#### Data Notes:

- Zip codes may cross county boundaries
- Data are provisional and subject to change
- Unknown zip codes are cases that were able to be placed in the county, but the zip code level information is currently not available.
- Estimated cases are calculated based on evidence that for every known case of COVID-19, there could be up to 9 people with the virus who remain unidentified in the community.

South Carolina is experiencing widespread transmission of COVID-19. As the state moves from containment strategy to a disease mitigation strategy, there's less focus on the number of individual cases in an area and more focus on limiting overall spread throughout the state. It's important to know:

- There are many people within our communities who have the virus and have never been tested. Undocumented infections often experience mild, limited or no symptoms, which is why they go unrecognized; they can expose a far greater portion of the population to the virus.
- Regardless of the number of reported cases within an area, all South Carolinians should take seriously the recommended precautions for protecting against this disease.
