Introduction

This is the seventh volume in a series of teen pregnancy data books produced by the South Carolina Department of Health and Environmental Control (SCDHEC). Teen pregnancy events in the lives of South Carolina residents over the past decade are documented in this current volume.

Since 1994, SC teen pregnancy data has been presented for four commonly requested age groups of adolescents: 10-14, 15-17, 18-19 and the traditional 14-17.

The Office of Public Health Statistics and Information Services (PHSIS) collects data on pregnancy events (live births, abortions and fetal deaths). South Carolina law requires this data to be reported to SCDHEC; therefore, the statistics presented should be representative of live births, abortions, and fetal deaths that occur among SC residents.

In this report, estimated pregnancies are defined as the number of live births plus the number of abortions plus the number of fetal deaths.

Estimated pregnancies = live births + abortions + fetal deaths

Fetal deaths are defined as fetal deaths that meet the criteria of 20⁺ weeks gestation (length of pregnancy) and/or fetal weight of 350⁺ grams.

Fetal death → 20⁺ weeks gestation and/or
Fetal death → fetal weight of 350⁺ grams

The Office of Research and Statistical Services (ORSS) provides population estimates. These estimates are computed from information available to ORSS; intercensal population (1988-1989, 91-99) should be recognized as estimates. The 1990 population is directly from census data. The 2000 population is adjusted from 2000 census data (for more information see Technical Notes) Rates published in this volume may differ from previous reports due to revised population estimates.

¹ Estimated pregnancies equal total live births plus abortions plus fetal deaths to unmarried 10-14

² Beginning in 1983, abortion statistics contain out-of-state (O-O-S) abortions

³ Estimated Pregnancies, Live Births and Abortions: Rates calculated per 1,000 population

Fetal deaths: Rates calculated per 1,000 live births plus fetal deaths

⁴ Live Births to Unmarried Mothers, Percentage represents percent of all live births to unmarried females 10-14

* Race may not sum to Total due to unknown races.

¹ Estimated pregnancies equal total live births plus abortions plus fetal deaths to females 14-17

² Beginning in 1983, abortion statistics contain out-of-state (O-O-S) abortions

³ Estimated Pregnancies, Live Births and Abortions: Rates calculated per 1,000 population

Fetal deaths: Rates calculated per 1,000 live births plus fetal deaths

⁴ Live Births to Unmarried Mothers, Percentage represents percent of all live births to unmarried females 14-17

* Race may not sum to Total due to unknown races.

¹ Estimated pregnancies equal total live births plus abortions plus fetal deaths to females 18-19

² Beginning in 1983, abortion statistics contain out-of-state (O-O-S) abortions.

³ Estimated Pregnancies, Live Births and Abortions: Rates calculated per 1,000 population
Fetal deaths: Rates calculated per 1,000 live births plus fetal deaths

⁴ Live Births to Unmarried mothers-Percentage represents percent of all live births to unmarried females 18-19

* Race may not sum to Total due to unknown races.

¹ Estimated pregnancies equal total live births plus abortions plus fetal deaths to females 10-19

² Beginning in 1983, abortion statistics contain out-of-state (O-O-S) abortions

³ Estimated Pregnancies, Live Births and Abortions: Rates calculated per 1,000 population

Fetal deaths: Rates calculated per 1,000 live births plus fetal deaths

⁴ Live Births to Unmarried Mothers, Percentage represents percent of all live births to unmarried females 10-19

* Race may not sum to Total due to unknown races.

**TECHNICAL
NOTES**

SECTION VI

Definition of Terms

Abortion: Purposeful termination of pregnancy with intention other than to produce a live born infant or to remove a dead fetus.

Age of Mother: The age of the mother in years at her last birthday.

Estimated Pregnancy: The number of live births plus the number of abortions plus the number of fetal deaths.

Fetal Deaths: Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles. A fetal death is required to be reported if the fetus has completed the twentieth week or more of gestation or weighs 350 grams or more. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Live Birth: The complete expulsion or extraction of a product of human conception from its mother, irrespective of the duration of pregnancy, which after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Marital Status:

Unmarried - a woman who has never been married or who has been widowed or legally divorced in excess of 280 days.

Married - A woman who is married or has been married within 280 days from conception.

Paternity Acknowledgement - gives authorization to list the name of the father by means of an affidavit as required by South Carolina Law, Section 44-63-165. For statistical purposes, paternity acknowledgements are included in the married category.

Residence Data: Data allocated to the place in South Carolina where the person normally resides, regardless of where the event occurred.

Interpretation of Data

Rate Calculations With Small Numbers: There are variations in all statistics which are the result of chance. This characteristic is of particular importance in classifications with small numbers of events where small variations are proportionately large in relation to the base figure.

Race: Information on race of the mother and father is reported on birth and fetal death certificates, and the race of the woman is reported on the abortion form. For statistical purposes, the tables in this report are based on the classification of "White" and "Black and Other". Blacks currently make up 95.8 percent of Black and Other Population of South Carolina.

To be consistent with National Center for Health Statistics and with other states, the Office of Public Health Statistics and Information Services of the South Carolina Department of Health and Environmental Control began utilizing the race of the mother for births in 1990. Abortions and fetal deaths are characterized by the race of the woman for all reported years.

Fetal Death Rates: Beginning in 1993, the fetal death rate calculations were changed to the formula recommended by NCHS which includes fetal deaths plus live births in the denominator. Due to this change, the rates reported in this series will not be identical or comparable to rates reported in previous volumes.

Population Data: With the exception of population data by race and population data for selected age groups of teens, the 2000 Census data, provided by the Office of Research and Statistics (South Carolina Budget and Control Board), were used to calculate the rates in this report. Population data by race and for selected age groups were modified.

Population Data by Race: At the time of this publication, population files released by the U.S. Census Bureau contain data for a "multiple race" category and for single race categories (including an "other/non-Census designated race" category). This presents problems for vital rates from two standpoints: first, these population files contain counts of persons with more than one race and therefore are not compatible with vital statistics numerators which contain information for persons by single race category, second, the population files contain the "other/non-Census designated race" category which is not used to calculate vital statistics rates.

In order to provide rates by single race category of 'white' and 'black and other' for South Carolina vital events, a methodology was developed that would regroup the populations of the race categories, 'multiple race' and 'other/non-Census designated race', into standard single race categories. This methodology was developed jointly by the staff of the Office of Research and Statistics, South Carolina State Budget and Control Board and the staff of the Division of Biostatistics, Public Health Statistics and Information Services, SCDHEC. At the time of this publication, neither modified or bridged files had been issued by the US Bureau of the Census.

Of the 4,012,012 South Carolinians counted in the 2000 Census, approximately one percent (39,950) were included in the 'multiple' race category and another one percent (39,926), in the

‘other/non-Census designated race’ category. The populations of these two race categories were allocated to the standard single race categories by age, gender and county. This allocation was based on the proportional distribution of the population of the standard single race categories within each of these age, gender, county groups.

Population Data for Selected Age Groups: For inter-census years, ORS provides estimated population data for South Carolina by age for five-year age groups. It is assumed that the population within each of these age categories is distributed uniformly through out the age interval. Based on this assumption, the population for females 14-17, 15-17 and 18-19 years is derived, consecutively, as follows – (20% of the female population 10-14 years plus 60% of the female population 15-19 years), (60% of the female population 15-19), and (40% of the female population 15-19). Pregnancy data for these teenagers are published annually in the South Carolina Vital and Morbidity Statistics reports and also in the South Carolina Teen Pregnancy Data Book(s).
