; as needed, to collectively meet EPA minimum monitoring requirements for the entire MSA for PM10, PM2.5, and ozone, as well as any other criteria air pollutant monitoring deemed necessary to meet the needs of the MSA as determined reasonable by all affected agencies. The minimum air quality monitoring requirements (for PM10, PM2.5, and ozone described in 40 CFR 58) for the MSA shall apply to the MSA in its entirety and shall not apply to any sole affected agency within the MSA unless agreed upon by all affected agencies.

- The affected agencies commit to coordinating monitoring "responsibilities and requirements...to achieve an effective network design" regarding criteria air pollutant monitoring conducted in the MSA and commit to communicate unexpected or unplanned changes in monitoring activities within their jurisdictions to the other affected agency. As conditions warrant, the affected agencies may conduct telephone conference calls, meetings, or other

communications to discuss monitoring activities for the MSA. Each affected agency shall inform the other affected agency via telephone or e-mail of any monitoring changes occurring in its jurisdiction of the MSA at its earliest convenience after learning of the need for the change or making the changes. Such unforeseen changes may include evictions from monitoring sites, destruction of monitoring sites due to natural disasters, or similar occurrences that result in an extended (greater than 1 quarter) or permanent change in the monitoring network. At least once a year in the second quarter of the year or before June 15th, each affected agency shall make available to the other affected agency, a copy of its proposed monitoring plan for its jurisdiction within the MSA for the next year.

- Each party reserves the right to revoke or terminate this MOA at any time and for any reason by giving thirty (30) days written notice prior to the date of termination.

IV. LIMITATIONS

A. All commitments made in this MOA are subject to the availability of appropriated funds and each party's budget priorities. Nothing in this MOA, in and of itself, obligates SCDHEC or GA EPD to expend appropriations or to enter into any contract, assistance agreement, interagency agreement or other financial obligation.

B. This MOA is neither a fiscal nor a funds obligation document. Any endeavor involving reimbursement or contribution of funds between parties to this MOA will be handled in accordance with applicable laws, regulations, and procedures, and will be subject to separate subsidiary agreements that will be effected in writing by representatives of the parties.

C. Except as provided in Section III, this MOA does not create any right or benefit, substantive or procedural, enforceable by law or equity against SCDHEC or GA EPD, their officers or employees, or any other person. This MOA does not direct or apply to any person outside SCDHEC or GA EPD.

V. PROPRIETARY INFORMATION AND INTELLECTUAL PROPERTY

No proprietary information or intellectual property is anticipated to arise out of this MOA.

VI. POINTS OF CONTACT

The following individuals are designated points of contact for the MOA:

GA EPD: DeAnna Oser
GA EPD Ambient Monitoring Program
4244 International Parkway, Suite 120
Atlanta, GA 30354

DeAnna.Oser@dnr.ga.gov
Voice: (404) 363-7004
FAX: (404) 363-7100

SCDHEC: Micheal Mattocks
SCDHEC Bureau of Environmental Services
8231 Parklane Road
Columbia, SC 29223

mattocm@dhec.sc.gov
Voice: (803) 896-0902
FAX: (803) 896-0980

In the event that a point of contact needs to be changed, notification may be made via email to the other parties.

VII. MODIFICATION/DURATION/TERMINATION

This MOA will be effective when signed by all parties. This MOA may be amended at any time by the mutual written consent of the parties. The parties will review this MOA at least once every 10 years to determine whether it should be revised, renewed, or cancelled. This MOA may be revoked or terminated by an affected agency at any time and for any reason by giving thirty (30) days written notice prior to the date of termination.

MEMORANDUM OF AGREEMENT

ON AIR QUALITY MONITORING FOR CRITERIA POLLUTANTS FOR

THE CHARLOTTE-CONCORD-GASTONIA

METROPOLITAN STATISTICAL AREA (MSA)

July 1, 2016

Participating Agencies:

North Carolina
Department of Environmental Quality (NCDEQ)
Division of Air Quality (NCDAQ)

South Carolina
Department of Health and Environmental Control (SCDHEC)
Bureau of Air Quality

Mecklenburg County, North Carolina
Land Use and Environmental Services Agency
Air Quality (MCAQ)

I. PURPOSE/OBJECTIVES/GOALS

The purpose of this Memorandum of Agreement (MOA) is to establish the Charlotte-Concord-Gastonia Metropolitan Statistical Area (MSA) Criteria Pollutant Air Quality Monitoring Agreement among NCDAQ, SCDHEC, and the MCAQ (collectively referred to as the "affected agencies") to collectively meet United States Environmental Protection Agency (EPA) minimum monitoring requirements for criteria pollutants deemed necessary to meet the needs of the MSA as determined reasonable by all parties. This MOA will renew the terms and conditions of this collective agreement to provide adequate criteria pollutant monitoring for the Charlotte-Concord-Gastonia MSA as required by 40 CFR 58 Appendix D, Section 2(e).

II. BACKGROUND

The Charlotte-Concord-Gastonia MSA consists of

Cabarrus County, NC
Gaston County, NC
Iredell County, NC
Lincoln County, NC
Mecklenburg County, NC
Rowan County, NC
Union County, NC
Chester County, SC
Lancaster County, SC

York County, SC

NCDAQ has jurisdiction over Cabarrus, Gaston, Iredell, Lincoln, Rowan, and Union Counties; SCDHEC has jurisdiction over Chester, Lancaster, and York Counties; MCAQ has jurisdiction over Mecklenburg County.

The NCDAQ, SCDHEC, and MCAQ are required by the Clean Air Act to measure for certain criteria pollutants in the ambient air in the Charlotte-Concord-Gastonia MSA. The EPA has established minimum monitoring requirements based on the size of the MSA and the quality of the air in the MSA.

40 CFR 58 Appendix D, Section 2 (e) states (in part):

> "... The EPA recognizes that State or local agencies must consider MSA/CSA boundaries and their own political boundaries and geographical characteristics in designing their air monitoring networks. The EPA recognizes that there may be situations where the EPA Regional Administrator and the affected State or local agencies may need to augment or to divide the overall MSA/CSA monitoring responsibilities and requirements among these various agencies to achieve an effective network design. Full monitoring requirements apply separately to each affected State or local agency in the absence of an agreement between the affected agencies and the EPA Regional Administrator."

Currently each air pollution control agency (affected agency) conducts monitoring in its respective jurisdiction and coordinates monitoring with the other air pollution control agencies within the MSA.

III. ROLES AND RESPONSIBILITIES

The parties agree to the following terms and conditions:

- NCDAQ, SCDHEC, and MCAQ (the "affected agencies") commit to conducting appropriate monitoring in their respective jurisdictions of the MSA; as needed, to collectively meet EPA minimum monitoring requirements for the entire MSA for criteria air pollutant monitoring deemed necessary to meet the needs of the MSA as determined reasonable by all affected agencies. The minimum air quality monitoring requirements for the MSA shall apply to the MSA in its entirety and shall not apply to any sole affected agency within the MSA unless agreed upon by all affected agencies.

- The affected agencies commit to coordinating monitoring responsibilities and requirements to achieve an effective network design regarding criteria air pollutant monitoring conducted in the MSA and commit to communicate unexpected or unplanned changes in monitoring activities within their jurisdictions to the other affected agencies. As conditions warrant, the affected agencies may conduct telephone conference calls, meetings, or other communications to discuss monitoring activities for the MSA. Each affected party shall inform the others via telephone or e-mail of any monitoring changes occurring in its jurisdiction of the MSA at its earliest convenience after learning of the need for the change or making the changes. Such unforeseen changes may include evictions from monitoring sites, destruction of monitoring sites due to

natural disaster, or similar occurrences that result in extended change (greater than one quarter) or permanent change in the monitoring network. At least once a year in the second quarter or before June 15th, each agency shall make available to the other agency a copy of its proposed monitoring plan for its jurisdiction with the MSA for the next year.

- Each party reserves the right to revoke or terminate this MOA at any time for any reason by giving thirty (30) days written notice prior to the date of termination.

IV. LIMITATIONS

A. All commitments made in this MOA are subject to the availability of funds and each party's budget priorities. Nothing in this MOA, in and of itself, obligates NCDAQ, SCDHEC, or MCAQ to expend funds or to enter into any contract, assistance agreement, interagency agreement, or other financial obligation.

B. This MOA is neither a fiscal nor a funds obligation document. Any endeavor involving reimbursement or contribution of funds between parties to this MOA will be handled in accordance with applicable laws, regulations, and procedures, and will be subject to separate subsidiary agreements what will be effected in writing by representatives of the parties.

C. Except as provided in Section III, this MOA does not create any right or benefit, substantive or procedural, enforceable by law or equity against NCDAQ, SCDHEC, or MCAQ, their officers or employees, or any other person. This MOA does not direct or apply to any person outside NCDAQ, SCDHEC, or MCAQ.

V. PROPRIETARY INFORMATION AND INTELLUCTUAL PROPERTY

No proprietary information or intellectual property is anticipated to arise out of this MOA.

VI. POINTS OF CONTACT

The following individuals are designated points of contact for the MOA:

NCDEQ DAQ:
Joette Steger
NC DENR Division of Air Quality
1641 Mail Service Center
Raleigh, NC 27699-1641

joette.steger@ncdenr.gov

Charlotte, NC 28208-5237

Jeff.Francis@mecklenburgcountync.gov
Phone 704-336-5430
Fax 704-336-4391

In the event that a point of contact needs to be changed, notification may be made via email to the other parties.

VII. MODIFICATION/DURATION/TERMINATION

This MOA will be effective when signed by all parties. This MOA may be amended at any time by the mutual written consent of all parties. The parties will review this MOA at least once every 10 years to determine whether it should be revised, renewed, or cancelled. This MOA may be revoked or terminated by an affected party at any time and for any reason by giving thirty (30) days written notice prior to the date of termination.

STATE OF SOUTH CAROLINA
ADMINISTRATIVE LAWCOURT

Coastal Conservation League and League of Women Voters of South Carolina, Petitioners, vs. South Carolina Department of Health and Environmental Control and Johnson Controls Battery Group, Inc., Respondents.	Docket No. IO-ALJ-07-0477-CC SETTLEMENT AGREEMENT AND ORDER

SETTLEMENT AGREEMENT AND ORDER

This final Settlement Agreement and Order (the "Agreement"), made and entered into by and among Permittee Johnson Controls Battery Group, Inc. ("JCI"), and the League of Women Voters of South Carolina, the Coastal Conservation League ("Petitioners"), and the South Carolina Department of Health and Environmental Control ("DHEC") (each a "Party," and collectively, the "Parties"), is effective upon execution by all of the Parties and approval by the Administrative Law Court (the "Effective Date").

PREAMBLE

1. The DHEC staff issued to JCI a permit known as Air Synthetic Minor Construction Permit No. 1040-0129-CA in order to construct a battery recycling facility in Florence, South Carolina (the "Florence Recycling Center" or "Recycling Center");

2. The Petitioners filed timely requests for final review of DHEC's staff decision to issue the above-referenced permit and a review conference before the DHEC Board was held on April 8, 2010 under Board Docket No. IO-RFR-17;

3. The DHEC Board affirmed DHEC's staff decision to issue the above-referenced permit and issued a written Final Agency Decision in that regard on May 7, 2010;

4. Pursuant to S.c. Code Ann. § 44-1-60, Petitioners have requested a review of the Board's Final Agency Decision with the South Carolina Administrative Law Court as provided therein within thirty days after the receipt of the Final Agency Decision and;

5. The Parties wish to settle this matter and resolve all permitting issues and potential challenges concerning the issuance of Air Synthetic Minor Construction Permit No. 1040-0129-CA without further litigation and the attendant costs of the same.

TERMS AND CONDITIONS

NOW THEREFORE, for and in consideration of the mutual covenants, conditions, promises contained herein, and other valuable consideration, the receipt and sufficiency of which is expressly acknowledged, the Parties agree as follows:

1. Petitioners Will Not Pursue Appeal. As consideration for the covenants provided by ICI and DHEC (as set forth below), Petitioners hereby acknowledge and agree that they will, with consent of this Court, dismiss with prejudice the present action and will not pursue any further challenges of the Final Agency Decision issued by the DHEC Board on May 7, 2010 to the South Carolina Administrative Law Court for the issuance of Air Synthetic Minor Construction Permit No. 1040-0l29-CA.

2. Covenants by ICI and DHEC. As consideration for the covenants provided by Petitioners (as set forth above), leI and DHEC hereby acknowledge and agree;

a. that ICI will support the installation and maintenance of three (3) ambient air quality monitors ("Monitors") for lead located as identified in Attachment A with approximate coordinates provided as follows:

Coordinate System (Datnm)	Longitnde and Latitnde (WGS84)		UTM zone 17 North (NAD83)	
Location	Longitude (Degrees West)	Latitude (Degrees North)	x_proj (meters)	y_proj (meters)
Entrance	-79.572611	34.164083	631567	3781270
Southwest	-79.569833	34.155639	631837	3780337
Northeast	-79.562169	34.167414	632525	3781653

The Monitors will be operated as part of the South Carolina network and consistent with the provisions of 40 CFR Part 58.

b. that ICI will perform all the items identified at Attachment B and will incorporate, at a minimum, the items identified at Attachment B for the control of fugitive and/or dust emissions, in the standard operating procedures manual (SOP) required by condition 28 of Air Synthetic Minor Construction Permit No. 1040-0129-CA.

c. that ICI will provide Petitioners a copy of the standard operating procedures manual required by condition 28 of the Synthetic Minor Construction Permit No. 1040-0l29-CA at the time the proposed SOP is

submitted to DHEC for approval. Petitioners may submit comments to DHEC on the SOP. The Department may consider those comments and may or may not respond to the comments. However, submission of any comments will not trigger any new or additional obligations or permitting requirements for DHEC.

d. that DHEC will establish a web address where monitoring data, stack test protocols and stack test reports as well as DHEC contacts for the ICI Florence Recycling Center will be maintained. DHEC will post monitoring data from the Monitors for the Florence Recycling Center on its web address for the Recycling Center in an expeditious manner after verification of ambient concentration data, a period which should not exceed two weeks from the calculation and verification of ambient concentration data. DHEC will also provide a web link from its web address to a web address maintained by ICI for the Florence Recycling Center. ICI will also maintain monitoring data from the Monitors on its web address for the Recycling Center and will continue to post and maintain verified monitoring data for the most recent twelve month operating period for the life of the operation of the Recycling Center. DHEC and/or ICI will send a notice, in writing and/or electronically, of the existence of the above-web sites to those individuals that submitted written comments on Air Synthetic Minor Construction Permit No. 1040-0129-CA during the formal public comment period.

e. ICI will commence operation of the Recycling Center as follows:

   i. Operations will begin at up to and including 1/2 of the permitted production capacity over the initial 3 months of operation during which time the Monitors will be sampled every three days.
   ii. After the initial three months of operation, if the three month average lead value for each Monitor is at or below 0.075 ug/m^3, production may increase up to full permitted production capacity. ICI shall maintain daily records of mass of lead ingots produced. This information along with monitoring data for the Monitors shall be provided to DHEC and Petitioners at the end of the initial three month period of operation for the initial three months of operation. ICI identifies production data as confidential business information. Nothing in this Agreement shall be interpreted to obligate ICI, or constitute a waiver by ICI, to provide information to DHEC, Petitioners, or to any other parties, any information beyond the agreement to provide the specific information identified in this Agreement to DHEC and Petitioners for the specific time periods addressed. Likewise, nothing in this Agreement shall be interpreted as in any way limiting the rights of DHEC or Petitioners to otherwise request or demand

information from JCI as might be otherwise provided for under applicable permits or otherwise provided for by applicable law.

iii. If after the initial 3 months of operation, the three month average lead value from any Monitor is above 0.075 ug/m^3, JCI will investigate the reason why monitored lead values are higher than projected modeled values. JCI will not increase production rates above 1/2 of permitted production capacity until there is a three month rolling period in which average lead values for all the Monitors are at or below 0.075 ug/m'. If JCI makes a demonstration under the provisions of this subsection (iii), JCI will provide monitoring data to DHEC and Petitioners for the Monitors as well as production data for mass of lead ingots produced for any months relied upon by JCI to demonstrate that its operations satisfy the conditions of this subsection (iii), subject to the same confidentiality reservations identified in (e)(ii) above.

iv. After the facility begins operation at full production capacity as specified above, measurements from Monitors will occur every six days. The Monitors will be operated as part of the South Carolina network and consistent with the provisions of 40 CFR Part 58.

f. that after beginning operation at full production values as specified in paragraph 2(e) above, if any three month rolling average values for lead for any Monitor exceeds the 0.15 ug/m' National Ambient Air Quality Standard (NAAQS) for lead, DHEC will collect samples from that Monitor every three days until such time as there is a three month period in which the average lead value for that Monitor is at or below 0.15 ug/m', at which time sampling will revert to once every 6 days.

3. Enforcement by Parties. Any failure to comply with the conditions of the covenants as stated herein shall be enforceable by any Party to this Agreement.

4. Compromise Agreement. This Agreement is the compromise of disputed claims regarding the appropriateness of the permit issued to JCI. The Parties agree that all statements made in connection with the negotiation or execution of this Agreement shall be subject to Rule 408 of the South Carolina Rules of Evidence.

5. Binding Effect of Agreement. This Agreement shall be binding upon and inure to the benefit of the Parties and each of their respective agents, employees, representatives, officers, directors, principals, attorneys, shareholders, parent and/or subsidiary corporations, affiliates, successors, and predecessors in interest.

6. Assignment. This Agreement shall not be assigned or transferred without the express written consent of all Parties.

7. Entire Agreement. This Agreement embodies the entire agreement of the Parties and supersedes all prior written or oral agreements or understandings between the Parties on the subject matter of this Agreement. Notwithstanding, nothing in this Agreement is intended to alter or reduce the obligations of Permittee under Air Synthetic Minor Construction Permit No. 1040-0129-CA, nor to relieve Permittee of its duty to comply with all applicable laws.

8. Amendments. No amendment, modification, or other variation of any of the terms of this Agreement will be effective unless it is made in a writing signed by the Parties expressly stating that such instrument is intended to amend, modify, or otherwise supplement the Agreement, and then subsequently approved by this Court.

9. Severability. Whenever possible, each provision of this Agreement shall be interpreted so as to be valid under existing law. A finding of invalidity as to any provision of this Agreement or any portion thereof shall void only that provision or portion and no other, and this Agreement shall be interpreted as if it did not contain the invalid provision or portion.

10. Reliance on the Advice of Counsel. Each Party represents that, in the negotiating and drafting of this Agreement, it has been represented by counsel of its choice. Each Party affirms that its counsel has had a substantial role in the drafting and/or negotiating of this Agreement. Therefore, each Party agrees that no rule of construction to the effect that any ambiguities are to be resolved against the drafter shall be employed in the interpretation of the Agreement.

11. Warranty of Authority. The individuals executing this Agreement personally represent and warrant that they have the necessary power and authority to execute this Agreement on behalf of each Party identified as being represented, and that their signatures are sufficient to make this Agreement the binding and enforceable obligation of each Party identified.

12. Choice of Law. This Agreement shall be construed, interpreted, and enforced in accordance with the laws of the State of South Carolina. Any dispute, action, or proceeding arising out of or relating to this Agreement shall be within the exclusive jurisdiction of the South Carolina Administrative Law Court and, if an appeal of a decision of the Administrative Law Court is sought, the State courts of South Carolina. The Parties agree and consent to personal jurisdiction in the foregoing tribunals with respect to any dispute, action, or proceeding arising out of or relating to this Agreement.

13. Counterparts. This Agreement may be executed in any number of counterparts, each of which shall be deemed an original but all of which shall constitute one and the same document. Signatures provided by facsimile or portable document format ("PDF") shall have the same effect as original signatures.

14. Communications. Any written communications required under this Agreement shall be made by mailing a copy of the document to the following addresses:

a. Johnson Controls Battery Group, Inc.
Bernard F. Hawkins, Jr.
Nelson Mullins Riley & Scarborough
Meridian, 17th Floor
1320 Main Street
Columbia, SC 29201

b. Petitioners

Attachment B

Standard Operating Procedures (SOP) Manual -- Minimal Elements for Control of Fugitive and Dust Emission Sources

JCI will perform all the items identified in this Attachment B and will incorporate, at a minimum, the items identified in this Attachment for the control of fugitive and/or dust emissions, in the standard operating procedures manual required by Condition 28 of Air Synthetic Minor Construction Permit No. 1040-0129-CA.

1) Where records are generated under this Attachment, these records will be maintained for at least five years.
2) Processes will be designed with hoods that have face velocities noted below. There will be an initial verification that the hoods meet these face velocities and there will be subsequent verification every two years that the hoods continue to meet these face velocities according to the specifications of 40 CFR 63.547(d). Documentation of the verifications will be kept on file; deviations, if any, will be reported to SCDHEC semiannually. Face velocities will be as follows:
   a) furnace and dryer charging hoppers, chutes, and skip hoists (300 fpm face velocity)
   b) furnace lead taps, and molds during tapping (300 fpm face velocity)
   c) furnace slag taps and molds during tapping (300 fpm face velocity)
   d) refining kettles (250 fpm face velocity)

e) dryer transition pieces (350 fpm face velocity). Pressurized dryer breaching seals at each transition piece allowed as alternative

f) agglomerating furnace product taps (300 fpm face velocity)

3) The battery breaking area will be totally enclosed with initial and subsequent annual verifications that total enclosure criteria are met. Documentation of the verifications will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

4) The furnace area will be totally enclosed and ventilated to control devices with an initial and subsequent annual verification that total enclosure criteria are met. Documentation of the verifications will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

5) The refining and casting area will be totally enclosed and ventilated to control devices with an initial and subsequent annual verifications thattotal enclosure criteria are met. Documentation of the verifications will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

6) The materials storage and handling areas will be totally enclosed and ventilated to control devices. There will be a vehicle wash at each exit with initial and subsequent annual verifications that total enclosure criteria are met. JCI will conduct monthly inspections of vehicle wash equipment to verify proper operation. Documentation of the verifications and inspections will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

7) No source/plant shall use any method of materials handling which will generate fugitive particulate matter that is not fully described in the permit

application. Monthly inspections will be conducted to identify unpermitted material handling operations. Documentation of the inspections will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

8) Volatile organic compounds shall not be used for dust control purposes. Oil treatment is also prohibited. JCI will implement a new material MSDS review process to confirm that VOC-containing dust suppressants are not brought onsite. Records will be kept on file; deviations, if any, will be reported to SCDHEC semiannually.

9) Hoods, scrubbers, fabric filters or other dust cleaning devices will be installed and used where feasible and effective to capture and contain fugitive particulate matter while handling dusty materials.

10) A water slurry will be used to hydraulically transport materials collected by baghouses.

11) Wet vacuum sweeping will occur at plant roadways, twice per day, except on days of natural precipitation.

12) Speed limits will be imposed of not greater than 15 miles per hour for vehicular traffic on plant property.

13) Plant roadways used to deliver raw materials to or remove products from the facility will be paved and earth or other materials deposited by vehicular traffic, earth moving equipment, water erosion or other means, will be promptly removed from paved road surfaces.

14) Daily records will be maintained to verify pavement cleaning. Records of natural precipitation will also be maintained if the natural precipitation

exception (11 above) is used (see attachments). Records will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

15) Negative building pressure ventilation systems will continue to be operated during maintenance activities where dust generation potential exists. Daily records will be maintained to document operation of the building negative pressure ventilation systems to demonstrate consistent negative pressure. Records will be kept on file; deviations, if any, will be reported to SCDHEC semiannually.

16) There will be maintenance and quarterly structural integrity inspections of capture and control systems at all lead emission points *(e.g.,* baghouses, HEPA filters, capture hoods, and ductwork). Records will be maintained to document inspections and maintenance and kept on file, and deviations, if any, will be reported to SCDHEC semiannually.

17) Rain caps will be prohibited on any stack that is a lead emissions source and there will be an initial and subsequent annual verification that rain caps are not being used on such stacks. Documentation of the verifications will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

18) Materials capable of generating fugitive lead-dust will be stored in sealed containers. Examples of such materials include spent filters used in lead control devices and lead-containing waste generated from housekeeping requirements. Monthly inspections will be conducted to identify use of containers that are not sealed. Documentation of the inspections will be kept on file; deviations, if any, will be reported to SCDHEC semiannually.

19) JCI will immediately respond to any identified spills of toxic or hazardous materials. Plant personnel shall walk around the perimeter of the developed facility on a daily basis to inspect for any indication of environmental problems such as spills of any toxic or hazardous materials. Records of inspections will be maintained on file and deviations, if any, will be reported to SCDHEC semiannually.

20) Plant personnel shall inspect on a daily basis, and as necessary, empty and clean out all drums containing Personal Protective Equipment (PPE). Records of inspections will be maintained on file and deviations, if any, will be reported to SCDHEC semiannually.

21) Equipment shall be decontaminated or containerized prior to leaving a ventilated building. Records of inspections will be maintained on file and deviations, if any, will be reported to SCDHEC semiannually.

22) During any structural demolition operations, the material being demolished shall be adequately wetted down to suppress dust generation. Procedures for structural demolition activities will be developed, implemented, and documented.

23) JCI will keep adequate records to verify the following:

a) that housekeeping activities are completed, and that inspection and maintenance of emission collection system(s) and control device(s) are performed, including the name of the person performing the activity, and the dates on which specific activities were completed.

b) that readings are being taken as required from the ambient air lead monitoring stations.

24) Charge preparation furnace hoppers, chutes, and conveyors will be designed with enclosures and/or capture hoods to route the emissions to control devices. There will be an initial verification that the enclosures and/or hoods meet these design criteria and there will be a verification every two years that the enclosures and/or hoods continue to meet these design criteria. Documentation of the verifications will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

25) Rotary furnaces will be constructed with receiving hoods at charge doors, slagging points, tapping points and flue connections to route emissions to control devices. There will be an initial verification that the hoods meet these criteria and verification every two years that the hoods continue to meet these design criteria. Documentation of the verifications will be kept on file and deviations, if any, will be reported to SCDHEC semiannually.

26) Emissions from receiving hoods for all refining kettles will be routed to a control device. There will be an initial verification that the hoods meet this design and verification every two years that the hoods continue to meet this design. Documentation of the verifications will be kept on file; deviations, if any, will be reported to SCDHEC semiannually. The following practices will be included in the design of the facility:

a) All building exterior access doors used for truck traffic will be designed with wind protection. Personnel doors normally used for entrance/exit will be equipped with automatic closure mechanisms and an audible alarm that will sound if the door is open for more than one continuous

minute. Emergency exits will be equipped with an audible alarm that will sound immediately upon opening of the door. Windows will either be of a design that does not allow opening or will be maintained in a closed position at all times. Monthly integrity inspections will be conducted and records will be maintained to verify proper operation of automatic closure mechanisms, alarms, and window position.

b) Floor surfaces within process areas will be paved and there will be an initial verification that the floors are paved.

c) There will be proper staging and disposal of collected materials from vacuuming and wet sweeping equipment. There will be monthly inspections of vacuuming and wet sweeping equipment for proper operation and records of these inspections will be maintained.

d) Raw materials will be moved to charge preparation and finished goods will be handled with use of indoor vehicles only.

e) A central vacuum system will be provided for housekeeping.

f) The storm water management system will be designed to assist in removing lead that may fall on impervious surfaces at the facility.

g) The Recycling Center will be designed to minimize impervious surfaces and to maximize the use of vegetative cover where appropriate.

h) JCI recognizes the benefit of maintaining tree cover on the land adjacent to the plant as a buffer, and JCI will maintain tree cover on land adjacent to the plant consistent with good forestry practices and will remove and/or trim trees only as needed for good forestry management or as needed for current or future development of the property (examples,

including but not limited to, site clearing for buildings, parking lots, loading and unloading areas, entrance and exit ways, roads, monitoring locations and access ways, utility and utility rights of way (such as for power, gas, sewer, communication, etc.), stormwater management systems, rail spurs, etc.). JCI has no intent to clear-cut trees adjacent to the plant or harvest these trees beyond that needed to accomplish the purposes addressed above, and will minimize removal of trees with respect to accomplishing these purposes.

27) The buildings will be constructed with zone ventilation concepts that promote directing any air exchanged between buildings towards the foundry emission control equipment. There will be an initial verification that the building was designed with zone ventilation. Documentation of the verification will be kept on file and deviations, if any, will be reported to SCDHEC in the first semiannual report.

28) All truck openings will be equipped with an interlock system to prevent simultaneous opening of air lock doors. The doors will also be eqUipped with an audible alarm that will sound if a door remains open for more than 5 continuous minutes. Monthly observation of air lock operation and seals will be documented and kept on file; deviations, if any, will be reported to SCDHEC in the first semiannual report.

29) The following provisions will be incorporated into operating procedures and employee training.

a) vehicles and personnel flow patterns will be directed in a manner to minimize the potential for lead being carried from one area of the building to another.

b) entry/exit points will be established so that there are specific areas designated for the distribution, inspection and maintenance of personal protective equipment.

c) Uniforms will be collected at a centralized location and laundered at the facility.

d) There will be vacuum cleaning stations in the facility to facilitate dust removal and good housekeeping.

e) There will be designated changing areas for employees to remove uniforms and/or personal protective equipment prior to leaving the facility.

£) There will be hand wash stations to facilitate employee hygiene.

g) There will be showers to facilitate employee hygiene.

h) There will be a cafeteria to allow employees to eat within the building and minimize exit and entry into the building.

i) There will be footwear wash stations to minimize materials being transported from process areas into other areas of the facility.

30) There will be physical isolation of lead processing areas from adjacent non-lead processing areas. There will be initial verification that the lead isolation is used. Documentation of the verification will be kept on file and deviations, if any, will be reported to SCDHEC in the first semiannual report.

MEMORANDUM OF AGREEMENT

ON AIR QUALITY MONITORING FOR CRITERIA POLLUTANTS FOR

THE MYRTLE BEACH-CONWAY-NORTH MYRTLE BEACH

METROPOLITAN STATISTICAL AREA (MSA)

July 1, 2015

Participating Agencies:

North Carolina
Department of Environment and Natural Resources (NCDENR)
Division of Air Quality (NCDAQ)

South Carolina
Department of Health and Environmental Control (SCDHEC)
Bureau of Air Quality

I. PURPOSE/OBJECTIVES/GOALS

The purpose of this Memorandum of Agreement (MOA) is to establish the Myrtle Beach-Conway-North Myrtle Beach Metropolitan Statistical Area (MSA) Criteria Pollutant Air Quality Monitoring Agreement between NCDAQ and SCDHEC (collectively referred to as the "affected agencies") to collectively meet United States Environmental Protection Agency (EPA) minimum monitoring requirements for ozone, as well as other criteria pollutants air quality monitoring deemed necessary to meet the needs of the MSA as determined reasonable by all parties. This MOA will establish the terms and conditions of this collective agreement to provide adequate criteria pollutant monitoring for the Myrtle Beach-Conway-North Myrtle Beach MSA as required by 40 CFR 58 Appendix D, Section 2(e).

II. BACKGROUND

The Myrtle Beach-Conway-North Myrtle Beach MSA consists of Horry County and Brunswick County. NCDAQ has jurisdiction over Brunswick County and SCDHEC has jurisdiction over Horry County. Brunswick County was previously included in the Wilmington (NC) MSA with New Hanover and Pender Counties. However, the United States Office of Management and Budget revised the geographic delineation in February 2013 to include Brunswick County in the Myrtle Beach-Conway-North Myrtle Beach MSA instead.

The NCDAQ and SCDHEC are required by the Clean Air Act to measure for certain criteria pollutants in the ambient air in the Myrtle Beach-Conway-North Myrtle Beach MSA. The EPA has established minimum monitoring requirements based on the size of the MSA and the quality of the air in the MSA for ozone.

40 CFR 58 Appendix D, Section 2 (e) states (in part):

> "... The EPA recognizes that State or local agencies must consider MSA/CSA boundaries and their own political boundaries and geographical characteristics in designing their air monitoring networks. The EPA recognizes that there may be situations where the EPA Regional Administrator and the affected State or local agencies may need to augment or to

divide the overall MSA/CSA monitoring responsibilities and requirements among these various agencies to achieve an effective network design. Full monitoring requirements apply separately to each affected State or local agency in the absence of an agreement between the affected agencies and the EPA Regional Administrator."

Currently each air pollution control agency (affected agency) conducts monitoring in its respective jurisdiction and coordinates monitoring with the other air pollution control agencies with the MSA.

III. ROLES AND RESPONSIBILITIES

The parties agree to the following terms and conditions:

- NCDAQ and SCDHEC (the "affected agencies") commit to conducting appropriate monitoring in their respective jurisdictions of the MSA; as needed, to collectively meet EPA minimum monitoring requirements for the entire MSA for ozone, as well as other criteria air pollutant monitoring deemed necessary to meet the needs of the MSA as determined reasonable by both affected agencies. The minimum air quality monitoring requirements for the MSA shall apply to the MSA in its entirety and shall not apply to any sole affected agency within the MSA unless agreed upon by all affected agencies.

- The affected agencies commit to coordinating monitoring responsibilities and requirements to achieve an effective network design regarding criteria air pollutant monitoring conducted in the MSA and commit to communicate unexpected or unplanned changes in monitoring activities within their jurisdictions to the other affected agency. As conditions warrant, the affected agencies may conduct telephone conference calls, meetings, or other communications to discuss monitoring activities for the MSA. Each affected party shall inform the other via telephone or e-mail of any monitoring changes occurring in its jurisdiction of the MSA at its earliest convenience after learning of the need for the change or making the changes. Such unforeseen changes may include evictions from monitoring sites, destruction of monitoring sites due to natural disaster, or similar occurrences that result in extend (greater than one quarter) or permanent change in the monitoring network. At least once a year in the second quarter or before June 15th, each agency shall deliver to the other agency a copy of its proposed monitoring plan for its jurisdiction with the MSA for the next year.

- Each party reserves the right to revoke or terminate this MOA at any time for any reason by giving thirty (30) days written notice prior to the date of termination.

IV. LIMITATIONS

A. All commitments made in this MOA are subject to the availability of funds and each party's budget priorities. Nothing in this MOA, in and of itself, obligates NCDAQ or SCDHEC to expend funds or to enter into any contract, assistance agreement, interagency agreement, or other financial obligation.

B. This MOA is neither a fiscal nor a funds obligation document. Any endeavor involving reimbursement or contribution of funds between parties to this MOA will be handled in accordance

with applicable laws, regulations, and procedures, and will be subject to separate subsidiary agreements what will be effected in writing by representatives of the parties.

C. Except as provided in Section III, this MOA does not create any right or benefit, substantive or procedural, enforceable by law or equity against NCDAQ or SCDHEC, their officers or employees, or any other person. This MOA does not direct or apply to any person outside NCDAQ or SCDHEC.

V. PROPRIETARY INFORMATION AND INTELLUCTUAL PROPERTY

No proprietary information or intellectual property is anticipated to arise out of this MOA.

VI. POINTS OF CONTACT

The following individuals are designated points of contact for the MOA:

NC DENR DAQ: Donnie Redmond
NC DENR Division of Air Quality
1641 Mail Service Center
Raleigh, NC 27699-1641

donnie.redmond@ncdenr.gov
Voice/fax: 919-707-8468

SCDHEC: Scott Reynolds
SCDHEC Bureau of Air Quality
2600 Bull Street
Columbia, SC 29201

reynolds@dhec.sc.gov
Voice: 803-896-0902

VII. MODIFICATION/DURATION/TERMINATION

This MOA will be effective when signed by all parties. This MOA may be amended at any time by the mutual written consent of all parties. The parties will review this MOA at least once every 10 years to determine whether it should be revised, renewed, or cancelled. This MOA may be revoked or terminated by an affected party at any time and for any reason by giving thirty (30) days written notice prior to the date of termination.

MAY 26 2016

Ms. Rhonda Banks Thompson
Chief
Bureau of Air Quality Control
South Carolina Department of Health and
Environmental Control
2600 Bull Street
Columbia, South Carolina 29201

Dear Ms. Thompson:

On March 16, 2016, the South Carolina Department of Health and Environmental Control (SC DHEC) notified the U.S. Environmental Protection Agency Region 4 that the comment period had ended for the Network Plan Addendum to the state of South Carolina's 2015 annual ambient air monitoring network plan (Network Plan Addendum). The Network Plan Addendum provided further information and proposed changes to the 2015 annual ambient air monitoring network plan (Network Plan), which was approved with three exceptions by the EPA on November 19, 2015. The Network Plan Addendum was received as two separate documents. One document proposed changes to the SC DHEC monitoring network and the other document requested waivers for monitoring siting requirements.

The EPA understands that the SC DHEC provided the public a 30-day review period for its draft Network Plan Addendum and that no comments were received.

The Network Plan Addendum proposes a number of changes to the SC DHEC's ambient air monitoring network, including:

- shutdown of four ozone (O_3) monitoring sites,
- relocation of one O_3 monitoring site,
- startup of one O_3 monitoring site,
- shutdown of one multipollutant ($PM_{2.5}$ and PM_{10}) site,
- a waiver of siting requirements at an O_3 and SO_2 site, and
- renewal of an existing waiver at a multi-pollutant site.

The EPA approves the requests in the Network Plan Addendum, with the following exceptions:

- The EPA is deferring making a decision on the proposed shut down of the Clemson O_3 site (AQS ID 45-072-0002) in order to allow more time for consideration and discussion with the SC DHEC.
- The EPA does not approve the discontinuation of O_3 monitoring at the Bushy Park Pump Station site (AQS ID 45-015-0002), since this site is required for the Charleston area to meet the O_3 minimum monitoring requirements found in 40 CFR Part 58, Appendix D. The EPA understands that the SC DHEC is currently looking for nearby property to move this monitor to. Once a suitable replacement site is found, the SC DHEC should request a relocation of the Bushy Park Pump Station O_3 monitor.

- The EPA conditionally approves the establishment of the Coastal Carolina O_3 monitoring site, once the SC DHEC has resolved any monitor siting issues. This site will meet the requirements for O_3 monitoring in the Myrtle Beach-Conway-North Myrtle Beach, SC-NC Metropolitan Statistical Area. The SC DHEC should include in the next ambient air monitoring network plan evidence that the Coastal Carolina site meets air monitoring siting requirements found in 40 CFR Part 58, Appendix E.
- The EPA supports the proposed relocation for the York CMS O_3 monitoring site (AQS ID 45-091-0006) to the proposed York O_3 site (AQS ID 45-091-0007). However, the Network Plan Addendum does not provide sufficient information to approve the new location at the proposed York O_3 site. In addition to the information provided in the Network Plan Addendum, the SC DHEC should submit to the EPA information to demonstrate that monitoring siting criteria are met, including: zoomed in aerial photo or a site location map; site photo(s) facing from the site in each direction (N, S, E, W); applicable measurements to any obstructions, trees or roadways; and the proposed probe height for the site.

All of the approved ambient air monitoring network changes, requested in the Network Plan Addendum should also be documented in the next annual ambient air monitoring network plan, due July 1, 2016.

Details regarding the EPA's review of the Network Plan Addendum are provided in the enclosed comments.

Thank you for working with us to monitor air pollution and promote healthy air quality in South Carolina. If you have any questions or concerns, please contact Gregg Worley at (404) 562-9141 or Ryan Brown at (404) 562-9147.

Sincerely,

Carol L. Kemker
Acting Director
Air, Pesticides and Toxics Management Division

2015 State of South Carolina Ambient Air Monitoring Network Plan Addendum
The U. S. EPA Region 4 Comments and Recommendations

This document contains the U.S. Environmental Protection Agency Region 4 comments and recommendations on the state of South Carolina's 2015 ambient air monitoring network plan addendum (Network Plan Addendum). Ambient air monitoring rules, which include regulatory requirements that address network plans, data certification, and minimum monitoring requirements, among other requirements, are found in 40 CFR Part 58.

Proposed Monitoring Discontinuations

The Network Plan Addendum proposes to discontinue five monitoring sites. The EPA is deferring the decision for the proposed shut down of the Clemson O_3 site (AQS ID 45-072-0002), in order to allow more time for consideration and discussion with the SC DHEC on this issue. The EPA acknowledges the discontinuation of O_3 monitoring at the Cowpens (AQS ID 45-021-0002) site, and approves the discontinuation of O_3 monitoring at the Famoda Farms (AQS ID 45-045-1003) site, as well as the discontinuation of $PM_{2.5}$ and PM_{10} monitoring at the Bates House site (AQS ID 45-079-0019). See Table 1 for a summary of these requests with the EPA's comments.

The O_3 minimum monitoring requirements are found in 40 CFR Part 58, Appendix D, Table D-2. These minimum requirements are based on metropolitan statistical area (MSA) boundaries as defined by the U.S. Office of Management and Budget, population estimates from the U.S. Census Bureau for these MSAs, and historical ambient air monitoring data.

Table 1: Monitors Proposed for Discontinuation

AQS ID	Site Name	MSA	Pollutant	Type	Comments
45-072-0002	Clemson	Greenville-Anderson-Mauldin, SC	O_3	SLAMS	Deferred for further discussion with the SC DHEC.
45-021-0002	Cowpens National Battlefield	Gaffney, SC	O_3	SPM	Approval not required for SPM - shutdown acknowledged.[1]
45-015-0002	Bushy Park Pump Station	Charleston-North Charleston-Summerville, SC	O_3	SLAMS	Not Approved. A suitable replacement site should be found in the MSA.
45-045-1003	Famoda Farms	Greenville-Anderson-Mauldin, SC	O_3	SLAMS	Approved
45-079-0019	Bates House	Columbia, SC	$PM_{2.5}$, PM_{10}	SLAMS	Approved. The SC DHEC will lose site access. Collocated $PM_{2.5}$ sampler will be moved to Parklane site (AQS ID 45-079-0007) to meet $PM_{2.5}$ collocation requirements.

[1] The Cowpens National Battlefield O_3 site is in a MSA that meets minimum O_3 monitoring requirements and is classified as a special purpose monitor (SPM). The SC DHEC does not require EPA approval to shut down this monitor since it is a SPM. The EPA acknowledges the discontinuation of this monitor and that the monitoring requirements for O_3 in Appendix D to 40 CFR Part 58 will continue to be met after this monitor is shutdown.

The SC DHEC requested to discontinue O_3 monitoring at the Famoda Farms monitoring site (AQS ID 45-045-1003). The EPA approves the shutdown of this site. The Famoda Farms monitor is one of four O_3 monitors operating in the Greenville-Anderson-Mauldin, SC MSA. This area is required at a minimum to have two O_3 monitors. Additionally, Famoda Farms has consistently recorded lower O_3 concentrations than the Clemson and Hillcrest Middle School monitoring sites, which are also in the Greenville area. The monitoring requirements in Appendix D to 40 CFR Part 58 will continue to be met in the Greenville area after the Famoda Farms monitor is shutdown.

At this time, the EPA does not approve the shutdown of the O_3 monitor at Bushy Park Pump Station. The Charleston MSA would not meet minimum O_3 monitoring requirements if O_3 monitoring at this site were discontinued. At a minimum, the Charleston MSA is required to have two regulatory O_3 monitors and would only have one regulatory O_3 monitor if monitoring at Bushy Park Pump Station were discontinued. The EPA recommends that the SC DHEC find a suitable replacement monitoring location for Bushy Park. In the meantime, the SC DHEC should continue to flag in the Air Quality System (AQS) the Bushy Park Pump Station O_3 data as not meeting siting requirements.

The SC DHEC expects to lose access to the property where the Bates House $PM_{2.5}$ and PM_{10} monitoring site (AQS ID 45-079-0019) is located. For $PM_{2.5}$, the Bates House monitoring has recorded daily and annual $PM_{2.5}$ design values below the national ambient air quality standards (NAAQS) for the last five years. Additionally, $PM_{2.5}$ concentrations recorded at the Irmo site (AQS ID 45-063-0008), which is also in the Columbia, SC MSA, have been typically higher than Bates House. Over the last five years, Irmo has had annual design values higher than Bates House, as well. The PM_{10} levels recorded at Bates House have been well below the applicable standard for more than ten years. The EPA understands that the SC DHEC will move the collocated $PM_{2.5}$ sampler from Bates House to the Parklane site (AQS ID 45-079-0007) to still meet the $PM_{2.5}$ collocation requirements. After the Bates House monitoring site is shutdown and the $PM_{2.5}$ collocation requirements are met by establishing a collocated $PM_{2.5}$ sampler at the Parklane site, the Columbia, SC MSA will still meet monitoring requirements in Appendix D to 40 CFR Part 58 for PM_{10} and $PM_{2.5}$. Thus, EPA approves the discontinuation of monitoring at Bates House.

Proposed Monitor Startups or Relocations

The Network Plan Addendum also proposes to relocate one O_3 monitor and startup one O_3 monitor. See Table 2 for a summary of these requests.

Table 2: Monitors Proposed for Startup or Relocation

AQS ID	Site Name	MSA	Pollutant	Type	Comments
45-091-0006	York	Charlotte-Gastonia-Concord NC-SC	O_3	SLAMS	The EPA supports this relocation to the new site, but requests additional information in the next network plan.
45-051-0008	Coastal Carolina	Myrtle Beach-Conway-North Myrtle Beach, SC-NC	O_3	SLAMS	EPA Conditionally approves site startup. The Myrtle Beach MSA will the meet minimum monitoring requirements once this site is established. Site must meet siting criteria.

In its response to the 2015, Network Plan EPA approved a temporary shutdown of the York CMS monitoring site (AQS ID 45-091-0006). The SC DHEC stated in the Network Plan that it expects to lose access to the site and was looking for a replacement location. The Network Plan Addendum proposes to restart O_3 monitoring at a new site, York (AQS ID 45-091-0007), which is 3.5 miles northeast of the York CMS site. The EPA understands that the York CMS site is currently still operational even though the temporary shutdown was approved, and that The SC DHEC hopes to operate O_3 monitors concurrently at both the York CMS and York sites before discontinuing monitoring at York CMS. The York CMS monitor is an upwind location for the Charlotte-Concord-Gastonia NC-SC Core Based Statistical Area (CBSA) and typically reads lower than the other O_3 monitors in the CBSA. The EPA believes that the proposed York location would be representative of the same air shed as the previous York CMS monitoring site. The EPA supports the proposed location for the York O_3 monitoring site. However, the Network Plan Addendum does not provide sufficient information to fully approve the proposed York O_3 site. In addition to the information provided in the Network Plan Addendum, the SC DHEC should submit to the EPA information to demonstrate that monitoring siting criteria are met including: zoomed in aerial photo or a site location map; site photo(s) facing from the site in each direction (N, S, E, W); applicable measurements to any obstructions, trees or roadways; and the proposed probe height for the site. This information should be included in the next ambient air monitoring network plan.

The Network Plan Addendum proposes to establish a new O_3 monitoring site, Coastal Carolina (AQS ID 45-051-0008), in the Myrtle Beach-Conway-North Myrtle Beach, SC-NC CBSA to meet O_3 minimum monitoring requirements for this area. The SC DHEC provided 2011 Community Multiscale Air Quality (CMAQ) modeling output for this area in the Network Plan Addendum. The CMAQ model output indicates that the proposed Coastal Carolina site is in the area of the maximum predicted O_3 for the CBSA.

During the 2015 EPA technical systems audit (TSA), the EPA staff visited the proposed location for the Coastal Carolina site. The EPA noted that there was a tree dripline within ten meters of the expected monitoring probe location. This configuration would not meet the monitoring siting criteria found in 40 CFR Part 58, Appendix E, Section 5 siting requirements, "Spacing from Trees." The EPA conditionally approves the Coastal Carolina site; however, full approval is withheld until the monitoring siting criteria issue has been resolved. The SC DHEC should provide evidence that the Coastal Carolina site meets the monitoring siting criteria requirements found in Appendix E to 40 CFR Part 58 in the next ambient air monitoring network plan.

Proposed Waivers of Monitor Siting Criteria

The Network Plan Addendum requests one waiver of 40 CFR Part 58, Appendix E siting requirements and the extension of an existing waiver of siting requirements. Table 3 summarizes these requests.

Under 40 CFR Part 58, Appendix E, Section 10, waivers of siting criteria for existing sites can be granted if either of the following criteria are met:

> 10.1.1 The site can be demonstrated to be as representative of the monitoring area as it would be if the siting criteria were being met.

10.1.2 The monitor or probe cannot reasonably be located to meet the siting criteria because of physical constraints (e.g., inability to locate the required type of site the necessary distance from roadways or obstructions).

Table 3: Waivers of Siting Criteria

AQS ID	Site Name	MSA	Pollutant	Type	Comments
45-079-0021	Congaree Bluff	Columbia, SC	O_3, SO_2	SPM	Waiver of siting criteria approved for the identified trees obstructing the monitor. Waiver through 2020.
45-045-0015	Greenville ESC	Greenville-Anderson-Mauldin, SC	SO_2, NO_2, $PM_{2.5}$, PM_{10}, O_3	SLAMS	Existing waiver of siting requirements extended through 2018.

The Network Plan Addendum requests a waiver of monitoring siting requirements for the Congaree Bluff monitoring site (AQS ID 45-079-0021). The objective of the Congaree Bluff site is to measure O_3 and SO_2 within the Congaree National Park boundaries. Within the national park boundaries, this monitor cannot be reasonably located to meet the siting criteria because of physical constraints. The EPA staff visited the Congaree Bluff site on January 25, 2016, and agree that this is the best monitoring location within the park boundaries. However, there are over forty trees surrounding the probe that do not meet the spacing from obstructions discussed in 40 CFR Part 58, Appendix E, Section 4 (a)"… The distance from the obstacle to the probe, inlet, or monitoring path must be at least twice the height that the obstacle protrudes above the probe, inlet, or monitoring path…"

The configuration of obstructing trees is such that the monitor probe siting does not meet Table E-4 of 40 CFR Part 58, Appendix E, Section 11, which states that monitor location "must have unrestricted airflow 270 degrees around the probe or sampler." The Congaree Bluff monitors have 180 degrees of unobstructed airflow due to the obstructing trees.

However, the EPA understands that the SC DHEC has trimmed the dripline of trees so that all tree driplines are no closer than ten meters from the monitoring probes, in order to comply with 40 CFR Part 58, Appendix E, Section 5 siting requirements, "Spacing from Trees." The SC DHEC has taken reasonable steps to meet many of the siting monitoring requirements, and the EPA believes that removing over 40 trees from a national park to meet all of the siting requirements is not necessary.

The EPA waives the requirements of 40 CFR Part 58, Appendix E, Section 4 (a) and Table E-4 to 40 CFR Part 58, Appendix E, Section 11 in regards to the trees identified by The SC DHEC in the Network Plan Addendum for the Congaree Bluff site. This site must still meet all other siting requirements found in Appendix E to 40 CFR Part 58. The EPA waives these specific requirements for a period of five years. This waiver should be re-evaluated in the 2020 South Carolina network assessment.

Similarly, the Network Plan Addendum requests to renew a waiver of siting criteria for the Greenville ESC monitoring site (AQS ID 45-045-0015). In 2009, the EPA granted a waiver of siting requirements for this site based on concurrent monitoring with the previous site. The Network Plan Addendum identifies two trees that are closer than twice the distance between the top of the tree and the height of the monitoring probe. At this time, the tree configuration and spacing at the site is close to meeting siting criteria such that the EPA believes that the monitoring data is representative of data if the siting criteria were met. Also, restrictions at the location prevent a reconfiguration of equipment or removal of trees.

The EPA waives the requirements of 40 CFR Part 58, Appendix E, Section 4 (a) and Section 11 (Table E-4) in regards to the trees identified by the SC DHEC in the Network Plan Addendum for the Greenville ESC site. The EPA waives these specific requirements for a period of two years. The EPA and the SC DHEC will continue to reevaluate the waiver of these requirements and alternative solutions in upcoming ambient air monitoring network plans. The Greenville ESC site must still meet all of the other siting requirements found in Appendix E to 40 CFR Part 58.
